it might be well to keep in mind that although the Board had before it copies of agreements made between the United Mine Workers of America and some coal operators in British Columbia and Alberta, not a tittle of evidence was produced, either by calling the operators or otherwise, to show that these operators were dissatisfied with their agreements because of bad or weak leadership, because of breach of agreement or at all. I think that this Board, which is not a court of law, is entitled to infer exactly the opposite.

And now reference to the specific matters mentioned by Mr. Locke. In connection with what is called the "slow down" at Glace Bay, it seems to me that to the statements made by Mr. Locke there should be added the notorious fact that if it had not been for the United Mine Workers of America, there would have been no production of coal at all. Further, if there was weak leadership on the part of the United Mine Workers of America, it is even more notorious that leadership in other quarters wasn't exactly brilliant.

With respect to the "holiday" on Vancouver Island. It may be notorious that some men stopped work, but it is equally notorious that they soon went back to work when they were advised by union officials of District 18. What happened on Vancouver Island surely shows the strength rather than the weakness of the United Mine Workers of America leadership.

In the third place, reference was made to the captive coal mines strike in the United States. I agree that this is a matter of public notoriety, but the reasons for and the result of the strike is of equal if not greater notoriety. The same questions were in issue as are in issue before this Board, namely, "union recognition" and a "union shop." The men went on strike because the steel companies which owned these mines refused to recognize the union by refusing to enter into agreements with it and, of course, refused a "union shop." An arbitration board was appointed by the President, which consisted of the President of the United Mine Workers of America as the nominee of the men, the President of the U.S. Steel Company as nominee of the operators, and a high official of the Department of Labor as Chairman of the board. That board effectively approved the contention of the men by directing that the captive mine operators and the United Mine Workers of America enter into an agreement the same as the Appalachian agreement, which covered about 90 per cent of the coal industry and which contained a "union shop" clause. It would appear therefore that the proper inference to be drawn from the whole story of the captive mine strike is one of justification of the United Mine Workers of America and condemnation of the steel companies owning the captive mines. Outside of the number of men and operators involved, the captive mine dispute and the dispute before this Board is almost identical. In my opinion, the decision of that Board is a good precedent to follow.

In conclusion, with respect to this item of dispute, may I say that I can see no sufficient reason why the Granby Company should not follow the acknowledged custom of practically every other coal operator, namely, the making of agreements with the United Mine Workers of America, and thereby assist in carrying out the spirit as well as the letter of the principles enunciated by the Dominion Government in Order in Council P.C. 2685.

"Union Shop"

It is apparent that what is asked for is a "union shop" and not a "closed shop." Reference to the clause dealing with this matter as contained in the proposed agreement, as well as to the clauses in the agreements with other British Columbia and Alberta operators proves that the clause becomes effective and operative only after an individual has been employed and starts to work. The operator's labour market is not restricted, controlled or limited.

If the principle of recognition of the Union is accepted, the "union shop" must follow as a natural complement since union recognition would be practically meaningless without the "union shop." The benefit to the men of membership in a strong, powerful union can only be maintained and safeguarded by the "union shop" clause. Of course, since about 99 per cent of the men are already members of the United Mine Workers of America a "union shop" is already in existence, in one sense, and the United Mine Workers of America cannot be charged with seeking a "union shop" clause as an organizing weapon. It is entitled to seek it, however, to confirm and consolidate the position already achieved.

"Check-off"

The Granby Company have never disputed the right of the men to assign monies owing to them to anybody but do dispute the legality of the assignment form (commonly called the "check-off order"). Its legal advisers are of the opinion that these assignments are not valid. I am fully aware of the very high opinion which is held of the legal advice of Mr. Locke and his associates both by members of his own profession and the general public. Nevertheless it appears from the evidence of Mr. Seamen, given on the Prince-

ton Tulameen hearing that he received advice from three different solicitors that this assignment was valid and, as a consequence, his Company recognizes it. I would refer to Tailby v. Official Receiver, 13 App. Cas. 523; In Re B.C. Empire Canners and Ching Dot, 1943 B.C.R. 89; Skipper v. Tucker & Holloway (1910) 2 K.B. 630; Lee v. Friedman, 20 O.L.R. 49; Lynberg v. Tarbox, 9 W.L.R. 347, and Sterling Collieries v. Jones (1924) 3 W.W.R. 955, as a few cases which lend support to the contention that the assignment in question is a valid one. In any event, the question of its legal validity may not be of serious consequence if the Granby Company recognizes it, as Mr. Baily, the Company's General Manager, admitted he knew it to be recognized by the great majority of coal mine operators in British Columbia.

Jurisdiction of the Board

At the outset the Board agreed that the dispute as to wages would not be considered except in so far as evidence directly pertaining to wages might be thought to be indirectly of value with respect to other items of dispute. The Board was unanimous in its decision to follow the directions of the Minister with respect to this, although without this direction I think it quite possible that the Board had jurisdiction to consider and report on this question in any event if it was requested so to do by the Minister.

It was contended by the Granby Company that "union recognition," "union shop" and the "check-off" were not matters of dispute which could be considered by the Board, since they did not fall within the definition of "dispute" contained in the Act. It seems to me that this contention is primarily one to be advanced to the Minister for his consideration when deciding to grant or refuse the Board (Sec. 7 (2)). The Board was granted with a direction that the wage dispute be not an item to be dealt with but nothing was directed with respect to the other items. The Minister undoubtedly had in his mind the precedent referred to above of a Board headed by a high court judge of Ontario considering and making a recommendation on this very question of union recognition.

In addition it was not only admitted by Mr. Baily (pp. 81 and 82), proven by the copies of agreements accepted by the Board when tendered by Mr. Livett, but also of public notoriety that acceptance by Coal Operators of these three things is an established custom and usage not only in British Columbia, but throughout the American continent. This brings the matters squarely within Sec. 2 (d) (vi) of the Act. I am also of the opinion that these matters are included in the terms of the general definition contained in Sec. 2 (d) and would refer particularly to the words "rights" and "privileges."

I would therefore recommend that:

1. The Granby Company enter into an agreement with United Mine Workers of America, District No. 18, to continue for one year or until the cessation of hostilities by Canada, whichever shall be the longest time.

2. The said agreement should contain a clause providing for a "union shop" and recognition of the "check-off" order.

3. The said agreement, subject to any peculiarly local conditions, should be the same or similar to the agreements presently in effect between the United Mine Workers of America and other British Columbia and Alberta Coal Operators.

All of which is respectfully submitted.

(Sgd.) Clarence E. Smith,
Member of the Board.

Industrial Disputes Investigation Act and re *the matter of the dispute between Princeton Tulameen Coal Company, Limited, employer, and its employees, members of Local 7875, United Mine Workers of America, employees.*

My report in connection with the Granby dispute is attached hereto and, having regard to the brief comments to follow, constitutes my report in this matter.

"Union recognition" is the only item of dispute left in the application after the question of wages has been eliminated as being outside the Board's jurisdiction. However, since the question of "union shop" is in fact an acute matter of dispute as is shown by the history of the negotiations and since it was discussed in both the oral and written argument of the parties, my remarks on this question as contained in the Granby report will apply here.

If consideration of this question is thought to be beyond the Board's jurisdiction, I would respectfully suggest that the Minister even now refer the question of "union shop" to the Board under the power granted in Section 23 (2) of the Act. Since the question has been thoroughly discussed and argued before the Board, such a reference might be made retroactive.

The Company already recognizes the "check off" order, having received the advice of three solicitors that it was a valid assignment. Any remarks in the Granby report dealing with this order as such may be considered as surplusage here.

The representative of the Company laid particular stress on the fact that his Company was financially weak and therefore unable to provide admittedly proper equipment for the production of its coal. It appeared that with this proper equipment the output would be increased, roughly, ten times.

It also appeared that this Company, which is indebted to one or more of its principal shareholders for a loan of $70,000 is just able to keep its head above water but no more. The Company's representative suggested that the union recognition with the resultant union shop and possible other matters usually dealt with in United Mine Workers of America agreements might result in the eventual closing down of his mine. This, he argues, would not be in the interest of the Company, the employees or the public.

I cannot see why such a result would follow, but if it would, then I think that the sooner this Company turns over this mine to an operator able to operate it at something like full production the better for everyone concerned, even the shareholders, and particularly for Canada's war effort. It came out in evidence that the Granby Company, an apparently wealthy organization, although owning its own mine, had to buy coal. It might not be amiss to suggest that the strong company and the weak company might make an arrangement not only for their mutual benefit but also for the benefit of the public.

In the result, my recommendations in this case, with the exception of those referring to the check-off order and itself, are the same as in the Granby case.

All of which is respectfully submitted.

(Sgd.) Clarence E. Smith,
Member of the Board.

Industrial Disputes Investigation Act and re *the matter of the dispute between Tulameen Collieries, Limited, employer, and its employees, members of Local 7875, United Mine Workers of America, employees.*

Attached hereto and forming part of this report is my report submitted in the Granby dispute. Having held here, as in the Granby case, that the item of wages was not within the jurisdiction of the Board, the only matter of dispute actually raised by the application is "union recognition." However, since by negotiation, evidence and argument the question of a "union shop" was in fact a matter of dispute, I think the remarks concerning this in the Granby report are applicable. In any event, as stated therein, "union recognition" almost necessarily involves "closed" or "union shop."

My recommendations in this dispute are the same as those in the Granby case, with the exception of the recommendation *re* "check-off" order. The "check-off" is already recognized by the Tulameen Collieries, Limited.

All of which is respectfully submitted.

(Sgd.) Clarence E. Smith,
Member of the Board.

Report of Board in Dispute between Canadian Car and Foundry Company, Limited (Longue Pointe Works), Montreal, P.Q., and Its Employees

A unanimous report was received from the Board of Conciliation and Investigation established in connection with a dispute between the Canadian Car and Foundry Company, Limited, and employees in its Longue Pointe Works, Montreal, P.Q., members of Local 2525, United Steelworkers of America (LABOUR GAZETTE, August, 1942, page 883).

The personnel of the board was as follows: Professor J. C. Cameron, Kingston, Ont., chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. R. H. Calder, K.C., appointed on the nomination of the employees; and Mr. D. A. Paterson, appointed on the nomination of the employer, both of Montreal.

Subsequent to the receipt of the unanimous report of the board the chairman forwarded to the Department a supplementary report signed by Mr. R. H. Calder, K.C., the employees' nominee. In submitting Mr. Calder's supplementary report, the chairman of the board stated that Mr. Calder had signed the main report without qualification.

The texts of the report of the board and Mr. Calder's supplementary report follow.

Report of Board

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Canadian Car and Foundry Company, Limited, employer, and employees in its Longue Pointe Works, Montreal, P.Q., members of Local 2525, United Steelworkers of America, Employees.

The Board of Conciliation and Investigation composed of Mr. D. A. Paterson, nominated by the employer, Mr. R. L. Calder, K.C., nominated by the employees, and Professor

J. C. Cameron, Chairman, appointed by you, has completed its investigation and has the honour to report as follows:—

A. Matters in Dispute Refferred to the Board

The Union claimed to represent the majority of the employees and wished to be recognized by the Company as the sole bargaining agency for the employees.

The Company refused to recognize and deal with the Union as the exclusive agency of the employees for the purpose of collective bargaining.

B. Sittings of the Board

The Board held sittings as follows: At Montreal, September 8, 14, 15 and 22, 1942.

The Company was represented by Mr. G. Walsh, Mr. C. F. Pascoe and Mr. E. F. Viberg; the Union by Mr. R. J. Lamoureux, Mr. I. J. Campbell and Mr. George Sewed.

Spoken and written arguments were delivered by both parties. Verbal and documentary evidence was submitted.

Mr. H. Mockeridge, president of the Association of Employees, Canadian Car and Foundry Company, Longue Pointe, was sworn and gave evidence respecting the formation, activities and membership of the Association and the attitude of the management towards it. William Harold Pretty, machinist, 435 William David Street, Montreal, and George Edward Sewed, labourer, 1874 St. James Street West, Montreal, former employees of the company, also gave evidence on oath respecting the Company's actions in promoting and assisting the Association of Employees.

.....

The following is a history of the events leading up to and following the establishment of this Board as taken from uncontradicted statements presented to the Board.

(1) The United Steelworkers of America, formerly known as the Steelworkers' Organizing Committee, claims that it started to organize the employees of the Canadian Car and Foundry Company at Longue Pointe plant in November, 1941. The Company, however, states that it had no knowledge that the Union was attempting to organize its employees until early in July, 1942.

(2) About the first of June, 1942, the open hearth employees at the Longue Pointe plant went on strike for higher wages.

> "It was pointed out by the management that an increase in the basic wage rate for one department was an impossibility but that if anything along that line were to be done it would require to be done on behalf of the plant as a whole and would require to be sponsored by a responsible labour organization or some such agency. The employees thereupon decided to form an Employee Association, which was done without delay, and on the 8th of June negotiations were opened with the Company designed to lead to an Agreement." (Extract from the Brief presented by the Company, Pages 1 and 2. Neither the date of the strike nor the date on which the employees decided to form an Employee Association was given.)

(3) On July 3, 1942, Mr. R. J. Lamoureux, representative of the United Steelworkers of America, District No. 6, Room 114, 1405 Bishop Street, Montreal, Quebec, advised Mr. C. F. Pascoe works manager of the Longue Pointe plant that the Union had secured a majority of the employees as members and advanced a claim to be regarded as the sole bargaining agency.

(4) On July 9, 1942, Mr. Walsh, director of personnel for the Company, acknowledged Mr. Lamoureux's letter of July 3 to Mr. C. F. Pascoe, stated that the Company had received a similar communication from the Association of Employees of Longue Pointe, and had started negotiations with the Association with the intention of negotiating a collective labour agreement. He stated further that he would be pleased to discuss the matter with Mr. Lamoureux and suggested that Mr. Lamoureux call him by telephone so that a definite appointment could be made.

(5) On July 10, 1942, Mr. Lamoureux telephoned to Mr. Walsh, not to make an appointment, but to advise that he had heard of intimidation within the Longue Pointe plant. Mr. Walsh asked for complete details; Mr. Lamoureux promised to provide them. According to Mr. Walsh, however, no details were ever communicated to him.

(6) On July 13, 1942, Mr. Lamoureux wired the Minister of Labour requesting a government-conducted vote in the plant to decide which organization (i.e. the United Steelworkers of America or the Association of Employees referred to in (4) above) should be regarded as the sole bargaining agency. Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, replied that this could not be done without the consent of the Company since a copy of the payroll would be required as the basis for a voters' list.

(7) On July 14, 1942, the Union made application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The Board was not granted immediately but Mr. Bernard Rose, an Industrial Disputes Inquiry Commissioner, was instructed by the Department of Labour to make a preliminary investigation into the dispute.

Following the inquiry by Mr. Rose, and at his suggestion, on July 27, 1942, Department

of Labour officials (Messrs. J. S. McCullough and Bernard Wilson) conducted a vote.

The questions submitted to the employees were as follows:—

"Do you wish to be represented in negotiations with the Canadian Car and Foundry Co. Ltd., Longue Pointe plant by:—

The Association of Employees of Longue Pointe	Yes	
	No	
United Steelworkers of America Local 2525	Yes	
	No	

(8) The results of the ballot were as follows:

Number of employees eligible to vote	1,922
Number of employees who voted for the Association of Employees at Longue Pointe	756
Number of employees who voted for United Steelworkers of America, Local 2525	979
Number of spoiled ballots	19

(9) Following the announcement of the result of the plebiscite, the Company, in view of the small majority vote in favour of the United Steelworkers of America, refused to discuss an agreement in which the United Steelworkers of America would be recognized as the sole collective bargaining agency. At a meeting held in Mr. Bernard Rose's office, the Company, through Mr. Walsh, insisted that since the Association of Employees had the support of a relatively large number of employees, it had also a right to an agreement. Mr. Walsh proposed a dual agreement covering the whole plant and expressed the belief that, if the Company dealt exclusively with the Union, the members of the Employees' Association would go on strike. Mr. Walsh's proposal was rejected by the Union representatives who suggested that the matter be referred to a Board of Conciliation and Investigation and that the parties involved agree in advance to accept the recommendation of the Board as final and binding.

The Union's suggestion was rejected both by the Company and by the Association of Employees, through its president, Mr. H. Mockeridge.

(10) A Board of Conciliation and investigation under the Industrial Disputes Investigation Act was established by the Minister of Labour on August 6, 1942, but the personnel of the Board was not completed until August 28, 1942.

(11) Mr. Lamoureux reported the attitude of the Company and of the Association towards an agreement at a general meeting of the Union on August 6, 1942 The members immediately declared a strike, although they were warned by Mr. Lamoureux that such a strike would be illegal and that they could not expect to draw strike pay.

(12) On August 7, 1942, approximately 835 employees refused to enter the plant, in protest against the action of the Company and the Association of Employees.

(13) The Company waited for a period of seven days to find out whether the strikers were prepared to return to work, during which time negotiations were opened by the Company with Union leaders in an endeavour to end the strike. During the seven-day period some 300 of the 835 strikers did return to work. The remaining 535 were in due course paid off by the Company and their employment with the Company terminated. Some of these men have since been re-hired but a total of 413 have not re-entered the Company's service.

The Company was able to replace all the men who left very quickly and the production of the plant at no time dropped more than a few points below capacity.

(14) On August 27, 1942, the Company entered into a written agreement respecting wages, hours of labour and other working conditions with the Association of Employees, Canadian Car and Foundry Company, Longue Pointe plant. This agreement, which is retroactive to June 13, 1942, was made under The Professional Syndicates Act, R.S.Q., 1941, chapter 162, and has been approved by the Regional War Labour Board for the Province of Quebec.

The agreement among other things provided for a general wage increase and certain changes in hours of labour.

(15) On September 15, 1942, the Company informed the Board of Conciliation and Investigation that it was no longer prepared to sign an agreement with the United Steelworkers of America.

> "It has concluded an agreement with the Employees' Association and it had no reason to believe that one agreement is not sufficient and should not amply take care of all labour problems within the plant. . . In point of fact, at the present time it does not consider that Local 2525 of U.S. of A. has sufficient authority to intercede with the Company on behalf of certain workmen within the plant. . . The Company considered that it did everything that was humanly possible to accommodate the wishes of the U.S. of A., but its proposals were rejected, and having been rejected it does not think that at the present time any good purpose can be achieved by re-submitting such proposals for acceptance of a U.S. of A." (Extract from the Brief presented by the Company, Page 5).

(16) On the morning of September 22, 1942, Mr. H. Mockeridge, President of the Associa-

tion of Employees, Canadian Car and Foundry Company, Longue Pointe, gave evidence respecting the formation of the Association, its membership, and the part played by the Company in its formation.

The witness stated that the Company, at the request of the employees themselves, has, on several occasions, given information and advice respecting the formation of an Employees' Association but had not suggested to the employees that such an organization be formed. He further testified that the Company had not exerted pressure on the employees to join the Association; that membership in the Association had been voluntary and was not at any time a condition of employment; that the officials of the Company had not tried to induce or persuade new employees to become members.

Mr. Mockeridge also gave the following testimony:

(a) The Association petitioned the provincial secretary of the Province of Quebec for incorporation under The Professional Syndicates Act on July 13, 1942. The Association was legally incorporated on August 24, 1942.

(b) On September 15, 1942, the last date for which figures were available, the Association had a membership of 1,850 and had collected fees from approximately 1,000 members;

(c) The total number of employees at Longue Pointe plant is approximately 2,200.

(17) On the afternoon of September 22, 1942, Messrs. W. H. Pretty and G. E. Sewed were examined at length by the members of this Board respecting the attitude of the Company towards the Association of Employees.

The evidence given by both these men was to the effect:

(1) that the Company had fostered and encouraged the formation of the Association of Employees from its beginning;

(2) that the Company had given four representatives of the Association financial assistance, either in the form of a loan or as a direct gift, to enable them to go to Quebec City to make arrangements for the incorporation of the Association;

(3) that but for the Company's interest and active support the Association would not have prospered, since the majority of the employees had begun to feel that it could never become an effective agency for collective bargaining.

On the other hand, the witnesses testified that the Company had not encouraged the employees to join the Union. No conclusive evidence was presented to the Board, however, by either witness, respecting discrimination by the Company against Union members.

Mr. R. J. Lamoureux charged that the Company had discriminated against a number of employees, either because they were not members of the Association or because of their Union activities. Mr. Lamoureux's testimony, however, was unsupported by evidence other than that shown in Appendix B.

Before stating its recommendations the Board would like to make certain observations:

(1) The strike which occurred at the Longue Pointe plant of Canadian Car and Foundry Company, Limited, on August 7 appears to have been illegal under Sections 57 and 58 of the Industrial Disputes Investigation Act which read as follows:

"It shall be unlawful for any employer to declare or cause a lockout, or for any employee to go on strike, on account of any dispute prior to or during a reference of such dispute to a Board under the provisions of this Act . . ." —Section 57 (1).

"Employers and employees shall give at least thirty days' notice of an intended or desired change affecting conditions of employment with respect to wages or hours; and in the event of such intended or desired change resulting in a dispute, it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike, until the dispute has been finally dealt with by a Board, and a copy of its report has been delivered, through the Registrar to both the parties affected."—Section 58 (1).

(2) The action of the employer in entering into an agreement with the Association of Employees is of questionable legality. Section 58 (2) of the Industrial Disputes Investigation Act reads as follows:

"The application for the appointment of a Board shall be made by the employers or employees proposing the change in wages or in hours; neither of those parties shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute."

See also Section 58 (1) quoted above.

(3) The Association of Employees is properly constituted under the provisions of The Professional Syndicates Act, R.S.Q., 1941, chapter 162. The Association has authority under the statute cited to enter into a collective labour agreement on behalf of its members with the employer. In view of the provisions of Section 58 (2) of The Industrial Disputes Investigation Act, however, the action of the Association in entering into an

agreement with the employer on August 27, 1942, is of questionable legality.

(4) The Quebec Regional War Labour Board has accepted the collective agreement entered into between the Association of Employees and The Canadian Car and Foundry Company, Limited. In accepting this agreement the Regional War Labour Board allowed a general increase in wages and changes in hours—matters with which it is legally competent to deal under Order in Council P.C. 5963.

(5) The Board is convinced that the Association of Employees, Canadian Car and Foundry Company, Longue Pointe, now represents the majority of the employees and that the United Steelworkers of America, Local 2525, is no longer able to support its contention that it speaks for the majority. In other words, the result of the plebiscite conducted on July 27, 1942, does not indicate the present wishes of the employees with respect to a collective bargaining agency.

Moreover, the members of the Association of Employees are legally bound under the provisions of The Professional Syndicates Act by the existing agreement until its expiry on June 13, 1943 (Section 22).

C. THE RECOMMENDATIONS OF THE BOARD

The Board is faced with the following facts:

1. The Association of Employees has a membership of approximately 90 per cent of the employee group.
2. The Association of Employees is a legally constituted body and has entered into an agreement with the employer.
3. The Regional War Labour Board has approved certain changes in wages and hours which are incorporated in the collective labour agreement.

The question whether the course of events which has led to the present situation is the result of legal or illegal actions is now irrelevant to the existing situation. The Board has to deal with the situation as it now stands. The union is no longer able to claim that the majority of the employees wish to be represented by it in negotiations with the Company.

The Board considers that it would be impractical for the Company to enter into an agreement with the United Steelworkers of America, Local 2525, on behalf of those union adherents who are not members of the Association of Employees and recommends that the existing collective labour agreement be regarded as final and binding until June 13, 1943, the date of expiry.

Supplementary Report of The Employees' Representative

To the Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Canada.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Canadian Car and Foundry Company, Limited, employer, and employees in its Longue Pointe Works, Montreal, P.Q., members of Local 2525, United Steelworkers of America, employees.

I concur in the recommendation of the Board, contained in the report drafted by the chairman at the request of the other members. This concurrence is predicated upon the proposition that the Board's decision must be governed by the circumstances existing at the time of the hearing instead of the circumstances at the time conciliation proceedings were prayed for. This proposition was questioned by the Union at the hearing, and would not hold if mooted before an ordinary Court. In the situation of the parties at the time of the hearing no other conclusion could be reached than the one set forth in the report.

But the Board is also charged with investigation. Surely this must include a discovery of the acts of the parties by which the situation was created. I believe it my duty, therefore, to lay more stress than the Board has upon some of these acts.

1. The United Steelworkers of America began to organize the plant in November 1941 (Brief for the Union). This is not contradicted, though Mr. Walsh, the Company's Director of Personnel, avers that the Company was not aware of it.

2. By July, 1942, organization had progressed sufficiently to justify a request to have the Union recognized as the sole bargaining agency for the employees of the plant, especially as no other organization appeared to

have entered the field. On July 3rd, the United Steelworkers of America advised the Company in writing, advancing that claim. On July 9th Mr. Walsh replied that the Company had received a similar communication from the "Association of Employees of Longue Pointe Plant", and was already negotiating with that body. (Brief for the Union.)

3. This is how the Association of Employees of Longue Pointe Plant came to be formed:

(*a*) Trouble having arisen in one of the departments of the plant, the employees in that department struck for higher wages. Thereupon the management suggested that an increase of wages in one department only was an impossibility, that anything along this line would have to be done on behalf of the whole plant, and that the request would have to be sponsored by a responsible labour organization. (Brief for the Company.)

(*b*) A meeting was called, according to the testimony of Mockeridge, Pretty and Sewed, taken together, in this fashion. The foreman in each department chose two delegates, on an undisclosed principle of selection, who were told to attend a meeting, the purpose of which was not revealed to them. At that meeting, Mr. Walsh advised the delegates chosen to organize for the purposes indicated. He made the further suggestion that they might well be guided in organizing by a gentleman who had helped to set up an Association of Employees in the Turcot plant of the Company. (Verbal statement of Mr. Walsh.) That organization was evidently agreeable to the Company.

(*c*) On their return to their respective departments some of the delegates refused to act further, because they had been selected and not elected by their fellow employees. (Sewed, Pretty.) Elections were held to replace them, and a committee was thus set up.

(*d*) Apparently the process of organizing the Association dragged. To hasten it along a delegation of four was sent to Quebec, bearing the memorandum of association, and for the purpose of personally interviewing the competent provincial officer. Upon the undersigned pointing out that all such incorporations were made by correspondence, a representative of the Company stated that where haste was essential a personal intervention was useful. (Sewed, Pretty.)

(*e*) Though it was not actually stated who suggested the delegation to Quebec, the conclusion that it was the Company is irresistible. Pretty and Sewed say that they were told to go to the pay-wicket where they drew ten dollars each for undenominate expenses, transportation and meals on the steamer having been arranged by Mr. Walsh, who went to Quebec with the delegation and introduced it to the proper official. Both these witnesses assert that the ten dollars was handed to them without their having asked for it.

4. In all negotiations prior to and during the Maverick strike which United Steelworkers of America Local 2525 subsequently declared, the Company played off the Association against the Union, for the stated reason that it would be undemocratic to do otherwise. In most of the conferences which should have been held between the Company and the Union, the Association sat in and all objections were made by it. It was the refusal of the Association to abide the result of a vote that led to the first break. The existence of the Association was put forward as an obstacle to the creation of an exclusive bargaining agency. The proposition that a dual bargaining agency should be set up was made by the Company because of that existence. In the circumstances an acceptable offer would have been to recognize the Union and the Association as the exclusive bargaining agency in those departments in which they had respectively scored a majority.

5. The expenses of the delegation, Mr. Walsh stated, were chargeable to, and reimbursable by the Association of Employees, but though the Association professes to be in funds these had not been reimbursed up to the time the board sat, because they had not been billed by the Company to the Association. (Mockeridge.)

6. The witness Sewed states that, when the question of dues to be paid to the Association came up during the organizing period, many of the prospective members demurred, and were told "To forget it." It is sworn however by Mockeridge that dues up to approximately $1,000 have been collected, on a basis of a dollar a year per member. How many members in good standing this represents is uncertain, owing to duplications, (Mockeridge.)

7. When the strike collapsed, the strikers willing to return to work were told that they would have to take the status of new applicants. When they decided to apply they were directed to the Security Office of the plant where they each filled in an application blank. In that office, on that occasion, there were three members of the Association, who, in working hours and by tolerance of the Company pressed upon the applicants for work an application form for enrolment in the Association (Mockeridge). Nothing was said, Mockeridge avers, about membership in the Association being a condition of employment. But anyone who believes that it was not an

implied condition is too credulous for this world.

8. Finally, at a time when a conciliation Board has been granted and was in process of formation, the Company entered into an agreement with the Association and had it sanctioned by the Regional Board. This was in violation of the Industrial Disputes Investigation Act, as the Company must have been well aware. In the conflict of legislation the agreement must probably stand; and this act of the Company renders the Conciliation absolutely impossible.

9. The Maverick strike ordered by Local 2525 is the only act of the Union contributing to the creation of the situation that paralyzes the Board.

CONCLUSION

From all these facts, I for one conclude that the pious hope of Order in Council 2685 has not been fulfilled. The bargaining agency must be one of the employees' choice. In this case the bargaining agency recognized by the Company and contracted with, was one of the Company's own choice and creation. It was the right hand bargaining with the left—a pattern that leads to the defeat of organized labour, and, by contrecoup, increases the bitterness of employer-worker relationship.

Montreal, October 10th, 1942.

Supplementary Report of Board in Dispute between Canadian Car and Foundry Company, Limited (Turcot Works), Montreal, P.Q., and Its Employees

A supplementary report was received during the month from the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Car and Foundry Company, Limited, Turcot Works, Montreal, P.Q., and its employees, members of Lodge 712, International Association of Machinists (LABOUR GAZETTE, October 1941, page 1186).

The personnel of the board was as follows: Honourable Mr. Justice Paul Mercier, chairman, appointed on the joint recommendation of the other two members; Mr. James Somerville, appointed on the nomination of the employees; and Mr. D. A. Paterson, appointed on the nomination of the employer. All three reside in Montreal.

It will be recalled that late in June the board submitted its first report signed by the chairman and Mr. Paterson, which recommended against recognition of the union as the collective bargaining agency of the employees concerned. At the same time, Mr. Somerville presented a minority report in which he recommended that the union be recognized (LABOUR GAZETTE, August, 1942, pages 886 to 890).

In August the employees furnished the Minister of Labour with a brief in which they contended that the majority report of the board had not taken into consideration important facts. The Minister therefore decided to reconvene the board for the purpose of giving further consideration to these matters and making a supplementary report (LABOUR GAZETTE, September, 1942, page 1005).

The supplementary report of the board and the supplementary minority report submitted by Mr. Somerville are printed below.

Supplementary Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Parliament Buildings,
Ottawa, Ont.

Re: Dispute between the Canadian Car and Foundry Company Limited and employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists.

SIR,—By directions contained in a letter dated 21st August, 1942, from the Director of Industrial Relations and Registrar of the Industrial Disputes Investigation Act (Mr. M. M. Maclean), the Board of Conciliation appointed by you herein was reconvened and hearings were resumed "to deal further with the above mentioned dispute and particularly to give consideration to the points raised in the aforementioned brief submitted by the employees concerned." The quotation is from the letter referred to.

The brief mentioned was submitted to the Minister of Labour and it sets forth a number of points in regard to which the employees disagreed with the findings contained in the majority report of the Board dated 29th June, 1942—hence the decision that the Board be reconvened for the purpose of giving consideration thereto.

The members of the Board were all re-sworn and numerous sessions of the reconvened Board were held, every opportunity being freely given to each party to the dispute to produce witnesses, evidence of every relevant nature and all statistical documents considered to have a bearing upon the case, the Board instructing in certain instances that specific information be produced in written form.

Mr. E. R. Viberg and Mr. Geo. Walsh again represented the Company and Messrs. A. Villeneuve, Valois and Roussin conducted the proceedings for Lodge 712 of the American Federation of Labour.

The greater part of the brief presented by the Lodge to the Minister of Labour consists of argument against the findings and conclusions and, therefore, against the recommendations of the majority report of the Board of 29th June, 1942, above mentioned. The Board considers, however, that the purpose of the rehearings was to consider new aspects of the situation, new evidence, and information of a pertinent nature not previously presented to the Board, rather than to debate with the Board the merits—or demerits as the Lodge views the situation—of the majority report already referred to.

At the opening session, the Board instructed, at the request of the representatives of the Lodge, the Company to prepare and submit a statement disclosing the number of workmen alternately engaged on car production and on aircraft parts production, and their respective earnings. The statement took the Company ten days to compile, due to the extent of the information called for. Its contents proved, however, that the statement of the Company referred to in the majority report, namely that many workmen were intermittently and alternately employed on car and aircraft parts, was substantially correct. The statement disclosed that 128 men were so engaged, thereby disclosing the difficulty mentioned by the Company, of segregating the hours of employment of such workmen and their earnings. It also established, irrefutably, that a separate agreement with the Lodge would render such workmen subject to *dual* control, they being already subject to the collective labour agreement made law by provincial Order in Council No. 490 mentioned in the majority report—an extremely difficult or impossible situation from the Company's point of view.

The representatives of the Lodge, on Page 3 of their brief, claimed that the strike ballot taken in the Anson Wings Department on 23rd July, 1942, under the supervision of the Department of Labour, had resulted in a vote of 456 in favour of the Lodge as compared with 101 against.

The Company's representatives demanded that proof be submitted by the Lodge that the vote of 456 claimed by it represented a corresponding number of members of the Lodge in good standing and operating in the Anson Wings Department.

The representatives of the Lodge demurred and resisted the demand of the Company, arguing that the information was not usual, not necessary and not important.

The Company's representatives, however, contended that the purpose of the demand was to establish that the Lodge actually possessed organization and membership within the Anson Wings Department.

Complying with the demand of the Company's representatives, the Board directed that the requested proof be made forthcoming in authenticated form.

In due course the Lodge submitted a statement to the effect that it had a certain number of memberships "in the books". The statement, however, failed to supply the information ordered by the Board, and failed to state whether or not such memberships were in good standing or were lapsed.

The Chairman reprimanded the Lodge representatives for refusal to divulge the information instructed to be filed, and pointed out that their attitude on this matter greatly weakened their case. In the opinion of the Board the conclusion is irresistible that the Lodge does not possess more than a handful of memberships in the Anson Wings Department, and that it was therefore acting without authority or justification in invoking the result of the vote mentioned as "establishing beyond all question that Lodge 712 alone is entitled to be recognized as the bargaining agency of the employees"—to quote from the brief petitioning for the reconvening of the Board.

The Lodge presented several witnesses to establish that grievances with conditions did exist. Such witnesses did so testify but not in a manner to indicate resentment on the part of the workmen. The main trouble concerned the existence or non-existence of a Grievance Committee in the Department. On being informed by the Company's representatives that such a Committee did actually exist the witnesses confessed that they had not troubled to find out who the members of the Committee were, and the inference would appear to be that grievances were not of a serious nature. The fact, however, that the members of such Committee were representatives of the Employees' Association undoubtedly is the reason why the witnesses made no endeavour to discover it. It was further established that the witnesses were employees, for the most part, of a few months' standing only, and unsympathetic or opposed to existing arrangements.

The main argument for the Lodge, however, centred on the alleged absence of proper classification within the department, and prolonged debate developed on this aspect of the situation.

The Company submitted and filed with the Board a certified copy of an agreement entered into between it and the "Association of Employees"—Canadian Car and Foundry Company Limited *Aircraft Division*—Montreal, dated 8th August, 1942. This agreement concerns employment in the Company's *complete aircraft Plant* situated within the geographical area known as Turcot, Montreal. Its terms respecting wages and labour conditions are identical to those appearing in the Collective Labour Agreement presently in effect between Lodge 712 and the various other Montreal Aircraft Companies, namely, Vickers, Noorduyn and Fairchild. Among other matters it is complete as to classification, and it has been approved and ratified by the Quebec War Regional Labour Board.

In addition the Company furnished sworn evidence, completely satisfactory to the members of the Board, that it has now established in the Anson Wings Department a similar classification of labour and similar rates of pay (copy whereof is hereto attached for reference purposes if necessary) thereby removing any basis of complaint in that regard.

CONCLUSIONS

The Board is of the opinion that the findings, conclusions and recommendations of the majority report previously referred to should be re-affirmed. The Board considers that, if deemed necessary or desirable the Collective Labour Agreement in the Aircraft Division might be extended to the Anson Wings Department.

Alternatively the Board considers that with the establishment of a similar Classification of Labour and Wage Rates in the Anson Wings Department, the presently existing machinery of enforcement provided by Quebec Order in Council No. 492 should suffice for all practical purposes.

The Board considers that a multiplicity of Agreements within the same Plant governing like operations is undesirable. The Board considers that the Lodge, by its declinature to furnish information specified by the Board, failed to establish its right to apply for a Board of Conciliation as the authorized agency of the Employees.

RECOMMENDATIONS

The Board accordingly recommends that the majority report be reaffirmed and that existing relationships between the Employer Company and its employees be maintained.

We have the honour to be Sir,
Your Obedient Servants,

(Sgd.) Paul Mercier, Chairman,
(Sgd.) D. A. Paterson, Member.

Supplementary Minority Report

Re: Dispute between the Canadian Car and Foundry Company Limited and Employees in its Turcot Works, Montreal, P.Q., members of Lodge 712, International Association of Machinists.

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Honourable Sir.—This supplementary report is not filed with any wish or thought of inciting strike action on the part of Canadian Car employees, the only recourse left them for establishing rights of free citizens to collective bargaining through representatives of their own choosing, free and independent of Company domination or influence as enunciated in Order in Council P.C. 2685, Section 7; but rather for the purpose of emphasizing the necessity for further action by the Government, affording trade unions an opportunity to function orderly, peaceably, yet effectively under wartime conditions and restrictions.

I am in agreement with other members of the Board, that developments taking place during re-convened sittings of the Board, practically clear up all matters in dispute but that of union recognition, regarded by the men as of paramount importance, and vital to any possible settlement.

I cannot, however, agree with conclusions arrived at by majority members of the Board, or in justice follow the line of reasoning advanced in the majority supplementary report, for denying demands of the union for immediate recognition.

Developments throughout the re-hearing may be summarized as follows:—

(1) Statement in letter filed with the Board at its opening session May 19, 1942, over the signature of Mr. E. R. Viberg, Assistant Vice-president of the Company, and re-asserted during the hearings, quote:—

"as previously stated, however, the company *is paying*, and will pay the appropriate rates of wages established by agreement in the district of Montreal for such work on aircraft parts as is done in the Anson Wing Department."

This claim on the part of the Company is utterly refuted by comparing list of employees engaged on aircraft, furnished the Board by the Company upon request, containing name, age, length of service and rating as of June, 1942, Exhibit No. 7, comparing it with similar list compiled as of September, 1942, Exhibit No. 5, in conformity with classifications drawn up by the Department of Labour for the protection of workmen, and incorporated in all aircraft contracts.

Comparison clearly shows that action was only taken to properly classify and rate workmen in conformity therewith, after the men voted in the month of July to strike, and the Board reconvening.

(2) The Company's claim and argument, that many workmen in the Anson Wing Department, being intermittently employed elsewhere in the plant where an existing collective agreement governs operations, made it therefore impractical if not impossible to have a separate agreement for the Anson Wing Department, containing rules and regulations governing operations as in other aircraft plants, was fully exploded by the Company itself, voluntarily offering at the closing session of the Board, to do just that thing by agreement, Exhibit No. 8, not with Lodge 712 however, but with its company controlled employee association, which made no move during the past two years to correct abuses complained of, and finally caused aircraft workers in the plant to seek membership and protection in Lodge 712, International Association of Machinists.

(3) Company's demand for list of good standing members employed in the Anson Department:

The records show that prior to the Board being established, Mr. Viberg filed the following statement in writing with the Department of Labour, quote:—

"If it is the determination of your Department to accede to the request of Lodge 712, in spite of the protest of the Company as herein set forth, it is suggested that a Board of Conciliation be appointed without delay, and *that the vote be dispensed with.*"

A clear admission by the Company that the Lodge was qualified to act for the men.

Official representatives of the Lodge, supported by myself, protested the legality of challenging the standing of the Lodge before the Board at this late stage in proceedings. Objection, however, was overruled by the Chairman, whereupon the Committee spokesman voiced acquiescence under protest.

At the following session, however, the Lodge secretary reported his inability to comply owing to opposition from the members themselves who, after many months of discrimination and indignities inflicted upon them because of their allegiance to the Union, they preferred the risk of prejudicing their case in the eyes of the Chairman, rather than be subjected to further indignities if names were handed in. In lieu thereof, the secretary filed a sworn affidavit certifying to a membership of 321 which was well over a majority in the plant in June when the Board closed its first hearing.

In further corroboration of the Lodge's claim to rightfully represent and act for the men, attention was called to the wording on the ballot voted upon in July under the supervision of an official of the Department of Labour resulting in 456 YES votes and 101 NO.

The question voted upon by secret ballot reads as follows:—

"Do you intend to go on strike unless your employer, the Canadian Car and Foundry Company Limited recognizes Lodge 712, International Association of Machinists, as your bargaining agency for the purpose of executing a collective agreement?"

(4) Intimidation and discrimination: One incident occurring while the Board was actually in session will suffice without stretch of imagination to indicate the length a company will go in its efforts to destroy organization before it becomes well enough established to protect itself and its membership. A man, up in years, who gave testimony as a witness at one hearing, appeared at the following session requesting that he be placed under the protection of the Board. He testified that upon returning to work in the shop he was immediately accosted by the plant superintendent in a threatening manner and told to get out right away if he was not satisfied with the job.

To sum up, workmen cannot defend themselves tied to their jobs as they now are; neither can they go on strike in defence of their rights without suffering general condemnation; therefore, by respecting and accepting these restrictions for the general good in these terrible days, wage earners have claims upon the Government which has the power to guarantee the liberty of workers in organizing free and independent unions, and compelling recognition on the part of some employers who show less concern in co-operating to win the war, than they do in maintaining the old order that brought it about.

Respectfully submitted.

(signed) James Somerville,
Employee Board Member.

Montreal, P.Q.
October 19, 1942.

Report of Board in Dispute between Chrysler Corporation of Canada, Limited, Chatham, Ont., and Its Employees

A unanimous report has been received from the Board of Conciliation and Investigation established to deal with a dispute between Chrysler Corporation of Canada, Limited, Chatham, Ont., and its employees, members of Local 127, United Automobile Workers of America (LABOUR GAZETTE, August, 1942, page 884).

The personnel of the board was as follows: Honourable Mr. Justice J. G. Gillanders, of

the Supreme Court of Ontario, Toronto, appointed on the recommendation of the other two members; Mr. Drummond Wren, also of Toronto, appointed on the nomination of the employees, and Mr. J. A. McNevin, K.C., Chatham, Ont., appointed on the nomination of the employer.

The text of the board's report follows.

Report of Board

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Chrysler Corporation of Canada, Limited, employer, and its employees (Chatham Plant) being members of Local 127, United Automobile Workers of America, employees.

The Board of Conciliation and Investigation appointed by you in this matter held meetings in Toronto and Chatham. At the sittings in Chatham, written submissions were filed by both the applicant Union and the Company, oral representations made and argument heard.

The applicant Union was represented by George Burt, Regional Director of the U.A.W.A.; C. Prince, International representative of the U.A.W.A. and James Bassett, the President of Local 127 U.A.W.A. and an employee of the Company.

The Company was represented by J. B. Aylesworth, K.C., counsel for the Company, A. F. Fuerth, Personnel Manager, R. S. Bridge, Vice President and J. H. Hickey, General Parts and Service Manager.

In view of the provisions of section 42 of the Act it should be noted that Union representatives and the Board consented to and were pleased to have Mr. Aylesworth appear as counsel for the Company.

The dispute in this matter, so far as this Board is concerned, is whether or not the applicant Union should be recognized as the bargaining agency through which the Company should negotiate a collective agreement on behalf of all or some of its employees at its Chatham plant. In the application for the constitution of the Board some question of wage rates is raised, but it was conceded by both parties that any question of wages is not a matter for this Board. The only real question in dispute is one of Union recognition.

The Company's plant where the dispute arises is situated at Chatham, Ontario. It is said to be utilized mainly as a warehouse and the business carried on there consists of receiving, packing and shipping automotive parts. There are some 371 hourly rated employees in the plant. It is said approximately 90 per cent of its employees are members of the applicant Union. Union representatives were prepared to file with the Board union cards of the employee members. There is no rival organization claiming or seeking to represent the employees in the plant as a collective bargaining agent. The Union suggests that if there is any doubt as to it being entitled to represent a substantial majority of the employees concerned, that a vote be taken. The Board thinks this is unnecessary and is satisfied that the Union represents a substantial majority of the employees concerned.

In the course of the hearing several matters were discussed on which brief comment should be made.

(1) That a dispute as to Union recognition is not a dispute within the meaning of The Industrial Disputes Investigation Act. This may be dealt with shortly by saying that in so far as this Board is concerned—the Board being constituted upon the Honourable the Minister of Labour being satisfied that the dispute is one to which the provisions of the Act applies—the question must be dealt with as such.

(2) That there were some irregularities in connection with the organization of employees in the plant which the Union should have controlled, and that this should be considered as a reason for refusing to recognize the applicant Union as a proper bargaining agency. Without expressing any opinion as to what effect might be given to such a contention under other circumstances, the Board did not consider these of sufficient importance to warrant further detailed investigation.

Under all the circumstances the Board respectfully recommends that negotiations be entered into between the Company and the hourly rated employees of its Chatham plant who are members of Local 127 U.A.W.A. with a view to the conclusion of a collective agreement in accordance with the provisions of P.C. 2685, section 7.

The Board appreciates the clear, concise and helpful manner in which both parties presented their submissions.

All of which is respectfully submitted.

(Sgd.) J. G. Gillanders,
Chairman.

(Sgd.) J. A. McNevin,
Member.

(Sgd.) Drummond Wren,
Member.

Dated at Toronto this 22nd day of October, 1942.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1942

FOR the month of October the number of strikes and lockouts recorded, the number of workers involved and the time loss in man working days again showed substantial decreases from the previous month but were slightly higher than for October, 1941. There were 26 strikes on record during October, involving 6,107 workers and causing a time loss of 26,926 days, as compared with 43 strikes in September, 1942, involving 13,316 workers, with a time loss of 37,838 days, and 23 strikes in October, 1941, involving 5,511 workers, with a time loss of 19,693 days. The more important strikes during the month were: steel plant workers at Windsor, Ont., textile factory workers at Beauharnois, P.Q., and coal miners at Nanaimo and Cumberland, B.C., and at Glace Bay, N.S.

One strike involving 45 workers was carried over from September and 25 commenced during October. Of these 26 strikes, 24 were terminated during the month. Three resulted in favour of the workers, seven in favour of the employer, one was a compromise settlement and 13 were indefinite in result.

At the end of the month two strikes were reported as unterminated, namely, laundry workers at Saskatoon, Sask., and textile factory workers in Montreal, P.Q.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such strikes are listed in this paragraph for a period up to one year after their removal from the table of current strikes.

The following comparative table gives information for September and October, 1942, and October, 1941.

Date	Number of strikes	Number of employees involved	Time loss in man working days
*October, 1942.....	26	6,107	26,926
*September, 1942.....	43	13,316	37,838
October, 1941.....	23	5,511	19,693

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress prior to October, 1942				
SERVICE—

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in August was 118, and 6 were still in progress from the previous month, making a total of

124 disputes in progress during the month; 21,600 workers were involved in the disputes in progress during the month and the time loss was 37,000 working days.

Of the 118 disputes beginning in August, 32 arose out of demands for increased wages and 37 over other wage questions; 6 over working hours; 15 over questions as to the employment of particular classes or persons; 24 over other questions as to working arrangements; and 4 on questions of trade union principle. Final settlements were reached in 96 disputes, of which 17 were settled in favour of workers, 54 in favour of employers and 25 resulted in compromises; in 19 other disputes, work was resumed pending negotiations.

British India

The number of disputes reported for the third quarter of 1941, was 78, involving 108,820 workers, with a time loss of 1,184,919 working days.

New Zealand

The number of disputes reported for the first six months of 1942 was 47, involving 10,641 workers with a time loss of 29,832 working days; the approximate loss in wages was £32,491.

United States

The number of strikes beginning in September was 290, involving 80,000 workers in these new strikes. The time loss for all disputes in progress during the month was 450,000 man-working days.

ACTIVITIES OF NATIONAL SELECTIVE SERVICE

Stabilization of Man-power in Base Metal and Coal Mines—Farm Labour Assistance—Labour Exit Permits—Discouragement of Racial and Religious Discrimination

IN the first step towards maintaining labour complement in vital industries, a directive was released on October 21, 1942, which stated that arrangements had been made with the Department of National War Services that military deferment requests from all men in base metal, basic iron and steel, and coal mining and certain allied industries would be given special consideration. In return, no permits were to be issued by selective service officers allowing men to leave these industries for other employment except under special circumstances, such as health, and about which a full report must be made to selective service headquarters. The directive instructed their officers to notify local union officials of organizations affected by the order, explaining the reasons for the order.

Farm Labour Assistance

During recent weeks, Labour Department officials and selective service offices took action in several areas to meet farm labour needs. To cope with scarcity of labour in Eastern Canada's fruit and vegetable harvest and canning operations, school students were organized into squads. To provide extra help in the Western Canadian harvest, upwards of 5,000 farm workers and university students were sent by special trains to Saskatchewan and Alberta. (LABOUR GAZETTE, October 19, 1942, p. 138). But in both instances the action taken was on an emergency basis, with little time for advance planning.

Newspaper editorials in the affected areas and messages received by the Minister of Labour and selective service officials, indicate that the results were satisfactory. Editorially, the Regina *Leader-Post* said: "The plan has accomplished what it set out to do. It has tided the farmer over a tough spot, which he could not have got through otherwise." Hon. R. J. M. Parker, Acting Minister of Labour in Saskatchewan, said, that reports from all sections of the province indicated that the scheme had been a "decided success." In a letter to the Dominion Minister of Labour, the Alberta Minister of Agriculture, Hon. D. Bruce MacMillan declared that the supplying of men from the East had been a success and had "materially assisted" in getting the crop threshed.

Labour Exit Permits

One of the most important man-power controls recently effected was the establishment of a labour exit permit system to control the movement of persons from Canada to take employment outside of Canada. Under Order in Council P.C. 9011, of October 1, 1942, which became effective on October 20, machinery was set up for the control of labour emigration, in an effort to retain in Canada skilled workers and other particularly essential labour.

This Labour Exit Permit Order provides, with certain exceptions, that no person may leave Canada with the intention of taking employment outside the country without first obtaining a labour exit permit from a National Selective Service Office. In this way National Selective Service has a means of conserving Canadian man-power needed in war industries and essential civilian industries.

During the first week of the operation of this new Order, one hundred and fifty-one applications for permits asking permission to work in the United States were received, indicating the extent of the movement of labour from Canada. At the top of the occupations seeking such permits was the nursing profession, which already has been creating concern because of the scarcity of nurses in Canada. Permits were not issued to applicants whose services are needed in the Canadian war effort.

There are certain exemptions from the Labour Exit Permit Order. These include: persons going to take up employment in the service of the Government of Canada, the Government of any Province, or the Government of any other country; citizens of a country other than Canada, who are proceeding to the country of which they are nationals; persons in transit through Canada; members of dramatic, artistic, athletic, or spectacular organizations departing from Canada temporarily for the purpose of giving public performances or exhibitions of an entertaining or instructive character; actors, artists, lecturers, journalists, priests and ministers of religion, authors, lawyers, physicians, professors of colleges, accredited representatives of international trade unions, commercial travellers and undertakers, departing from Canada for the temporary exercise of their respective callings; officers and members of crew of any vessels leaving Canada, and officers or seamen proceeding to join vessels at United States ports, provided that they hold authorization issued by or on behalf of the Director of Merchant Seamen; a wife who is accompanying her husband provided that the husband has either obtained a valid Labour Exit Permit or is exempted from obtaining a Labour Exit Permit; farm labourers going to the United States for seasonal work under special arrangements between the Governments of Canada and the United States.

Those persons desiring to obtain a Labour Exit Permit make application at a Selective Service Office. In the application for the permit, the applicant must give the name and address of the foreign employer. If a permit is issued it must contain complete details of the possessor's appearance, including thumb print. The permit may be valid either for a limited period of absence from Canada at the expiration of which the permit must be renewed, or for an indefinite period. The permit states the period during which departure from Canada may take place and is not valid for departure after the expiration of that period. This provides for changes which may occur in the essentiality of the occupation of the holder, inasmuch as a scarcity may have developed in that occupation following the granting of a permit.

A Labour Exit Permit may be specially endorsed with the words "The right to cancel this permit is reserved," and any permit so endorsed may be cancelled at any time by the Director of National Selective Service. If a permit is cancelled, the holder is subject to recall to Canada within such period as the Director may prescribe.

Permit may be renewed by applying on a special form provided for this purpose. Such an application must indicate whether the holders of permits have changed their employment and must bear the attestation of the employer that the facts as decribed by the applicant are true and accurate.

The Labour Exit Permit Order provides penalties for any person found guilty of an offence under the Order. Penalties may not exceed either twelve months imprisonment or $500 fine, or both fine and imprisonment.

Discouragement of Racial and Religious Discrimination

Employers who continue to discriminate against Canadian workers on grounds of race, religion, creed or colour may find all sources of workers closed to them by refusal of National Selective Service to issue permits for workers to seek employment with them.

Instructions have gone forward to all National Selective Service officials calling their attention to sections of previous instructions on this problem and supplementing those instructions. Pointing out that war contractors, for security reasons, are prohibited from employing certain classes of aliens, Selective Service officers are instructed by the directive to learn from the security officers of such contractors the exact regulations applying to their plants and conform to those regulations. Except for this, the instructions continue: "Some employers continue to discriminate against certain classes of persons on grounds of citizenship, nationality, race, language, name, creed or colour. Such discrimination impairs the war effort by preventing the most effective use of our total labour supply, and tends by developing well-founded resentment and suspicion, to defeat the democratic objectives for which we are fighting.

"No official of Selective Service shall do anything to encourage or facilitate any such discrimination, and no such official shall make any remark to, or ask any question of, any applicant or employer that could be interpreted as condoning or suggesting discrimination in employment against any class of person, and no official in selecting applicants for referral shall take into consideration any factor other than the applicant's ability satisfactorily to fill the vacancy.

INDUSTRIAL FATIGUE AND MEDICAL SERVICES IN INDUSTRY

Variety of Factors Upon Which Health of Workers Depends—Precautionary Measures for the Prevention of Illness and the Maintenance of Production

A pamphlet recently prepared by Dr. C. F. Blackler, Acting Chief of the Division of Industrial Hygiene, Department of Pensions and National Health, deals with the problem of industrial fatigue as it affects war production. Dr. Blackler emphasizes the need for medical services in factories to maintain the health of workers. The text of the article is as follows:—

Chiefly because it is consistent with the war effort, public health workers are not infrequently questioned regarding fatigue and its relationship to production. A cautious reply is usually given because of the many factors that complicate and enter the picture from every angle. If an inquiry into the situation could be confined to the plant and the conditions found there a solution might be closer at hand. Such an inquiry would be invariably directed to and would include an investigation of working conditions generally, hours of labour, monotonous tasks, rest periods, lighting, heating, ventilation, excessive noise, overcrowding and those fundamentals of comfort under which the working day is spent.

But all this pre-supposes that we are dealing with an individual who has been proven to be in good health by means of a complete physical examination—a pre-employment examination—and who receives a check-up from time to time. These periodical examinations, with appropriate laboratory tests as required, will bring out incipient or potential disease, which being detected early, places the individual in a position to take the necessary precautions before a physical breakdown becomes imminent. Throughout the incipiency of most diseases there is a period of chronic fatigue. If then, precautionary measures have been taken, we are in a position to say that insofar as is humanly possible to determine and within the limits of diagnostic skill, the worker is not at a disadvantage as far as his health is concerned and that the job is not beyond his physical or mental capacity. In the determination of psychological factors, aptitude tests are useful.

Thus, the first question that should be asked in any consideration of fatigue is:—"Has the worker had a pre-employment examination to determine his physical and temperamental fitness for the job?" In the neglect of medical examinations plants are placed in the unenviable position of hiring men who might have been rejected by another plant for physical or psychological reasons. Indeed, men suffering from a disability or disease are often attracted to plants which do not require examination before employment. In this connection there is the case of the large industry in which two deaths recently occurred from natural causes, although in each case the question of a hazard arose to the embarrassment of the employer and dissatisfaction among the men.

Symptoms of Industrial Fatigue

Apart from actually slumping over the machine or bench, lessened or defective output, an increase in the number of accidents, lost time and inefficiency, what are the evidences of fatigue? Here the plant physician comes into the picture. From a study conducted by Dr. R. V. Ward* and based upon an analysis of the medical records of a large number of factory workers, two-thirds of whom were young women, strangely similar complaints were given. These complaints conceivably fit into many types of organic disease but no organic disease could be found in the group. In the main they consisted of symptoms which so frequently accompany tuberculosis, loss of appetite, loss of weight and tiredness, to which were added irritability, pallor, inability to sleep and tremor of the outstretched hands. It is only too obvious that in such suitable individuals tuberculosis finds its most likely victims.

The mortality from this disease is still much higher in industrial workers than it is in other population groups. It is well known that on an average one or two cases of tuberculosis are found among every two hundred workers. A recent survey revealed seven cases in 754 food handlers. One ventures to hope that if an employer with two thousand employees knew he was harbouring upwards of twenty cases of pulmonary tuberculosis in his plant, he would de something about it. Yet, that is precisely the situation as it exists to-day. Already there are very definite signs that the disease is on the increase and a further increase is onticipated especially in the larger areas. Workers in the younger age groups coming from rural areas to work in factories will, in many cases, meet their first exposure to tuberculosis. It is therefore, of the utmost importance that existing cases of the disease be discovered and receive the necessary treatment before they act as sources of infection to others.

*Ward, R. Vance—Chronic Fatigue Symptoms Among Industrial Workers; Canadian Public Health Journal, 1941; 32:464.

Another factor causing fatigue is malnutrition and recent studies have shown that manual workers require one of the vitamins in good measure to compensate for its loss through sweating.

Last year's compensation records in Canada give a total of 314,544 accidents of which 1,217 were fatal. How many of the deaths were due to fatigue, directly or indirectly, is anybody's guess, although a figure as high as 25 per cent has been given.

Urgently as men and women are needed in an industry, we should not countenance their employment if their inefficiency through illness or fatigue contributes to the inefficiency of others and if the disease from which they may be suffering is communicable to their fellow workers.

From the point of view of fatigue alone, of the many problems in industry, it would appear that a medical service is justifiable.

Standards for Medical Service Program

What are the needs or standards of such a service? There are no hard and fast rules although it goes without saying that the medical staff should be in proportion numerically to the number of workers, the nature of the work and extent of the hazard involved. It is desirable that all plants, irrespective of size and number of employees, keep adequate health records. Health records, a first-aid room with all facilities, stations with protective equipment, adequate nursing assistance, safety personnel, the latter especially where hazards are great, are basic requirements.

In general, one full-time physician is required for every 2,500 workers, with a nurse for every 1,000 employees. Two physicians in part-time attendance might replace a single full-time physician. In some industries where the work is hazardous, a higher proportion of medical attendants may be necesary; while fewer may be required in light industries, or in firms where the employees are mainly office workers. Several small plants might conceivably share a medical man though it would be better that each maintain a separate nurse. Both plants and physicians would do well to seek advice and weigh carefully all angles of the situation before establishing a service which on the one hand might prove totally inadequate for the welfare of the worker and on the other hand prejudicial to the physician. No plant with two or three thousand employees can expect one part-time physician to give of his best to the plant and, at the same time, attend to the demands of a private practice.

The needs of small industries are not less great proportionately. Twenty plants employing fifty men or ten plants with one hundred men require medical supervision just as much as one plant with one thousand employees. More often than not the smaller plant lacks many features of the larger, such as adequate washing and toilet facilities, rest rooms, proper lighting and ventilation and the opportunity of obtaining a cheap, hot nourishing meal in canteen or cafeteria.

Relation of Home Environment to Health of Workers

To add to the effectiveness of the service, one or two nurses, as the need arises, should be detailed for home visits so that psychological and environmental factors in the home might be given their proper perspective. Emphasis will be laid upon the study of the home environment embracing as it does, the health and welfare of the family unit, financial worries and insecurity, for the business of living is a complex problem not always discernible in the casual contact in plant or workshop. It is in the home or beyond the factory gates that the astute nurse not infrequently discovers a clue to the illness of the worker as shown by instability and maladjustment. This does not mean that antagonisms may not occur at the plant for cases are on record of an illness being precipitated or entirely the result of a workman entertaining feelings of animosity toward a foreman or fellow worker. Other influences may be at work, such as late hours and insufficient sleep. There is even a danger of overdoing one's play for all recreation is not restful and much energy is poured away wastefully.

Beginning with healthy workmen the objective in any industrial medical service is prevention—prevention of disease and disability, of fatigue and accident by the provision and maintenance of good environmental conditions with education of the worker into an appreciation of the value of good food, adequate rest and judicious use of leisure hours.

Long working hours and driving days in the factory and shop, it is to be hoped are over and no longer is the last hour of the day considered to be the "profit hour", with its fatigue and high accident rate. The slogan now is "Spare the worker and speed the work" and this is no idle paradox for abundant evidence is available showing the good effect of medical supervision and shortened hours on production as well as on the health and welfare of the worker. Accidents are fewer and the average annual loss of time through illness considerably reduced. It has been shown that safety in all its phases pays great dividends; pays in better relationships between management and men; pays in lowered compensation rates and increased morale and lessens the burden of the tax paying public.

PRICE CONTROL IN SOUTH AFRICA

Inflationary Tendencies and Early Efforts at Control—Appointment of a Price Controller—Freezing of Prices—Results of Control Measures

THE Union of South Africa Government has been faced with the ever-present danger of inflation since the outbreak of war. J. C. Macgillivray, Canadian Trade Commissioner at Cape Town in a report to the Department of Trade and Commerce discusses South Africa's problem and the steps that have been taken thus far to curb these inflationary tendencies. The incomes of wage-earners have moved upwards, since the outbreak of hostilities, making more money available to be spent; also some branches of commerce and industry have, because of war conditions, increased their earning power. Taxation has removed a large proportion of this extra profit, but notwithstanding this, some sections of the community have more money at their disposal than before. Military disbursements and the presence of large numbers of visiting troops and refugees have also assisted in increasing the demands and consequently the open competition for goods and services.

Concurrently, many factories have been turned over to war production, while the importation of goods from abroad has become slower and more difficult and, in instances, impossible, so that despite abnormal demands, there are fewer goods available for sale. Measures have been taken which, while they could not prevent a sharp rise in prices and increasing scarcity of goods, have so far been successful in keeping the movement under a reasonable degree of control and preventing an unchecked inflation spiral which would otherwise have been unavoidable. The outlook for the future is not, however, particularly reassuring, unless the existing regulations are extended.

At the end of June, 1942, the official cost-of-living index, averaged for the nine principal urban centres, showed an increase of 20·7 per cent in comparison with the month preceding the outbreak of war. Concurrently, the index figure for imported goods, on which this country is so dependent, has gone up by 50 per cent. The upward swings have been most marked during the current year.

As regards anti-inflationary measures, there has been an enforced diversion of wealth from the individual to the State by heavily increased income taxes and excess profits levies, maximum prices have been fixed in cases where such action is feasible, compulsory saving was introduced in the 1942 budget and, in addition, there has been the inducement to invest surplus capital in war loans.

Concerning price control, the efforts of the Government have been devoted, in the main, to the supervision of the profits of traders and manufacturers. In effect, these are profit control regulations, and there is no attempt, as is the case in Canada, to regulate the very important cost factors in price. The result is that the South African cost-of-living index has risen much more steeply than its Canadian counterpart although this does not imply that the local control has not been fulfilling its purpose. It is due, rather, to an increase in the prices paid to the primary producers of certain agricultural products, to the sharp rise in the landed cost of imported goods, and to the increase in industrial wages. All these items of cost are outside the scope of South African price control.

Initial steps leading up to the control of prices were taken up by the Union Government shortly after the outbreak of hostilities, when a body known as the National Supplies Control Board was constituted on September 14, 1939, one of the principal functions of which was defined as the control of prices in the Union. The regulations dealing with price control were in two parts: the first empowered the Minister of Commerce and Industries, on the recommendation of the Board, to fix maximum prices; the second was a regulation under which profits on all commodities whose prices were not actually fixed, were controlled by means of a general formula. This formula specified that the seller of any goods should not make a larger percentage of profit than the percentage earned on like goods at August, 1939, the month preceding the outbreak of war.

Appointment of Price Controller

During the period August, 1939, to August, 1941, wholesale prices rose in the Union by about 25 per cent and retail prices by less than 9 per cent. After the first increase in prices, which took place in the opening months of the war, the price-level table remained relatively stable for nearly two years, until towards the middle of 1941, when it began to rise. This increase was due to unfavourable weather conditions which adversely affected local agriculture, and also to

the intensification of the war and the consequent difficulties in obtaining shipping to convoy imports. The attendant increase in prices led to more comprehensive control measures, and the appointment of a Price Controller. The Controller's powers included the fixing of a maximum price of goods in any transaction between person and person, the fixing of maximum charges for any service; and the freezing of prices or charges to the current level during a specified period.

The first major task which the Price Controller undertook was the revision of all the regulations governing price control. New regulations were evolved, which enabled traders to take a gross margin on costs determined in accordance with a factor which the Controller published. This factor, which was less than unity, varied in the inverse ratio as the cost of the goods increased, and when multiplied by the percentage of gross profit taken on like goods in the pre-war period, gave the percentage of gross profits that any merchant or manufacturer was entitled to make on any particular goods. The objective was to make sure that the trader or manufacturer would earn the same profit as he did before the war and that this profit was not increased as costs rose. To allow for a possible fall in the volume of sales and for increased costs of distribution, the factor was so computed that the gross margin taken on the sale of any goods was approximately 10 per cent higher than the gross margin taken on like goods prior to the war. The factor was also so determined that as costs rose this margin of 10 per cent increased slightly. This basis of profit control reduced permissible profits very materially when compared with those allowed under the original regulations. The new system also provided that the controlled profit margins would be added to the actual cost of the goods and not to the average of the costs and replacement values as decided by the National Supplies Control Board.

Freezing of Prices

In order to put this new regulation into effect some further difficulties had to be overcome, such as the necessity of merchants repricing all stocks on hand. To overcome this the Controller issued a notice in October, 1941, freezing the prices of goods on hand so that the operation of a new price formula, based on the factor, applied only to goods received into stock after that date. This arrangement, under which two bases for the determination of prices were in operation, lasted until July 1, 1942, after which the freezing notice was withdrawn and all prices not specifically fixed were to be determined in accordance with the new factor published on the same date.

This new factor is, in principle, the same as the one already explained, with the exception that it makes provision for an additional 5 per cent profit margin, which increase is intended to compensate for the anticipated substantial fall in turnover which it is considered may take place as the year advances owing to the expected contraction in the arrival of goods from overseas. To aid traders in determining new prices, a special ready-reckoner was provided in accordance with the provisions of the regulations.

The foregoing is a summary of the steps taken by the Controller to regulate prices in general. In addition, however, he also retained the power to fix maximum prices specifically and, since his appointment, the list of commodities whose prices have been so fixed has been very materially increased. These include not only retail prices, but also a wide range of wholesalers' and manufacturers' prices. In actual fact, specific price fixation, either by stated figures or fixed percentage margins allowable on costs have now been applied to nearly all household commodities ordinarily obtained from grocers. Apart from the fixation and control of prices of goods, the authority was extended to the Controller to enable him to regulate the charges for a number of services, such as laundering, the servicing of motor vehicles, dry cleaning, boot repairing, and haircutting. In addition, the control of hotel and boarding-house charges was placed under his administration. By a special war measure (Proclamation dated September, 1941) these latter were fixed at a level approximately 7½ per cent above that prevailing on September 1, 1939. Other new regulations included provisions against the increasing of costs as a result of inter-merchant sales. If the first trader sells at the maximum permissible profit, no subsequent dealer is able to make a profit on further sales.

Results of Control Measures

Despite the tightening up of the price control regulations, the price level in the Union has continued to rise since the appointment of the Controller, and the rate of increase has been particularly rapid during the past six months. This increase has, however, been largely due to outside causes and the cost-of-living figures have been influenced by a number of factors which are beyond the control of the regulations.

An analysis of the cost-of-living index indicates that one contributory reason has

been the higher prices of certain agricultural products. The Price Controllers' powers as regards price fixation extend to certain agricultural products in the hands of traders but do not take in the price paid to producers. His authority has been mainly confined to regulating the profits of traders and manufacturers, and while these have been curbed the prices paid to primary producers have been increased.

While profits are an important factor in living costs there are other equally essential components. These are wages, profit, and interest charges, and any fluctuations in these can have a marked effect on prices. Interest rates in South Africa have, since the commencement of the war, been remarkably steady, with a downward rather than an upward tendency. Wage levels, on the other hand, have moved in the opposite direction and have influenced price levels. Increases granted on a wide basis without much discrimination, coupled with relatively generous military allowances and the enhanced profits of entrepreneurs, have all had their inevitable effect.

The third important component, profits, is only partially controlled, owing to there being no peg on agricultural profits. Similarly, under the present system nothing can be done to influence the price level of imported goods and materials. A system of subsidization, such as tried in Canada, has not been seriously considered.

In defending the control measures which have been taken, it is contended that but for these, and bearing in mind the scarcity of certain commodities, prices could have got completely out of hand. It is also claimed that the profit element in the price structure is one of the most sensitive to fluctuation and that its control in times of shortage is a vital factor in keeping living costs within reasonable confines.

It is asserted that in most businesses turnovers are now dropping very materially as a result of the shortage of commodities. Some merchants hold the view that as turnovers drop a larger margin of profit should be given as compensation, although organized commerce does not subscribe to this theory.

Concurrently with recent price increases there is certain evidence of an increase in so-called "black-market" transactions, particularly in the larger urban centres, and the Controller of Prices has made appeals to the public for assistance in stopping this practice. These operations are said to be conducted by traders who have accumulated large stocks of commodities in short supply. Sales are made secretly at exhorbitant prices, no invoices are given, only cash is accepted and no book entries are made. Penalties are provided for merchants selling under such conditions, and it is now proposed to make the purchaser equally liable. Anti-hoarding legislation has also recently been passed.

It has also been announced that important new developments in price control are pending. A list will be published of flat percentages of profit which may be added to current cost to arrive at permissible prices. This will cover about 400 commodities and, while it will continue to be effective on merchant profiteering, it cannot, as such, be expected to do much to slow down the still mounting cost-of-living curve, something which can be accomplished effectively only by increased supply or diminished spending. All that can be done is to distribute with some degrees of equalization the burden of increased cost.

Prime Minister on Industrial Accidents

A recent statement by the Rt. Hon. W. L. Mackenzie King, Prime Minister of Canada, stresses the cost of accidents to the war effort: "As Canada moves steadily towards a total war effort, we are bound to observe that needless casualties in industry are as much of a drain on our national man-power as needless casualties in the army.

"When close to 12,000 industrial accidents are reported in the Province of Ontario alone in a single month, we cannot but reflect that this is the equivalent of having an entire division of our armed forces suffer wounds at the hands of the enemy.

"Even though, fortunately, many of these accidents may not have long-lasting effects, just as not all wounds are severe, nevertheless they handicap us in our war effort. Each and every accident in industry delays the day when we shall win final victory over our foes."

The Prime Minister praised the work of Industrial Accident Prevention Associations towards the reduction of the frequency of industrial accidents.

The total number of accidents reported to The Workmen's Compensation Board of Ontario in October was 11,815 which included 57 death cases, as compared with the September figure of 11,965, including 27 fatalities. In October, the total compensation and medical aid awarded by the Board amounted to $925,055.22 of which $179,278.26 was for medical aid.

PRICE CONTROL IN CANADA DURING OCTOBER, 1942

The "Freezing" of Business—Distribution of Goods in Short Supply—Conservation Activities—Measures to Ensure Effective Use of Housing—Consumer Rationing—Price Adjustments

WITH a view to conserving materials and man-power and ensuring an equitable distribution of consumer goods of which there is a short supply, the Wartime Prices and Trade Board during October established more direct control over civilian trade and industry.

A summary of these various new controls as well as a review of certain price adjustments is given in the following article.

The "Freezing" of Business

An Order was passed during October severely restricting the establishment of any new business. In general, the new regulations prohibit, except under special permit, the undertaking of a new class of business, the manufacture or distribution of any new line of goods, or the use of any larger premises by an operator. Persons intending to go into business also require a permit. The purpose of the Order is to conserve materials and manpower, and to maintain a greater degree of stability for persons now engaged in trade or industry under the conditions of wartime requirements.

In its Policy Statement accompanying the Order, the Board stated that permits will be granted only in exceptional circumstances. The regulations are strengthened by the provision that manufacturers and wholesalers are not to supply goods to businesses to whom they have not previously supplied such goods unless satisfied that the buyer holds a valid licence issued by the Board and is entitled to deal in such goods under the provisions of the Order or under a permit obtained from the Director of Licensing. (Board Order No. 194, effective November 2, 1942).

Distribution of Goods in Short Supply

In reiterating and amplifying its Statement of Policy issued last November, the Board called upon manufacturers and wholesalers, who through shortages of various civilian goods find themselves unable to meet the full requirements of retailers, to allocate available supplies equitably among the customers to whom they sold in 1941. In cases where shortages exist, suppliers are not to take on any new accounts unless requested to do so by an Administrator of the Board. Special directives will be issued by Administrators to implement in particular cases the policy set forth. Administrators have authority to direct any supplier to make deliveries of goods, such as goods in short supply, to any designated person, should such action be required to ensure equitable distribution.

Conservation and Allocation

Newsprint and Magazine Paper. Commencing with November output, the production of newsprint and magazine paper has been limited to the average of the operating rates for April to September of this year (A454 and A455, October 28). The limitation applies to paper produced for sale within Canada or the United States. The immediate "freeze" of production, paralleling action taken by the War Production Board in the United States, is the first step towards a balanced program of further reduction and concentration of the industry on an international basis.

Another Order was passed with respect to the issue of permits to newsprint manufacturers. (A451, October 26). On or after November 2, 1942, manufacturers are not to produce, sell, deal in, or undertake transactions in any newsprint until and unless authorized to do so under written permit by the Administrator. Manufacturers were to register with the Administrator within 10 days from the date of the Order. The Order was designed with a view to facilitate transfers of tonnage and applies equally to exports and domestic requirements.

Farm Machinery and Equipment. Supplementing a Board regulation passed in September reducing the manufacture and importation of new farm machinery, another Order was issued in October which provided for the rationing of all new farm machinery and equipment (Board Order No. 192, October 1). Briefly, the new ration plan, which became effective October 6, calls for the filing of essentiality applications prepared by the farmers, countersigned by the local dealers, reported on by the branch managers of the various implement companies and finally approved by the Board through its regional offices. Applications and permits are required for all deliveries, notwithstanding prior contracts.

The only types of new machinery and equipment exempted from the rationing Order are attachments, repair and spare parts, track laying type tractors, irrigation or drainage equipment, hand tools and milk cooler refrigeration units. With respect to spare parts or repair parts, the Order provides that they

are only to be sold or acquired if necessary at the time of sale to put machinery and equipment in good working condition.

Residential Lighting Fixtures. In an Order instituting extensive simplification in the production of residential lighting fixtures, provisions were made for distributing supplies on the basis of essentiality. (A423, Oct. 5). Persons requiring new electric lighting fixtures or parts for their homes will have to sign a statement that the articles will be used only for essential maintenance and repair to fixtures already installed. If a person wishes to replace existing residential lighting fixtures with a new installation, he must obtain the written permission of the Administrator of Electrical Equipment and Supplies.

Honey. Industrial users of honey were notified by the Foods Administration that they must dispose of any quantity of honey in their possession over and above the amount they are permitted to use between the end of October and the end of next June. There was evidence that there had been excessive accumulation of honey, probably in anticipation that larger quotas for industrial use would be authorized, but the Foods Administration pointed out that an increase could not be granted in view of the short production of honey this year in many parts of Canada and because of the need to provide as much honey as possible for domestic use.

In order to protect the supply of beeswax, essential for comb foundation, an order of the Oils and Fats Administration prohibited, except with written permission, the use of any beeswax propagated in Canada for any purpose other than in the manufacture of comb foundation. (A428, Oct. 5). It was pointed out that domestic wax possesses the physical and chemical requirements suitable to honey production in Canada, and is preferred to imported wax. Such quantities of the latter as are required for miscellaneous industrial purposes (e.g. candles) will be imported by the Commodity Prices Stabilization Corporation.

Butter. In order to distribute more evenly the present stocks of butter in Canada, the Foods Administration of the Board issued an order limiting all holdings of butter in storage warehouses and creameries at November 30, 1942, to 75 per cent of the amount held at the same date last year. The Order also required that beginning with November and until further notice all holders of butter carrying stocks in excess of 5,000 pounds, must report their actual holdings to the Foods Administrator at the close of each month. (A457, October 31.)

Simplification and Conservation

Metal Containers. With a view to further conserving steel and tin, regulations covering the manufacture and use of metal containers intended for packaging goods for sale have been consolidated and considerably extended (A425, October 23). The latest Order was issued by the recently formed Metal Containers Administration. The new regulations permit the use of tinplate only for essential food products which cannot be preserved in any other manner and eliminate the use of metal containers for any product that can be packed in composite or non-metal containers such as glass or fibre. The schedule attached to the Order lists the commodities for which metal containers will be provided, the size of the containers permitted, the type of metal from which the container may be made (such as tinplate, terneplate and blackplate) and the quantity or quota applicable to the packaging of each product.

Glass Containers. To enable the glass industry in Canada to meet the substantial new demands placed on it, the Board issued an order for the simplification of glass containers used in commercial canning for jams, jellies, marmalade, pickles and certain other food products. After the end of 1942, glass manufacturers are to make new containers for the listed food products only in the form of plain, round jars approved as to style, quality and shape by the Administrator of Glass and Glass Products. Standard sizes by fluid ounces are established for each product, and the Order stipulates that the size must be blown in the glass. The simplified glass containers are to be so designed as to use standard size caps. (A441, Oct. 14.)

Other Products.—The Board's program of simplification and conservation was also extended to a wide variety of consumer products,—from ordinary writing inks to medical garments. With respect to *writing inks* colours are limited to 6 in number, and sizes of bottles are restricted. Sale in any size or colour prohibited in the Order is forbidden after December 31, 1942. (A417, October 1). The use of elastic material in the manufacture of *medical garments,* in the 12-month period ending August 31, 1943 or succeeding periods is limited to the amount so used by the manufacturer in 1941. The Order provides for the standardization of various types of medical garments and specifies the reduced amounts of rubber or elastic materials to be used in their manufacture. (A430, October 8).

To conserve materials and reduce costs, a simplification Order was applied to the manu-

facture of *men's washable cotton apparel:* aprons (for waiters, butchers, etc.) coats, vests (for barbers, waiters, etc.), frocks (for dentists, laboratory workers, machinery, etc.), pants, overalls, and combination overalls. For each type of garment, specifications and restrictions are made with respect to finished length, depth of hem, number of pockets, buttons, etc.; and certain features—such as triple stitching, yoke or pleated backs, and contrast cloth trim—are eliminated. Manufacturers are forbidden to set one label over another, or to affix any other labels than those specified (A438, October 16).

For the purpose of conserving brass, copper, steel and also rubber, an Order was passed restricting the number and sizes of metal and rubber parts which may be used in *portable lamps and lamp shades,* (e.g. one socket per lamp; length of electric cord limited to 5 feet in floor lamps and 6 feet in other portable lamps.) Metal can be used only for certain specified parts. The output of lamps is also restricted: the Order provides that during the period July 1, 1942 to December 31, 1942 the number of units of the several classes of lamps specified in the Order must not exceed 25 per cent of the number of units of that class made during 1941. (A413, October 1). With a similar purpose in view, an Order was issued restricting the kinds of metals and their use in the manufacture of residential lighting fixtures (types and kinds designed to be permanently affixed to wiring outlets). (A423, October 5).

Certain minor amendments were issued with respect to previous simplification orders covering commercial mixed feeds, (A414, October 1); paper board for folding cartons (A436, October 13); storage batteries (A435, October 13); power and distribution transformers (A434, October 13); closet seats (A442, October 14); and rayon print goods (A439, October 16).

Restriction and Conservation

(Note: Although the other types of orders, viz., allocation and simplification, restrict the manufacture and sale of products to which they apply, the restriction orders reviewed under the present heading differ from the others mainly in that they do not specifically provide for any system of allocation or introduce any measure of simplification. They will, however, result directly or indirectly in conserving materials, manpower, power and transportation facilities for war purposes).

The manufacture of *stranded steel clothes line wire* is now prohibited entirely and no manufacturer may sell, for use as clothes line, any single strand steel or plated wire. (A424, October 5, amending A272). A further restriction with respect to *metal hair pins and bob pins* reduces production for the period October 1, 1942, to September 30, 1943, and subsequent periods to 30 per cent of the tonnage manufactured in the calendar year 1941. Manufacturers are not allowed to accumulate raw material inventories greater than necessary to maintain production for 90 days at the rate permitted in the Order. (A444, October 16, replacing A340).

In the production of *beer* an Order provided that on and after November 1, 1942, the use of malt is restricted to not more than the quantity used for such purpose in the corresponding quarter of 1942 (quarters to end on the last day of January, April, July and October). In addition to limiting production, the restriction is expected to have the effect of saving manpower in distribution and sales promotion operations. (A450, October 22).

The Order regarding *operation of private commercial vehicles* originally provided a wide exemption for vehicles while engaged in the transportation of pulpwood and other wood, logs and poles. An amendment limited the exemption to vehicles which are engaged in the transportation of logs and poles from the locus of lumbering operations to a sawmill or a railway (A440, October 15). Another amendment postponed by 30 days (until November 30) the effective date of the order prohibiting the operation of private commercial vehicles more than 35 miles from the registered address of the operator. The purpose of the amendment is to enable the heavy movement of goods which normally takes place during the fall to proceed without interruption.

The use of *carnauba wax* in the manufacture of wax polish is restricted after November to a maximum of 5 per cent by weight of the finished product, and in the manufacture of shoe polish it is restricted to a maximum of 4 per cent. (A448, October 22).

In an order covering *tung oil and oiticica oil* certain restrictions which had been placed on the distribution and use of *perilla oil* have been removed because substitute materials are now available for use. The restrictions formerly placed on tung and oiticica oil have not been changed substantially except with regard to grade 2 B. oiticica oil. This grade of oil may now be used for the manufacture of any protective coatings other than those entering the channels of retail trade. (A437, October 13, replacing A75).

Rental Regulations

Housing Accommodation.—Since wartime demands for materials and labour have severely

restricted new housing construction, the Board was directed by the Government to take measures to ensure that the most effective use is made of existing housing accommodation in congested areas. To provide the Board with the necessary legal powers to carry on with this work, the Wartime Leasehold Regulations, under which maximum rentals are fixed, were suitably amended. (P.C. 8973, October 1, 1942, amending P.C. 9029, November 21, 1941). Early in October, a Real Property Administrator was appointed. It was announced that through the Real Property Administration, the Board would proceed as quickly as possible to organize voluntary local campaigns.

To facilitate further the carrying out of these measures, the Board issued an Order (Board Order No. 200, October 20) empowering the Real Property Administration to undertake surveys of housing accommodation in any area in Canada and, in conducting such surveys, to require householders to furnish the information requested. The Order is also designed to suspend with respect to "congested areas" any barrier to the sub-letting of housing accommodation, whether set up by municipal restrictions or by owners.

Room Rentals.—Special regulations were passed during the month with respect to the renting of rooms in certain centres in Nova Scotia. Landlords who had rooms for which a lease was in effect during the period September 14-September 28, 1942, were required to file application forms by October 10 with the Regional Rentals Committee, after which they received a rate card showing the maximum rate that may be charged or paid, either in respect to each person occupying the room or for the room as a unit. Rate cards must be posted in a conspicuous place in the room. Certain other regulations apply to cases where the number of persons occupying a room has increased.

Provision is made for a Room Rates Committee to fix or vary maximum rates and, for its information, to enter and inspect premises. Detailed regulations cover the collecting of rent for rooms, the making of receipts, etc. The order applies to: The City of Halifax, Dartmouth, and the districts of Armdale, Fairview, Woodwide, and Imperoyal—all in Nova Scotia.

Consumer Rationing

Apart from the rationing of certain durable goods (farm machinery and residental lighting fixtures) developments in the field of consumer rationing were of a minor character. Steady progress has been made in the setting up of local ration boards throughout Canada, more than 500 of which are being established. A large number of mayors and reeves have indicated their acceptance to the proposal to serve as chairman of the boards, and many have submitted panels of representative citizens for board membership.

Several rulings were issued during the month clarifying the coupon regulations or covering special circumstances.

Because of the delay in harvesting, the arrangement whereby farmers feeding harvest gangs could obtain extra sugar from retailers by signing invoices was extended from October 31 to November 15. Another announcement was made that coupons from last summer's temporary ration cards were to become void November 1, for purchases of sugar, tea and coffee, and after December 1, they cannot be used by retailers, wholesalers and other suppliers for replacement of stocks.

The Board's Rationing Division established a system of "sugar credit slips" or deposit receipts for the sugar purchase vouchers which up to October 1 were honoured for sales of sugar to be used in home preserving, etc. With the preserving and harvest seasons virtually over, the sugar obtained as replacements for the vouchers under the rationing orders (Board Orders No. 176 and 198) would not have been absorved by consumer demand until preserving, etc., started again next spring and summer. The diversion of this sugar into storage for some months would have also meant an undesirable pressure upon Canada's bulk supply of sugar for ordinary purposes. To obviate this, the ration division arranged to have retailers and wholesalers send their accumulation of sugar purchase vouchers to ration offices and in return to obtain a receipt slip which in effect will establish a sugar credit on which they can draw at a later date whenever they need extra stock. When the preserving season starts next year, or in event of any "abnormal situation", such as a store or warehouse burning down, the merchant can turn in his receipt slip and get a replacement certificate which he can use to purchase "buffer stocks".

Price Adjustments

During the month important price adjustments were made with respect to a variety of food products, mainly with a view to maintaining or ensuring an even distribution of supplies across the country. In addition, several fuelwood orders were issued covering certain centres, a few squeeze adjustments made, and price regulations specified with respect to various kinds of scrap metal.

Beef. Early in October the Board issued a comprehensive statement on matters affect-

ing the control of the supply and prices of *cattle and beef*. In rejecting the claim that "Canadian cattle prices or the prices of any other commodities should be allowed to rise as high as United States prices", the statement pointed out that "unless prices are controlled at Canadian levels the whole effort at price and wage control would be destroyed". In the face of conflicting views, however, it was necessary for the Board to provide finality in its decision. The decision arrived at "will result in beef prices somewhat higher than consumer interest would like, and in cattle prices somewhat lower than producers had recommended".

The Statement announced an upward revision of wholesale ceiling prices which was later formalized in a Board Order (Board Order No. 194, Oct. 6, consolidating and amplifying the provisions of Order No. 149). For the period October 13 to December 23, maximum wholesale carcass prices for good commercial beef were increased by $1.50 per cwt. Thereafter, seasonal increases of 50 cents per cwt. will be made on December 24, February 11, March 25 and April 29, and one of 25 cents on May 27. The level of next June is then to constitute the ceiling, with prices free to fluctuate seasonally under that ceiling in accordance with actual market conditions.

The Order defined six grades of beef; special quality, commercial, plain, cutter, cow and bull beef, and boner beef. "Special quality" must carry the government "Red Brand", and for this grade the maximum price in all zones in Canada is 50 cents per cwt. higher than for "good commercial". Maximum carcass prices for the four lower grades were set at specified discounts below the maximum price for good commercial beef. Concurrently, an order by the Food Administrator contained a revised schedule or maximum prices at which wholesalers and processors are to sell beef in cuts. (A433, Oct. 10). The Order covers the period from October 13, to December 23, which means that further orders affecting the price of cuts will be issued periodically.

With respect to retail prices, the provisions of the new Board Order are similar to those in pervious orders, with the exception of a new section providing for a maximum markup of seven cents per pound. The 15 zones already set up across Canada are unchanged with two minor exceptions. In order to ensure a more strict control of retail prices, the new Order provides that prices and markups of all persons selling beef at retail "shall be subject to periodic examination by any authorized representative of the Board, and any such representative may apply such tests and require any person to submit such beef cutting or other tests as may be authorized by the Board."

Cattle prices, as distinct from beef prices, are not subject to actual ceilings. "However", the Board's statement pointed out, "recurrent beef shortages may be experienced, and if in such circumstances black market operations force cattle prices to unduly high levels, it will be necessary to impose livestock price ceilings". The Board also announced that the Wartime Food Corporation will be prepared to buy cattle if there is at any time a surplus supply which threatens to depress cattle prices unduly.

Lamb. Seasonal maximum prices were established for carcasses, sides and cuts of lamb in order to ensure supplies (Board Order No. 196, Oct. 6). The new Order amplified the provisions of a former Order (No. 90) which had permitted specific seasonal increases, during the period January to August 15, in maximum prices of lamb carcasses and cuts over the basic period prices established by each seller. The top wholesale prices of carcasses and sides are specified in each of the 15 zones across Canada (the same zones as those established for beef) for, respectively, fresh and frozen lamb in the September-December period; frozen lamb from January to August inclusive, and fresh lamb from winter-fed lambs when the meat is sold in the period January to June, inclusive. Exempted from the ceiling are sales during the period January to August inclusive, of carcasses or sides of fresh lamb obtained from lambs born in the same year the sale is made or in the December immediately preceding.

Retailers selling lamb are not to pay more than the maximum established by the Order which is on the basis of delivery to the buyer's place of business or to his nearest railway station. Retailers are required to regulate their selling prices for the various cuts so that the aggregate price received for all cuts or portions of a carcass, side or cut will not exceed (a) lawful delivered costs, plus (b) normal basic period markup (percentage on cost), the markup not to exceed 9 cents per pound. When and if necessary, markups may be altered by the Foods Administrator.

Poultry. In order to permit the free movement of *poultry* from areas where production is heavy to areas of relatively heavier consumption, maximum wholesale and retail prices were set for all classes and grades of dressed poultry in all parts of Canada (Board Order No. 197, Oct. 6, revoking Board Order No. 70). Recognizing the seasonal nature of poultry production, the new Order

designates a "packing period" and a "deficiency period" for each kind of poultry. During the packing period, when marketing of fresh poultry exceeds current demands, the surplus is placed in cold storage. The Order sets out in schedule form, by provinces, the maximum wholesale price per pound for each class and grade of box-packed, graded poultry during the packing period. From this basis, specified variations are permitted for storage charges in the "deficiency period", for the sale of loose packed poultry, for ungraded poultry, for eviscerated chickens or turkeys and for kosher poultry. The retailer's selling price is to be computed as the sum of his cost from processor or wholesaler, plus his normal markup—the markup not to exceed, however, 9 cents per pound.

Dried Apples. An Order with respect to dehydrated apples and evaporated apples established maximum prices for processors, wholesalers and retailers (A 445, Oct. 19). The Order set maximum prices per pound, f.o.b. processor's plant for sale in 50 pound and 25 pound containers. The prices vary according to plant location and to quality. Maximum percentage markups are fixed in the case of wholesalers' and retailers' prices.

OTHER PRODUCTS

A new Order on *seeds* provides for a definite basis of maximum prices for fractional unit quantities. Maximum retail prices, all of which, unless otherwise stated, are set forth as f.o.b. retailers' place of business, have been reduced for a number of items. Without written consent, special strains and novelty kinds of seed can not be sold at prices above those allowed for the regular strains (A 446, Oct. 20, replacing A 3).

An Order on *crushed oyster shell,* coinciding with the removal of the import duty and the war exchange tax, specifies maximum amounts, depending on merchandising services performed and quantity of sale, which importers and dealers may add to original costs and actual transportation charges. (A 429, Oct. 7). For *clamshell* produced in *British Columbia,* the maximum prices which producers and wholesale distributors may charge are specified for distribution in and outside the province. Sales at retail in the Fraser Valley area are subject to specific maximums but elsewhere they are subject to base period maximum prices. (A 427, Oct. 6).

Various classifications and grades were defined for *non-ferrous metal scrap*—copper, zinc, etc., and maximum prices in cents per pound were set for producers and collectors and for small licensed dealers, from whom "Consumers" must purchase their scrap (A 415, Oct. 2).

Dealers' maximum prices for *fuelwood* were set in certain additional areas—the Province of Manitoba, Banff and Edmonton in Alberta, Kenora and Smith's Falls in Ontario, and Riviere du Loup in Quebec. (The Orders, respectively, are F 48, Oct. 20; F 46, Oct. 8; F 49, Oct. 26; F 47, Oct. 20; F 43, Oct. 1 amending F 25; and F 45, Oct. 1). Amending Orders regarding Quebec City, fifteen Quebec counties and the city of Levis, and certain municipalities in the counties of Quebec, Levis and Montmorency (the number covered was increased from 3 to 44) gave a more detailed listing of lengths and made certain price adjustments. (F 42, replacing A 104; F 44 replacing A 110; and F 41 replacing A 105; all passed Oct. 1).

A number of *squeeze adjustments* were made during the month. Manufacturers of furniture in British Columbia were allowed to increase their prices subject to definite limitations and to the written approval of the Administrator (A 432, Oct. 13). In a number of cases, the Timber Administrator authorized upward adjustments at the intermediate level over maximum prices specified in certain previous orders while maintaining individual retail prices at established levels—for white cedar shingles in Eastern Canada (A 411, Sept. 1), pine lumber of various kinds (A 419, Oct. 5, replacing A 72, and A 468, Sept. 14, replacing A 162), and timber produced from hard maple, basswood, elm and birch (A 422, Oct. 6, replacing A 26, A 28 A 45 and A 92). A squeeze adjustment was also effected in the case of birch and maple flooring. (A 467, Oct. 7).

Volunteer War Plant in Great Britain

A recent Canadian Press report tells how Great Britain's first volunteer war factory where no wages are paid, is in full swing. In a small town in Sussex fathers, mothers, school boys, grandparents, anyone over or under the draft age are working side by side turning out munitions.

The factory was started by a local Rotary Club last March. In ten weeks it was completely equipped and did not cost a cent. The leading automobile firm gave its big showroom, while engineering firms produced drilling machines, tools, benches, jigs and fixtures. The transportation and lighting are supplied by local firms.

The factory started to work in June with 150 volunteers working two shifts—in the afternoon from 2 to 6; and evenings from 7 to 10. Already they have turned out more than 100,000 bomb parts. There is a waiting list of volunteers who will start working when the factory is able to enlarge its premises.

SANTIAGO CONFERENCE RECOMMENDS LEGISLATION ON SOCIAL SECURITY

THE first Inter-American Conference on Social Security was held at Santiago de Chile on September 10-16 on the invitation of the Chilean Government and under the auspices of the Inter-American Committee to Promote Social Security (Labour Gazette, September, 1942, p. 1001). It was attended by delegates from 21 countries of the American Continents and also by delegations from the Governing Body of the International Labour Office, including M. Paul van Zeeland, and from the Pan-American Sanitary Bureau. Canada was represented by Hon. W. H. A. Turgeon, Canadian Minister at Buenos Aires, and Mr. M. J. Vechsler, Canadian Government Trade Commissioner for Chile.

The Conference issued a "Declaration of Santiago de Chile" regarding social and economic security and adopted a number of resolutions on social insurance. It also decided to establish a permanent organization with the title of "Inter-American Conference on Social Security" and drew up a constitution for this organization.

Declaration of Santiago

The Declaration states that,

> To be able to enjoy fully the basic freedoms of thought, expression and activity, every man and woman must be afforded physical and economic protection against social and economic risks through properly organized social action,

and that,

> Society must find a new inspiration in a movement of solidarity of all men and nations to abolish poverty and secure the means of living in health and decency.

Economic and technical resources must be used to create the greatest possible material welfare on the basis of an equitable distribution of the fruits of production. Social security is a "genuine and rational economy of human resources and values" whereby the vigour of the present generation is conserved and built up, the way is prepared for future generations and the older generation is supported.

Social insurance, as an expression of social security, must eliminate the various risks to the earning capacity of the workers, must restore earning capacity lost or reduced and must supply the means of subsistence when gainful activity has been stopped or interrupted. Moreover, a social security program must be on a continental scale because the health and capacity of the workers of one American nation is the concern of them all. "A continental agreement entered into by the social security institutions will forge new links of solidarity" and it is declared that "the decisions of the Americas with a view to a new structure of social security represent a contribution to world solidarity in seeking the well-being of peoples."

Resolutions Adopted

The Governments of the American nations are recommended to promote legislation to establish as comprehensive a system of social security as possible. This system should include compulsory insurance at the sole cost of the employer against industrial accidents and occupational diseases, compulsory sickness insurance, provision for invalidity, old-age and death, aid for the involuntarily unemployed and services for the protection of maternity, childhood and adolescence. It should be extended to cover agricultural workers, domestic servants, the self-employed and intellectual workers.

Moreover, the various schemes which are in course of development in each country should be integrated on a national basis and social assistance should be co-ordinated with social insurance. Representatives of employers and workers designated by their respective organizations should participate in a consultative and advisory capacity in the administration of social security. The permanent Committee described below should study the best methods of assuring the technical and functional co-ordination of the bodies administering social policies.

Other resolutions deal with the financial organization of social insurance, the question of pharmaceutical benefits, the unification of biostatistical data on an international basis and the maintenance of the insurance rights of mobilized persons.

Constitution of Conference

Under the Statute which places it on a permanent basis, the Conference is to be an agency of co-operation with membership open to representatives of Governments, social security and insurance institutions and central advisory and technical councils concerned with social security and insurance. Provision is also made for a Permanent Committee whose duties are to give effect to the resolutions and recommendations of the Conference, to prepare the sessions of the Conference and in general to contribute to the attainment of the purposes of the Conference. The Committee consists of one regular member and at least one substitute member appointed by each Government represented in the Conference. In addition, the following may join the Com-

mittee at their own request: a tripartite delegation appointed by the Governing Body of the International Labour Office, the Director of the Office, the Director-General of the Pan-American Union, and the Director of the Pan-American Sanitary Bureau. The Director of the International Labour Office will keep the Conference and Committee informed of international developments in the field and will inform the Governing Body of the Office, from time to time, of the work of the Conference and Committee.

WAGE AND SALARY CONTROL IN THE UNITED STATES

ACTING under the authority of President Roosevelt's executive order stabilizing the cost of living in the United States (LABOUR GAZETTE, October 1942, p. 1140) James F. Byrnes, recently appointed Director of Economic Stabilization, has issued regulations dealing with the control of wages and salaries. Mr. Byrnes has authority to issue directives to any Federal department or agency in order to develop an over all economic policy to control inflation in the United States.

According to the new regulations, no wage or salary increases may be granted in the United States without the approval of the War Labour Board or the Treasury Department except in certain specified cases. Increases may be granted automatically in cases of individual promotions or reclassifications; individual merit increases within established salary rate ranges; operation of an established system of salary increases based on length of service; increased productivity under an incentive plan; and in the operation of an apprentice or trainee system.

Generally speaking, wages and salaries under $5,000 come under the authority of the War Labour Board, while salaries over $5,000 are to be administered by the Treasury.

After January 1, 1943, no private or public salary exceeding $25,000 a year, after deduction of federal taxes and certain other allowances, may be paid unless such salary is fixed by law. It is noted that income from sources other than salaries is not affected by the order, since control of such income could be effected only by taxation, which requires an act of Congress.

U.S. Treasury officials estimated that a person would have to make more than $67,000 a year to have $25,000 left after tax deductions. In Canada it is estimated that an unmarried man would have to earn over $156,000 to receive a net income of $25,000. Unearned income would have to reach a total of almost $470,000 to leave a net of $25,000.

"Little Steel" Formula Applied to Wages

In regard to wage stabilization, President Roosevelt's executive order of October 3 had declared that wages should not rise above the levels existing on September 15, except "to correct maladjustments or inequalities, to eliminate substandards of living, to correct gross inequities, or to aid in the effective prosecution of the war." Following a conference with the newly appointed Director of Economic Stabilization, the chairman of the War Labor Board announced that the President's order was being interpreted as an endorsement of the policies of the Board, including application of the "Little Steel" formula in wage cases.

The "Little Steel" formula arose from a decision of the Board in regard to a dispute between certain steel companies and their employees over the union's demand for wage increases. The Board granted to the 157,000 workers involved an increase proportionate to the rise in the cost of living between January 1, 1941, and May 1, 1942. Included in the decision was the declaration of a set of guiding principles to be used in evaluating future claims for wage increases, reading in part as follows:

> For the period from January 1, 1941, to May, 1942, which followed a long period of relative stability, the cost of living increased by about 15 per cent. If any group of workers averaged less than a 15 per cent increase in hourly wage rates during or immediately preceding or following this period, their established peace-time standards have been broken. If any group of workers averaged a 15 per cent wage increase or more, their established peacetime standards have been preserved . . . .
>
> Those groups whose peacetime standards have been broken are entitled to have these standards re-established as a stabilization factor.

The "Little Steel" decision was made on July 16, 1942, and the formula set down therein was applied in a number of subsequent cases, in some of which increases were granted, while in others, where previous adjustments had already brought wages to a level 15 per cent above January's rates, no changes were ordered. It is now announced by the chairman of the War Labor Board that this formula will continue to be applied under the "maladjustments" clause of President Roosevelt's order.

A certain resemblance in principle may be seen between Canada's policy of giving a bonus to compensate for increases in the cost of living and the American "Little Steel" formula for allowing increases proportionate to the rise in the cost of living. However, in the

United States wage adjustments are made only on the basis of individual applications to the War Labor Board, no machinery having been established linking wage changes automatically with fluctuations in the cost of living index.

Pirating of Workers Forbidden

An order designed "to stop the pirating of workers with promises of exorbitant wages" has been issued by the U.S. War Labor Board, acting under authority of President Roosevelt's executive order.

The new order states that the hiring of an individual at a wage rate "in excess of the rate previously established in the plant for employees of similar skill and productive ability within the classification in which the individual is employed" is a "wage increase" within the meaning of the President's stabilization order.

The order continues: "If a wage rate for a job classification has not theretofore been established by the employer for the plant involved, the rate shall be fixed at a level not exceeding that which prevails for similar classifications within the area, unless a higher rate is approved by the National War Labor Board."

The Board explained that the second clause of the order was designed especially to prevent wholesale raiding of existing war plants when a new war plant, such as a shipyard or aircraft factory, gets ready to start production.

PROPOSALS OF BRITISH TRADES UNION CONGRESS FOR EDUCATIONAL REFORM

THE Memorandum on Education containing the proposals for post-war educational reform drawn up by the General Council of the British Trades Union Congress was approved at the annual meeting of the Congress in September.

The Memorandum is a comprehensive document considering such questions as the relation of education to industry, adult education, health supervision, teacher training, administrative machinery and private and denominational schools. It gave most attention to post-primary education but declared that the Board of Education should be responsible for all stages of the educative process from nursery school to adult classes.

In this Memorandum the Trades Union Congress recommended that all types of secondary education should be governed by "a single code" with a common school-leaving age of 15, to be raised later to 16. It urged the development of schools offering several kinds of secondary education to replace the present single-type schools. It made proposals for extending technical education, providing half-time schooling in day-continuation schools for 16- to 18-year-olds and establishing residential colleges for adult education. To ensure equality of educational opportunity, the T.U.C. suggested that all fees for secondary education should be abolished and maintenance allowances provided for students. It asked that the system of granting university scholarships be revised and extended "until the principle of free and universal provision is applied to the universities themselves". Arrangements should be made to enable selected students to study abroad particularly in the Dominions and the United States. It approved of direct grants to technical colleges, art schools and other special schools, and to voluntary play centres and nursery schools.

Technical Education and Apprenticeship

In advocating a wide extension of technical education and its organization on a regional rather than local basis, the T.U.C. Memorandum declared:

> Industrial questions should not be allowed to determine educational policy. Let the greatest possible educational advance be secured; then let industrial practices be adapted to the new educational situation.

It proposed that industry be given a voice in determining technical education policies and recommended the appointment of local and national advisory councils representing management, labour and educational authorities. These three groups should also plan industrial training schemes. It was suggested that apprentices and trainees should be bound not to their employer but to the body responsible for the training scheme so that they could move from one employer to another for different types of training. The present position of employers allowing apprentices to go to school would be reversed and the schools would allow apprentices to go to work. The Memorandum asserted that vocational guidance, whether carried out by local education authorities or the Ministry of Labour, must be regarded as a specialized and full-time job and be co-ordinated with placement services. Special attention should be given to technical education in rural areas and better provision made for art teaching which must not be entirely directed towards industrial use. The student should be free to choose between cultural and industrial art.

Continuation Schools

The scheme of day-continuation schools for employed young people under 18, established by the Education Acts of 1918 and 1921 but now largely inoperative, should be extended, the Memorandum declared. The present minimum attendance of two half-days a week should be gradually increased to ensure at least half-time education for all from 16 to 18 years of age. The tendency to over-emphasize technical education in continuation schools "where young people train for work instead of for life" was condemned. The function of the continuation school was to provide general education which would prepare workers to take their place as citizens in a democracy and to make intelligent use of their leisure time. Day-continuation schools should become community centres, combining educational and recreational activities.

The development of an adequate youth service with full utilization of existing voluntary organizations was recommended. The activities of voluntary organizations in the field of adult education should also be fostered and regional consultative machinery set up to co-ordinate their work with the activities of local education authorities and universities. In addition to formal academic education for adults, a wide variety of activities on the borderline between education and intelligent recreation should be provided. More residential colleges like Ruskin College should be established for adults and short-term courses ranging from three to six months arranged. The Government was asked to give a lead to employers in granting leave of absence to workers wishing to attend these courses.

Other recommendations had to do with health services, special schools for handicapped children organized on a regional rather than a local basis, the revision of the teacher training system and the scale of teachers' salaries and the questions of private and denominational schools and religious education.

FACTORY CONDITIONS IN GREAT BRITAIN

Annual Report of the Chief Inspector of Factories

THE importance of the work of the British Factory Inspection Service to the war effort was stressed by the Chief Inspector of Factories in his annual report for 1941. He declared:—

> We are still convinced from our experience in this and the last war that, if the maximum production is to be obtained, the general requirements of the Factories Act must be observed and that the prevention of accidents, proper ventilation, heating and other physical conditions and reasonable hours of work are essential to a continued war effort.

The report gives a clear picture of working conditions in Britain during the second full year of war. It indicates the steps taken to meet the new problems created by longer working hours, more night work, the extended employment of women and such emergency measures as rationing, the black-out and the dispersal of factories. Special reference is made to the extension of personnel and welfare work and the provision of factory canteens, and it is reported that more employers are realizing the close connection between these matters and production figures.

War conditions necessitated an increase of 47 in the inspection staff in 1941 and the appointment of thirteen Canteen Advisers. The Chief Inspector expressed satisfaction with the co-operation between the medical, electrical and engineering inspectors and the ordinary district inspectors.

Accident Prevention

The increase over 1940 of 20 per cent in fatal accidents and 17 per cent in non-fatal accidents was considered due to the greater number of workers, particularly women and other inexperienced workers, and longer working hours. The report stated that:—

> the main increase is in accidents to adult women—a sign that during this year not only did women take up a great share in the work of the making of munitions, but they also took up their share of the dangerous processes in these industries.

Accidents to women between 1938 and 1941 increased by 192 per cent compared to 42 for men and about 20 for young persons. Almost two-thirds of the increase for women occurred in the engineering and light metal trades including aircraft and machinery. Nevertheless, the report states, "there is no evidence that in general women are more prone to accidents." In fact the Inspectors reported that women, being tidier and more cautious, are usually safer workers. About 180 women suffered accidents caused by their hair catching in machinery. The Chief Inspector believed that adequate fencing of machinery was the solution to this problem and that compulsory wearing of caps was only a secondary precaution and very difficult to enforce.

Since factory accidents cause from 20,000 to 30,000 workers to be constantly off duty and mean a loss of over 50 million man-hours a month, the Chief Inspector made a strong plea for accident prevention measures. He urged that managements enlist employee co-operation by forming safety committees and suggested that the new production committees concern themselves with accident prevention. Works Safety Officers should take advantage of the training courses available for them and employers should give them a status with sufficient power to put safety measures into effect. Foremen must be made aware of their responsibility under the Factories Act to train and supervise young persons on dangerous machines. A warning was issued against short-sighted policies which might prevent the expenditure of labour and materials on guards for machinery.

Welfare Work

Employers have had to give greater attention to personnel management and welfare supervision both inside and outside the factory but many employers still needed to be convinced of their value in terms of production.

Although the Government has power under the Emergency Regulations to compel employers to appoint welfare officers, the Chief Inspector declared that "good personnel management is not simply a matter of appointing special officers . . . but the spirit underlying it is the all-important factor." The Government had arranged three-month training courses for welfare officers to replace the peace-time two-year course. The value of welfare work in reducing absenteeism was stressed. "The best method of dealing with absenteeism," he declared, "is the prompt interviewing of the absentee by an officer of the personnel management department and, where necessary, his subsequent appearance before a committee of fellow-workers."

Ventilation and Heating

Special ventilation problems have arisen from black-out measures, extended night work, the construction of bomb-proof rooms and the dispersal of factories to buildings not designed for industrial purposes. At first the problem was to convince those responsible of the necessity for special ventilation measures, but later the limited supply of equipment added to the difficulties. Stress was laid on the great importance of the best possible ventilation particularly for processes producing excessively high temperatures or glare. Strong condemnation of the practice of relying on air changes per hour to neutralize the ill-effects of toxic dust and gases was voiced:—

> While this method has, in the past, been accepted by this Department in a few cases, notably in some cases of the doping of aeroplanes, where the provision of localized exhaust draught could not be adopted, the general principle has never been accepted. I am quite convinced that the success of the industries of this country in combating lead poisoning and other diseases due to dust or fumes, has been, in a large measure, due to the insistence of this Department that the dangerous substances should be removed by localized exhaust draught applied at the point of origin and so designed that the dangerous substance is not allowed to enter the air of the room.

In regard to the campaign for fuel economy, the Chief Inspector warned that

> reduction in the heating of shops where persons are employed on fine or sedentary work would only result in a loss of output that will far outbalance the saving on fuel, quite apart from the lowering in vitality that will result in the workers concerned.

Lighting

Good lighting is, in the words of the report,

> an important aid to production both indirectly —in preventing eyestrain, reducing accidents and as a general amenity of working conditions, and also directly—in speeding up the processes and avoiding spoiled work.

The Chief Inspector reported that as a result of the enforcement of the Factories (Standards of Lighting) Regulations since February 1, 1941 (LABOUR GAZETTE, June, 1942, p. 678), "both management and workers are now becoming much more alive to the handicaps of bad lighting conditions and less willing to accept them."

Already the new wartime factories and a majority of the larger factories have reached the required lighting standards despite the shortage of labour, delays in obtaining equipment and the need for maintaining production during alterations. Factories where lighting is really bad and the work is of national importance have received first consideration in the application of available resources.

Economy in the use of labour, materials and fuel should be secured by making the best use of existing equipment and by planning installations to avoid re-wiring. Re-arrangement of lighting points and the use of suitable modern reflectors can improve lighting without increasing fuel consumption. Fluorescent tube lighting was commended for its fuel economy and reduction of glare and shadows; but the cost in labour and materials of installing it must be considered. The beneficial results on production of light-coloured surroundings and of maintaining lamps and fittings in a clean and good condition were stressed.

Health

The Chief Medical Inspector reported:—

> Despite all the wartime influences which would be expected to affect adversely the health of the worker I cannot say, speaking generally, that there is any reason to think that it has been so affected . . . it would be idle to think that workers in the heavy industries would be likely to retain their normal health if long hours are worked continuously.

The maintenance of the workers' health was largely due, he considered, to the provision of nutritious and reasonably priced meals for them in factory canteens.

To overcome boredom which is a potent factor in causing mental and physical fatigue, the Inspector suggested short holidays, more canteens, music in the workroom, and stimulation of the workers' interest by showing them where their jobs fitted into the whole scheme. In regard to women the Inspector declared that there was no indication that their health was being injured by war work. The number of women suffering injury to their female organs was not sufficient to justify a compulsory physical examination before employment. Employers were exercising commendable care in the types of work to which they assigned women. On the question of employment before childbirth, the Inspector considered that no hard and fast line could be drawn as to how long before confinement a woman should leave her employment. The nature of her work, the distance she has to travel, her general health and her personal approach to the problem must be considered. The four weeks' leave after childbirth required by law must be observed however, and women who have had children should not be employed on work that puts undue strain on the abdominal muscles.

The Inspector reported that there was no direct evidence that the health of young persons was being injured by the extended hours many were working. However, if adequate educational and recreational opportunities were provided for them it would be desirable to limit their hours to 44 a week.

Increases were reported in the number of cases of gassing, dermatitis and aniline poisoning from the handling of T.N.T., and other explosives, but the lead poisoning figures were the lowest since notification became obligatory, and anthrax cases were fewer, probably due to a reduction in the import of infected material. Twenty-nine women and twelve men contracted jaundice from handling T.N.T.

> The greater number of cases among the females cannot be attributed altogether to increased susceptibility, though there is reason to think that such exists, but rather to the greater number of women exposed to risk.

The view was expressed that the control of dermatitis depended on the co-operation of the worker and supervision of washing. Because of the detrimental effects of tuberculosis on the worker's earning capacity, a scheme for making a comprehensive survey to discover the disease in its early stages should be devised.

Progress was reported in medical supervision in factories despite the shortage of doctors and the conservatism of employers, and both workers and management had benefited. The advantages of the part-time works medical officer who can keep in touch with the clinical and social side of medicine were pointed out. It was suggested that senior medical students might be used in factories to meet the shortage of medical officers and to link medical education more closely with industry. The Inspector reported with satisfaction that it had been unnecessary to dispense with any statutory medical examinations required for certain classes of workers.

Hours

> By the beginning of 1941, the control of hours of employment of women and young persons, weakened for a brief period in the preceding year after the withdrawal from France, was again well established.

About 11,000 factories had emergency permissions to employ women and young persons over 16 at night or for more than 48 hours a week. This was an increase of about 5,000 over the previous year and indicated the extension of war industry and the gradual substitution of women and young persons for men whose hours are not regulated. The permitted hours were between 55 and 60 in less than half of these cases and the trend is towards a reduction of hours. It was pointed out that many employers secure permission for longer hours than are actually worked in order to be able to meet emergencies. Only about one-tenth of the permissions authorized shift systems which limit the hours to less than 48 although these hours, the report declared, may "in the conditions necessitated by war be regarded as the most favourable for the work-people." Unfortunately, public opinion and those who give contracts still associate reasonable hours with slackness or waste of man-power and as a result women in some factories are working nearly 60 hours and men considerably longer although the employers recognize that such hours are unremunerative and increase absenteeism. Several examples were cited of factories where a reduction of hours had increased or at least maintained production and reduced absenteeism.

Part-time work for women with domestic responsibilities was highly commended. The most popular system was one of morning and

afternoon shifts but some factories divided the day into three or four short shifts of four or five hours each. The alternate-day system was not so popular but was used if long journeys to the factory were necessary. Some part-time workers did the overtime hours after the regular workers left or assisted at canteens during the noon-hour rush.

A tendency to shorten lunch-periods and rest-breaks and to curtail the working day correspondingly was reported as a result of the establishment of canteens where the workers could get refreshments quickly and easily.

Canteens

Over 6,500 factories had canteens by the end of 1941, although only 2,800 were established in plants with over 250 employees subject to the Canteens Order passed in 1940. About 2,500 were in smaller factories and nearly 1,000 were established at docks and building sites. Their value in terms of production and employee morale is now being recognized by more employers and workers and very little compulsion has been necessary to secure their establishment. This change in attitude can be explained by such factors as "the tightening of rationing, the increased employment of women, and especially of married women, the operation of shift-systems, the adoption of shorter meal times to enable the worker to get home earlier, and the big scale transfer of workers to towns away from home."

Small plants, unable to establish canteens have met the problem by setting up joint canteens for several plants or securing admission to the canteen in a large factory nearby, or by using British Restaurants. The latter are useful only for day-shift workers and must be located close to the factory. Some small plants and building sites received food in insulated containers from British Restaurants.

The preliminary problems of establishing canteens such as obtaining food priorities, buildings, staff and equipment are now giving place to problems of management. Many firms appoint full-time canteen managers or leave the operation of the canteen to a firm of catering contractors. A few permit workers' committees to run them. The establishment of Works Canteen Committees was recommended to handle complaints and suggestions. It was suggested that canteen wardens be appointed to ensure smooth running and that training courses for managers be arranged.

Other sections of the report dealt with air-raid precautions and fire prevention, the provision of amenities for construction workers on remote sites and the payment of wages in the textile industry.

Compulsory Arbitration of Disputes in War Industries in South Africa

Special provision has been made in South Africa for the settlement of labour disputes in war industries. The wartime regulations, which were gazetted on January 28, 1942, provide that if a dispute interfering with war production or essential services develops in any industry, the Minister of Labour may appoint an arbitrator, whose award shall be binding for a specified period. The arbitrator may be appointed from among the officers of the public services or members of the wage board, and may rule on any subject covered by the Industrial Conciliation Act or Wage Act, after consultation with representatives of employees and management. The Minister may, however, suspend provisions of an award in favour of the provisions of a collective agreement.

Any person who initiates or takes part in a strike or lockout during the period between the appointment of the arbitrator and the expiration of the award is subject to penalty, and so also is a person who contravenes the provisions of an award or in any way interferes with the work of an arbitrator or inspector. If an employer pays a worker less than the wage required by an award, he will be required to pay to the proper authority the differences between the wage paid and that which should have been paid. The whole of this sum will be forwarded to the worker if he did not agree to accept less than the minimum remuneration or so agreed without knowing his rights.

Pre-war legislation relating to working conditions and the settlement of disputes was embodied mainly in two statutes of 1937, the Industrial Conciliation Act and the Wage Act, which replaced earlier statutes on the same subjects. In industries in which employers and workers were organized, encouragement was given to the parties concerned to determine working conditions by collective agreements and to settle disputes through joint industrial councils. In unorganized industries, wages and other conditions could be regulated by orders under the Wage Act and conciliation boards could be established to settle disputes. Arbitration could be resorted to at the request of the parties concerned but was not compulsory except in connection with disputes in certain public utilities (Labour Gazette, 1938, p. 755).

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for October, 1942

AT the end of October, 1942, War Emergency Training had completed two and a half years of operation. Since April 1, 1940, the gross enrolment in the program has been over 110,000 industrial workers; 29,616 tradesmen for the R.C.A.F.; 26,799 tradesmen for the Army and Navy. During the year 1942 the facilities of the program have been utilized by the Air Force to a greatly increased extent.

The character of the training given for industry has materially altered since October of 1941. At that time the enrolment in full-time pre-employment classes was 3,727 men and about 400 women. On October 31, 1942, the enrolment in these classes was 2,723 men and 1,672 women. The available supply of male trainees has been very much reduced and women are being relied on more and more to furnish the majority of the trainees in the various schools. The alterations in the age groups to be called for compulsory military service have also narrowed the field of potential trainees, as the program accepts for training only those in the compulsory age groups who have been rejected for medical reasons.

The reduction in the training period is particularly evident in regard to women, where the majority of the training courses last from two to six weeks. Inevitably, this type of training produces people who can only perform one job and are lacking in a wider range of skill. From the point of view of normal vocational training this is highly undesirable, but the emergent need for workers has left no alternative.

There has, however, been considerable expansion in the variety of training opportunities given. In addition to the basic types of training, there are classes for tool room improvers, industrial chemists, instrument makers, radio and electrical assemblers, laboratory technicians, draftsmen and mechanical drawing, inspectors, and time study. Training is also given in a variety of shipyard occupations, such as welders and burners, rivetting gangs, coppersmiths and pipe fitters, marine electricians, ships platers, shipwrights, etc.

Training of Women

Training is afforded women in an increasing variety of occupations and their subsequent employment in industry has proven extremely satisfactory. The following courses are attended by women: machine operators, bench fitters, assemblers, radio and electric work, inspectors, welding (arc and acetylene) aircraft sheet metal, aircraft wood working, aircraft fabric and doping, instrument making, industrial chemistry, drafting and drawing and laboratory technicians. Just recently on the Pacific Coast women have been enrolled for training in the shipyards as welders, burners and ship platers.

Training in Industry

When it became apparent that the source of supply of trainees for full-time pre-employment classes was becoming dried up, attention was given to expanding the training given for employed persons in industry, both by means of part-time classes and plant schools. There has been a remarkable increase in the former. On October 31, 1941, there was an enrolment of 549 employed persons in these part-time classes. On October 31, 1942, this enrolment was 4,217. This type of training is particularly valuable in assisting the promoting and up-grading of men and women from one occupation to another. It gives a chance to the most adaptable and ambitious workers to obtain a broader basis of skill and, if put into practice by industry on a sufficiently wide scale, will afford an excellent corrective to the highly specialized and narrow types of training which have to be given in the pre-employment schools. Up to the present, the majority of training given in these part-time classes is of a technical nature (including theory rather than practice) and is now carried on in a classroom rather than a shop. Blue print reading, the use of micrometers, verniers and precision instruments are among the subjects covered. The ship-building industry on the Pacific Coast particularly, has made extensive use of these part-time classes conducted on off-shift hours and attended by workers at present employed in the various yards. Instruction is given either by skilled personnel supplied by the yards, or by teachers supplied by War Emergency Training. For each trade in which training is given there is a trade committee composed of representatives of the yards and the unions. This committee outlines the syllabus of training, passes on the instructors, helps select the applicants and advises on the equipment necessary. Training is afforded in about a dozen different occupations pertaining to shipyard work.

The number of full-time plant schools in operation in industry continues to grow. Over fifty have now been approved and are being carried on by industry in co-operation with the War Emergency Training.

Training for Supervisors

A start was made during November on a new phase of supervision training under the title Job Relations Training. (*See* page 1238).

The following tables show in detailed form the statistics covering supervision training for the month of October.

(1) Trainees in Part-time Classes consist largely of employed persons who are being given training at the request of employers in war production who wish to up-grade their employees.
(2) Includes those graduates who, though actually placed prior to October 1, 1942, were not so reported until after October 1, 1942.

LIGHTING IN AUSTRALIAN FACTORIES

ON July 8, 1942, compulsory standards of industrial lighting were introduced in Australia by the National Security (Industrial Lighting) Regulations on the recommendation of various engineering societies and the Electrical Advisory Panel of the Ministry of Munitions to meet the wartime increase in night work and the need for improving working conditions to achieve maximum production. Factories (Standards of Lighting) Regulations were issued in Britain on February 1, 1941 (Labour Gazette, June, 1942, p. 678).

The regulations declare that all new lighting installations, alterations or extensions in any factory or plant in Australia must conform to the standards set forth in a schedule to the Order. Moreover the Minister of Labour and National Service may issue orders prescribing particular lighting standards for specified establishments. The Minister also has power to exempt indefinitely or for a limited time any owner or occupier of any premises from the standards in the schedule or in any order issued by him.

An owner or occupier who violates these regulations or orders under them may be prosecuted or his premises may be ordered closed by the Minister until his lighting equipment is brought into conformity with the stipulated standards. Both penalties may be imposed.

The standards in the schedule prescribe the number of foot-candles of illumination required for each type of industrial operation. At least 50 foot-candles are required for very fine work such as accurate precision work, fine engraving and tasks calling for rapid discrimination and response; 25 to 50 foot-candles for operations such as drawing, sewing on dark goods, and discrimination and inspection of fine details of low contrast; 15 to 25 foot-candles for fine machine work, fine assembling and sewing on light goods; 10 to 15 foot-candles for detailed office work, reading and ordinary bench work; 5 to 10 foot-candles for intermittent office work, large assembly work, packing and storing; and 2 to 5 foot-candles for lighting passages, stairways and spaces outside working areas.

Standards regarding the quality of the illumination are also laid down. They are designed to prevent glare, shadows and eyestrain and prescribe the types of reflectors or diffusing fittings to be used, and the maximum intensity permitted for lamps at different heights. The provision of ample contrast between the work and its immediate background by the use of differing colours or degrees of lighting is required.

The Industrial Welfare Division of the Australian Department of Labour and National Service has issued a pamphlet explaining and illustrating the regulations. It states that essential factories with the most pressing needs will have first call on the available electrical equipment, and installations already close to standard or in little-used sections or in premises not operating at night will be exempt from the Order to conserve labour and materials in the electrical industry.

Immigration to Canada, April-September, 1942

A decrease of 15·0 per cent in immigration to Canada is recorded in the statistical bulletin issued by the Immigration Branch of the Department of Mines and Resources for the six months' period of the fiscal year ending September 30, 1942. During this time 4,374 persons entered the Dominion compared with 5,145 in the same period a year ago.

With the exception of the number of persons entering Canada from the British Isles, in which there was an increase of ·7 per cent, decreases were recorded in all classifications, the largest being that of 50·9 per cent in the group "other races", followed by percentages of 25·7 and 19·0 respectively in the groups "Northern European races", and "United States."

Of the total, 4,374, those coming from the British Isles numbered 1,268, those from the United States, 2,979, Northern European races, 75, and "other races," 52. Adult males entering Canada totalled 1,340; adult females, 1,981, and children under eighteen, 1,053.

Occupationally, 109 males, 46 females, and 52 children were listed in the farming class; the labouring class comprised 119 males, 43 females, and 40 children; mechanics, 292 males, 92 females, and 70 children; trading class, 145 males, 161 females, and 51 children; mining class, 15 males, 6 females, and 3 children; female domestic servants, eighteen years and over, 230; under eighteen years, 25; "other classes", 660 males, 1,403 females, and 812 children.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Curtailment of Civilian Industry—National War Services Regulations—Pensions Schemes—Cost-of-Living Bonus—Labour Exit Permits—Farm Labour—Pilotage Rates—Minimum Wages in British Columbia—Alberta Teachers' Pensions—Workers' Health in Manitoba—Quebec Workmen's Compensation—New Brunswick Civil Service

THE Wartime Prices and Trade Board has issued a statement of policy and its first Order regarding the curtailment of civilian industry to release man-power for war industry and the Armed Forces. A new consolidation of the National War Services Regulations under which men are called up for military service has been published, and an amendment in the Regulations reduces the lower age limit for call-up from 20 to 19. Steps have been taken to co-ordinate the various pension and compensation schemes administered by the Government. Because the cost-of-living index has not changed by one point in the last three months, the National War Labour Board has announced that no further adjustment of cost-of-living bonuses will be made until February 15, 1943. Control over persons emigrating in search of employment has been established by an Order in Council requiring all persons over 16 except certain designated groups to secure Labour Exit Permits before leaving the country. Several Orders in Council have been passed to meet the shortage of farm labour in various places. War conditions have necessitated a further revision of British Columbia Pilotage District rates.

In the provincial field, British Columbia has issued six minimum wage Orders, and Alberta has amended its teachers' pension regulations. Manitoba has provided for medical examinations for certain classes of workers and Quebec has made an addition to its schedule of compensatable industrial diseases. In New Brunswick the Civil Service regulations were amended.

Dominion

Release of Man-power from Civilian Industries

As part of its general man-power policy the Government has directed the Wartime Prices and Trade Board to exercise the powers granted to it under the War Measures Act by P.C. 8528, November 1, 1941 (LABOUR GAZETTE, 1941, p. 1370), to curtail non-essential trades and industries so that as many as possible of the workers engaged in them may be transferred to more important work. On October 21 the Board issued a statement of its policy in this regard. The methods used will include restrictions on power, raw materials, production, distribution and labour. As a first step, obviously non-essential lines of merchandise will be eliminated and other lines will be standardized. Later, total production will be curtailed and in some industries production will be concentrated in a few plants. The actual transfer of labour will be under the jurisdiction of the Director of National Selective Service.

The first measure passed by the Board in carrying out this policy was Order 184, September 8, which came into effect on November 2. It requires permits to be obtained for the establishment of new businesses, the transfer of existing businesses or the production or distribution of new classes of goods or services.

Further details of the curtailment policy will be found in the regular articles on Price Control in the LABOUR GAZETTE.

National War Services Regulations

On September 16 a new consolidation (P.C. 8343) of the National War Services Regulations, 1940 (Recruits) was issued under the National Resources Mobilization Act and the War Measures Act. These regulations provide for the calling-up of men for compulsory military service. An amendment of September 30 (P.C. 8918), reduced the lower age limit for liability to service from 20 to 19.

Co-ordination of Compensation, Pension and Superannuation Schemes

Under an Order in Council of October 7 (P.C. 162/9150) passed under the War Measures Act and the Department of Finance and Treasury Board Act provision is made for consideration and control of all present and future pension and compensation schemes under Dominion legislation by the Treasury Board assisted by an advisory committee so

that overlapping and anomalies may be eliminated.

Pension and compensation schemes at present in effect which are covered by the Order include: (1) "war pension schemes" such as pensions paid to disabled members of the Forces or their dependents, workmen's compensation paid to employees of Government-controlled war plants and other wartime agencies, etc.; (2) "war compensation schemes" under which merchant seamen and salt-water fishermen receive compensation for loss of effects due to enemy action, loss of remuneration due to internment in a foreign country, etc.; (3) "general schemes" which were in effect before the war and under which superannuation, workmen's compensation and other benefits are paid to Government employees.

All proposals for the extension or amendment of existing schemes or for the establishment of new schemes must now be submitted with all necessary information to the Treasury Board which will submit them to Council. The Board will be assisted by a Pension Advisory Committee, consisting of representatives of the Canadian Pension Commission, the Treasury Board, and the departments of Pensions and National Health, Transport (Government Employees Compensation Branch), External Affairs and Finance, together with *ad hoc* members from any Department interested in a particular scheme. The Committee will review and consolidate existing "war pension schemes" and will review any other scheme referred to it by the Board except matters relating directly to the Pension Act.

Cost-of-Living Bonuses

The General Order regarding adjustment of cost-of-living bonuses, issued quarterly by the National War Labour Board under P.C. 5963 (LABOUR GAZETTE, July, 1942, p. 778), was gazetted November 7. It stated that since the cost-of-living index had not changed by a whole point between July 2 and October 1, no adjustments in cost-of-living bonuses could be made between November 15, 1942, and February 15, 1943, unless specially authorized by a War Labour Board on the application of employers or workers. The bonuses were last adjusted in accordance with the Board's Order of August 4, 1942 (LABOUR GAZETTE, August, 1942, p. 904).

Labour Exit Permit Order

This Order (P.C. 9011) was passed under the War Measures Act on October 1, and came into effect on October 20, its purpose being "to conserve Canadian man-power by establishing control over persons desiring to leave Canada for other countries in search of employment". It applies to all persons in the country over 16 except Government officials, aliens proceeding to their native country, artists, athletes, trade union officials, etc., who leave the country temporarily in pursuit of their calling, merchant seamen, wives accompanying their husbands and farm labourers going to the United States for seasonal work under special arrangements. No person to whom the Order applies may leave the country without a Labour Exit Permit issued by the appropriate National Selective Service Officer. Permits may be made valid for a definite or indefinite period, but if for the former they may be renewed. If endorsed with the words "The right to cancel this permit is reserved," they may be cancelled at any time.

Farm Labour

Because of the shortage of workers available to harvest the grain crop in Saskatchewan, a special Order in Council was passed on October 21 (P.C. 27/9591), under the War Measures and the War Appropriations Acts authorizing the Minister of Labour to pay the cost of transportation to and from Saskatchewan of persons ordinarily engaged in agriculture, retired farmers and students who were recruited in other Provinces.

During the past year a number of measures have been passed to relieve the general shortage of farm labour. Under the National Selective Service Regulations (LABOUR GAZETTE, September, 1942, p. 1021), persons employed wholly or mainly in agriculture may not enter other employment without permission, while under the National War Services Regulations the compulsory military training of such persons may be postponed. In addition the Dominion has entered into agreements with several of the Provinces under which it defrays half the cost, except for normal administration, of projects undertaken by the Provinces for increasing the supply of farm labour. An agreement with Ontario was concluded in 1941 under authority of P.C. 27/3191, May 6, and it was renewed under P.C. 3903, May 11, 1942. Several other Provinces have since taken advantage of an offer made by the Dominion to conclude similar agreements. The Dominion's entry into these agreements was authorized by the following Orders in Council under the War Measures and the War Appropriations Acts: P.C. 37/7359, August 19 (Manitoba and Saskatchewan), P.C. 40/7829, September 1 (British Columbia), P.C. 7871, September 3 (Alberta), and P.C. 46/9150, October 7 (Nova Scotia).

British Columbia Pilotage Rates

To meet war conditions, further adjustments in the pilotage rates for the British Columbia Pilotage District have been made by an Order in Council under the War Measures Act

gazetted October 31. The new rates which are effective from March 1, 1942, for the duration of the war, have been agreed upon after consultation between representatives of the United States Army Transport Service and the Superintendent of Pilots at Vancouver. Earlier adjustments in the rates for this District were made in May and December, 1941 (LABOUR GAZETTE, 1941, p. 958; March, 1942, p. 307).

A rate of $25 per pilot per day from the time of departure from a base to the time of return to it plus reasonable subsistence and travelling expenses has been set for pilotage duties in connection with war services not covered by the existing scale of rates laid down in By-law 5 of the District (LABOUR GAZETTE, 1929, p. 890). A charge of one cent per net registered ton and $1.25 per foot draught is to be levied on vessels entering or leaving Prince Rupert and embarking or disembarking a pilot at Georgia Rock. Both these rates are subject to the 25 per cent surcharge authorized last December on all pilotage rates in the District.

Provincial

Alberta Teachers' Retirement Fund Act

The regulations regarding payment of pension contributions by persons temporarily not engaged in teaching (LABOUR GAZETTE, 1941, p. 958) have been amended by an Order in Council gazetted October 31. Formerly only persons on leave of absence without pay or those who had enlisted in the Armed Forces of Canada or its Allies during a war were permitted to continue or make up their pension contributions during their absence. Now this privilege has been extended to persons absent for not more than five years through illness or any other circumstance beyond their control, to those attending university or serving as Members of Parliament or of the Provincial Legislature and to those employed as Provincial Civil Servants in duties relating to education or as teachers in any institution under the Alberta Department of Education, the University of Alberta or its affiliates.

British Columbia Male and Female Minimum Wage Acts

Under the Female Minimum Wage Act five Orders have been issued. Two Orders set minimum rates for the first time for women bus-drivers and for workers in shingle mills, two replace earlier Orders governing the manufacturing and fruit and vegetable industries; and one varies the Order applying to the hotel and catering industry. The fruit and vegetable Order under the Male Minimum Wage Act has also been replaced by a new Order.

Order 25 (1942) governing women workers in all manufacturing operations not covered by other Orders of the Board of Industrial Relations was gazetted October 22 and is effective November 2. It does not apply to fish canning, to apprentices indentured under the Apprenticeship Act or to handicapped and part-time workers whose employment at rates below the minimum has been permitted by the Board. It replaces Order 25 passed in 1935 (LABOUR GAZETTE, 1935, p. 635).

The basic minimum rates for experienced employees of $14 for a 48-hour week or 29½ cents an hour have not been changed. The length of the learning period has been drastically reduced in some cases and been made uniform for all classes of factories. Formerly it varied from six to 18 months. The beginner's rate in all cases is $8 rising by $2 every two months to the $14 minimum. Corresponding hourly rates for learners are 16⅔ cents for the first two months, 20⅝ cents for the next two, and 25 cents for the final two months. Under the Act not more than one-seventh of the employees over 18 in an undertaking may be paid learners' rates and they must hold a special licence authorizing their employment at these rates. The Order also stipulates that workers are to be paid regular rates for waiting time. Employers must pay their workers at least semi-monthly in accordance with the British Columbia Semi-Monthly Payment of Wages Act, and may not permit them to work more than the eight-hour day and 48-hour week specified in the provincial Hours of Work Act unless they have been granted permission to do so under the Factories Act or under the Female Minimum Wage Act where the Factories Act does not apply.

Order 46 (1942) and Order 47 (1942) gazetted September 24 and effective September 28 govern male and female workers engaged in canning, preserving, drying or packing any kind of fruit or vegetable and replace Orders 46 and 47 of July 2, 1937 (LABOUR GAZETTE, 1937, p. 869). The minimum rates remain unchanged but the overtime provisions have been altered and semi-monthly payment of wages is now required. Under both Orders workers must be paid for at least three hours in a day. Under Order 47 (1942) at least 85 per cent of the male employees in a plant must be paid a minimum of 38 cents an hour for all hours up to 10 a day. The other 15 per cent, including handicapped workers employed under a permit from the Board of Industrial Relations, may not be paid less than 28 cents an hour for the first 10 hours. Under the previous Order, the lower rate could only be paid to male

workers under 21 but not more than 15 per cent of the total male employees could be employed at the lower rate.

Order 46 (1942) stipulates that at least 90 per cent of the women workers in the fruit and vegetable industry are to be paid a minimum hourly rate of 30 cents for all hours up to 10 a day. The remaining 10 per cent, including handicapped workers employed under licence may not be paid less than 25 cents an hour for the first 10 hours a day. Both Orders 46 and 47 require employers to pay one and a half times the worker's regular rate for all hours over 10 and up to 12, and double the regular rate for all hours over 12 in a day. The earlier Orders only required one and a half times or double the minimum rates. As before, workers are to be given at least an hour's rest after not more than five consecutive hours of work unless 75 per cent sign a petition requesting a shorter rest period. In such a case, the employer may with the Board's approval grant the petition provided he does not reduce the rest period below a half-hour.

The usual winter season Order, No. 52L varying for resort hotels in unorganized territory the maximum hours' and overtime provisions of Order 52 applying to the hotel and catering industry (Labour Gazette, 1938, pp. 291, 622) was gazetted October 22 and is effective from that date until June 12, 1943. It is identical with Order 52J issued last fall (Labour Gazette, 1941, p. 1269). It differs from the summer season Order (Labour Gazette, July, 1942, p. 797) by reducing the maximum weekly hours permitted from 56 to 54 and requiring employers to pay a minimum of 37½ cents an hour for all hours over eight a day and 48 a week instead of time and a half. Moreover the winter Order permits employers to hire their workers under an approved "alternative arrangement" by which the employees are paid a fixed monthly wage of at least $25 plus board and lodging rather than the weekly rates imposed by Order 52. There is no such provision in the summer Order. Both require a 24-hour rest period in each calendar week unless some other arrangement has been approved by the Board.

Order 76, gazetted September 24 and effective September 28 establishes the same minimum wages for women bus-drivers in Vancouver and its environs as were prescribed for men by Order 70 (Labour Gazette, 1940, pp. 343, 690). The rates are 55 cents an hour for those working less than 40 hours a week and 50 cents for those working more. Women, however, are forbidden to work more than eight hours a day and 48 a week unless specifically authorized by the Board, whereas men are to be paid 75 cents an hour for all hours in excess of nine a day or 50 a week. Both Orders have the provision forbidding deductions for uniforms except on such terms regarding cost as are approved by the Board. Both also require payment for waiting time and semi-monthly payment of wages but these clauses are not identical as to detail. Women bus-drivers must be granted a 24-hour rest period in each week.

An earlier Order established the same minimum wages for women as were fixed for men in the road transport industry excluding passenger transport (Labour Gazette, 1941, p. 1110).

Order 77, gazetted October 22 and effective November 2, 1942, establishes a minimum rate of 40 cents an hour for all women engaged in the manufacture of shingles and also sets minimum rates for piece-work. These rates are identical with those prescribed for men under Order 62 (1941) (Labour Gazette, 1941, p. 959). The Order applying to women has two clauses not in the one for men. The first forbids them to be employed for more than eight hours a day and 48 hours a week unless permission has been granted under the Factories Act or under the Female Minimum Wage Act. The second requires employers to pay to them at least semi-monthly all wages due up to eight days before payment. This latter clause appears merely to reproduce the provision of the Semi-Monthly Payment of Wages Act, 1939, which applies to mining, manufacturing, construction and fishing.

Manitoba Public Health Act

By an amendment gazetted October 10 to the public health regulations, the Minister of Health and Public Welfare at the request of a medical officer of health may order the periodic physical examination of persons whose occupation is such that they would constitute a danger to public health if they were infected with any communicable disease. The Minister may also order periodic medical examinations for employees in any industry where they may be exposed to some unusual industrial hazard.

New Brunswick Civil Service Regulations

New Brunswick has amended its regulations issued under the Audit Act in regard to annual holidays with pay, sick leave and retiring leave for Provincial Civil Servants.

Quebec Workmen's Compensation Act

The Quebec Workmen's Compensation Commission by a regulation gazetted October 10 has added "inflammation of the synovial lining of the wrist joint and tendon sheaths" to the schedule of industrial diseases for which compensation is payable.

65552—6

ACTIVITIES OF UNEMPLOYMENT INSURANCE COMMISSION

Fourth Meeting of National Employment Committee—Former Provincial Employees Brought under Dominion Superannuation Scheme—Insurance Registration as at November 1—Unemployment Insurance Fund—Claims for Benefit—Quarterly Report of Employment and Selective Service Offices—Report of Employment and Selective Service Offices for September—Employment Conditions at End of October.

THE National Employment Committee, appointed under the Unemployment Insurance Act as an advisory body to the Commission, held its fourth meeting on Monday, November 2nd.

Commissioner R. J. Tallon, acting chairman of the committee, presided, and members present were: Mrs. C. H. Thorburn, O.B.E., Ottawa; Mrs. Florence Martel, Montreal, and Messrs. A. R. Mosher, Ottawa; E. R. Complin, Montreal, and J. C. G. Herwig, Ottawa. In addition to the members of the committee, Dr. Allon Peebles, executive director, Unemployment Insurance Commission, and Major A. M. Wright, director of rehabilitation, Department of Pensions and National Health, attended.

The committee gave consideration to, and finally approved, with some changes, the draft of a circular letter outlining the functions and procedures of the National Employment Committee, Regional Employment Advisory Committees and the Local Employment Advisory Committees. This circular, which will be sent out to the various committees as soon as possible, will form the basis for their future activities. It was the concensus of opinion at the meeting that the local, regional and national committees, which are advisory bodies on national selective service matters as well as employment and unemployment insurance, should function without delay. The acting chairman, Mr. Tallon, emphasized the fact that all these committees, which are purely advisory, could render valuable service in connection with informing their various communities on National Selective Service regulations and purposes and assisting in the solution of problems arising from these new regulations.

A report on publicity and public relations, particularly with reference to National Selective Service, was submitted by Dr. Peebles and referred by the committee to the director of National Selective Service.

Major Wright gave the committee a brief summary of steps which have been taken by the Rehabilitation Branch of the Department of Pensions and National Health to assist soldiers already demobilized and to plan and prepare for after-war conditions. It was agreed that the welfare officers of the Department of Pensions and National Health and the local and regional committees of the Unemployment Insurance Commission should work in the closest harmony on these matters.

The committee will meet again early in December.

Insurance Registration

Reports from local Employment and Selective Service Offices show that at November 1, 1942, 161,221 employers and 3,317,287 employees were registered. Of the latter, 2,647,925 were insurable and 669,362 were uninsured.

The insurable group consisted of insurable employees of registered firms and persons unemployed at date of registration whose last employment was insurable. The uninsured group consisted of employees of registered firms not coming within the coverage of the Act, and partners and proprietors of these firms, also women between the ages of twenty and twenty-four not engaged in insurable employment at the time of the recent registration.

The re-distribution of insurance records to local offices recently established has not yet not included in this report. (*See* tables on pp. 1356-6.)

Former Provincial Employees Brought Under Dominion Superannuation Scheme

Provincial employees taken over by the Unemployment Insurance Commission of the Department of Labour have been brought under the Dominion Government's superannuation scheme if they were contributors to a provincial superannuation plan. Under this arrangement these former provincial employees will receive credit for contributions made into any Provincial Government's scheme.

The majority of those affected were formerly employed by the Provincial Governments in the Employment Service of Canada. About 240 of these employees were selected through the Civil Service Commission to take up duties on the staff of the Unemployment Insurance

Commission. Their experience in employment service work was particularly valuable to the Unemployment Insurance Commission in the establishment and operation of a nation-wide employment service.

The provisions of Order in Council P.C. 23/9776 of October 28, 1942, dealing with this subject of superannuation are applicable to any Provincial employee taken over by the Unemployment Insurance Commission and still in the employment of the Commission on October 1, 1942, or who enters the service of the Commission prior to January 1, 1943. Under this order, if an employee is a contributor under a Provincial superannuation scheme he may be granted benefits on retirement under one of two alternative plans.

In one plan benefits under Provincial legislation are to be allowed to stand as deferred benefits while a contributor is employed by the Dominion Government. In this case, Dominion and Provincial service count jointly for determining kind of benefit, provided that the Province will grant a similar benefit. Also, if the Provincial scheme provides for refund of contributions with or without interest, on voluntary retirement, the Dominion will refund the employee's Dominion contributions

The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to September 30th.

The Miscellaneous column includes the following:

Contributions collected by Insurance Inspectors	$ 43,449 56
Contributions in respect of service in the Armed Forces	420 03
Miscellaneous	1,132 33
	$ 45,001 92

without interest even though the combined Provincial and Dominion service is less than ten years.

Under the other plan Provincial service will count in whole or in part for benefits under the Dominion Civil Service Superannuation Act as follows: (1) The whole of contributory service under a Provincial scheme on payment of contributions required under the Dominion Civil Service Superannuation Act; (2) the part of contributory service under a Provincial scheme which is paid for under the Dominion Civil Service Superannuation Act by transfer to the Dominion of the total contribution in respect of a Provincial employee.

In either case, the employee will be, for the purposes of the Superannuation Act, a permanent Dominion employee on transfer and automatically will become a contributor under the Dominion Act.

In the event of a re-transfer of an employee to the Province, the Dominion will pay the Province double the contributions made by the employee to the Dominion fund together with 4 per cent simple interest on the understanding that the Dominion service shall count for the purposes of the Provincial scheme.

If an employee is not a contributor to a Provincial scheme he is to be considered as a temporary employee and not eligible to come under the Dominion Superannuation scheme until such time as he may be made permanent in accordance with Dominion Rules and Regulations. Also, while temporary he will be required to contribute to the Retirement Fund in accordance with existing Regulations.

Claims for Benefit

The amount paid in claims for unemployment insurance benefit during the period from February 1 to September 30, 1942 was $262,174. In this period, 19,090 claims were received for adjudication at the nine insurance offices of the Commission, of which 14,135 claims were allowed, 3,809 claims were not allowed, with 1,146 claims pending.

An analysis of the 3,809 claims not allowed by Insurance Officers reveals the following reasons for non-allowance: 1,437 claims under Section 28 (i) with insufficient contributions; 111 claims under Section 28 (ii) in which 58 applications were not made in the prescribed manner, and 53 of the claimants were not unemployed; 78 claims under Section 28 (iii) in which 45 claimants were not capable of work and 33 claimants were not available for work; 4 claims under Section 43 (*a*) for loss of work due to a labour dispute; 33 claims under Section 43 (*b*) (i) for refusal of an offer of work; 28 claims under Section 43 (*b*) (ii) for neglect of opportunity to work; 1 claim under Section 43 (*b*) (iii) for failure to carry out written directions; 2,099 claims under Section 43 (*c*) in which 462 were disqualified because they were discharged due to their own misconduct, and 1,637 were disqualified for voluntarily leaving without just cause; 3 under Section 43 (*d*) for being under 16 years of age; 2 under Section 43 (*e*) for being inmates of prison, etc.; 13 under Section 43 (*f*) for being in class "O" contributions.

Appeals and References

During the period from February 1 to September 30, 1942, there were 310 references and 20 appeals made by claimants to have their claims heard by Courts of Referees. In addition there were 3 references by Insurance Officers to Courts of Referees. Of the 333 references and appeals 243 were heard, 59 have not yet been heard, and 31 were withdrawn. The Courts of Referees disallowed 202 claims and allowed 41.

Report of Employment and Selective Service Offices for the Period July to September, 1942

Reports received from the Employment and Selective Service Offices during the quarter July to September, 1942, showed gains of 176·2 and 48·4 respectively in vacancies listed and placements effected, when compared with those reported by offices of the Employment Service of Canada in the corresponding quarter of 1941. All industrial groups except agriculture, logging and services recorded gains in both instances, with exceptional advances listed in manufacturing. Agriculture showed a loss in both vacancies and placements, while both logging and services showed advances in vacancies but declines in placements. All provinces registered noteworthy expansions.

From the chart on page 1312, which accompanies the article on the work of the Employment and Selective Service Offices for the month of September, it will be noted that the curve of vacancies in relation to applications took a decidedly upward course during July, August and September while the curve of placements followed an incline during July and August then showed a downward tendency in September, the level at the close of the quarter being much higher for vacancies but much lower for placements, than those shown at the end of the corresponding period last year. The increase in the first instance was due to National Selective Service Regulations under which it is necessary for employers seeking workers and persons desiring employment to obtain permits from Employment and Selective Service Offices. During the period July to September 1942, there was a ratio of 97·7 vacancies and 48·6 placements for each 100 applications for employment, as compared with 74·8 vacancies and 69·3 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 5,413, of applicants registered 5,541, and of placements effected 2,692 in contrast with a daily average of 1,960 vacancies, 2,619 applications and 1,813 placements in regular and casual employment during the same quarter of 1941.

During the three months July to September, 1942, the offices reported that they had referred 254,110 persons to positions and had effected a total of 207,236 placements, of which 188,638 were in regular employment and 18,598 in casual work. Of the placements in regular employment, 137,578 were of men and 51,060 of women. A comparison with the corresponding period of 1941 shows that 139,631 placements were then made, of which 89,032 were in regular employment and 50,599 in casual work. Applications for employment during the period under review were received from 284,303 men and 142,336 women, a total of 426,639, in contrast with the registration of 201,612 during the same period last year. Employers notified the offices during the quarter July to September, 1942, of 416,784 vacancies, of which 302,188 were for men and 114,596 for women, as compared with 150,886 opportunities for work during the corresponding period a year ago.

Report of Employment and Selective Service Offices for September, 1942

Reports received by the Director of Employment and Unemployment Insurance from Employment and Selective Service Offices during the month of September, 1942, showed an outstanding gain in business transacted, both when compared with the preceding month and with the corresponding month of last year, this computation being based on the average number of placements recorded daily.

Vacancies in September, 1942, numbered 241,038, applications 221,352 and placements in regular and casual employment 102,827. During the month the average daily placements effected, showed gains at 47 per cent and 46 per cent, respectively, over the previous month and over that of the corresponding period a year ago. The exceptionally heavy gains under both comparisons were attributable to the National Selective Service Regulations passed under authority of Order in Council P.C. 7595, which make it obligatory for employers seeking workers and persons

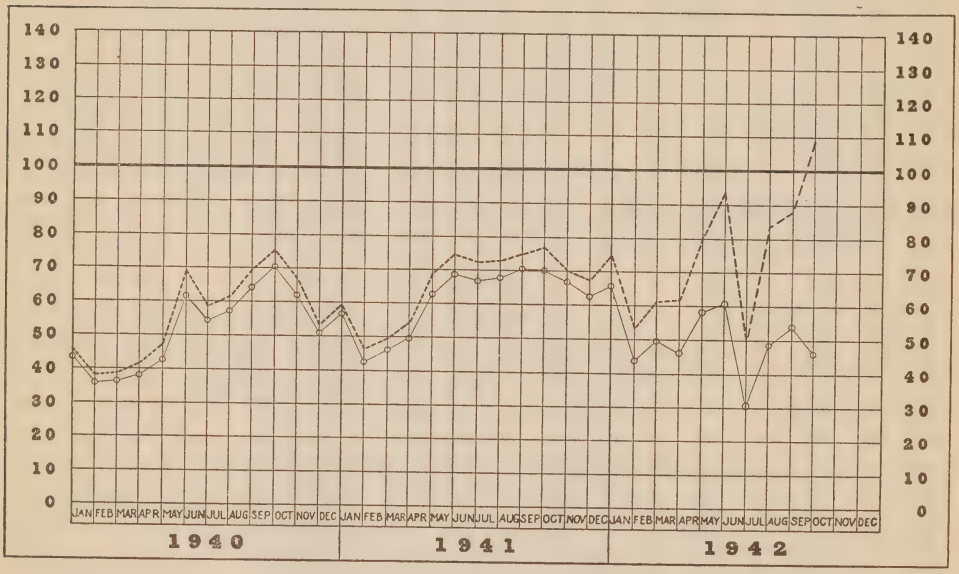
desiring employment to notify Employment and Selective Service Offices. The permit system, also established under these regulations, necessitated the opening of a number of new offices and since the latter part of August employment offices have been opened at some seventy-eight additional centres in order to provide facilities for employers and workers to obtain necessary permits. With the exception of a moderate decrease in agriculture, all industrial divisions showed increases in placements over the preceding month, the gain in manufacturing being exceptionally large. There were, however, in addition important increases in services, trade, logging and construction. When comparison is made with September a year ago, all industrial divisions excepting agriculture and services showed placement advances and, as in the former comparison, the increase in manufacturing was most pronounced. There were in addition, noteworthy gains in trade and construction.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratio of vacancies notified and



of placements effected for each one hundred applications for work registered each month at Employment and Selective Service Offices throughout Canada. It will be seen from the graph that the trend of the curves of vacancies in relation to applications took a decidedly upward course while that of placements followed a downward trend. The ratio of vacancies to each one hundred applications was 108·9 during September, 1942, in contrast with 88·3 in August and 76·7 during September last year and the ratio of placements to each one hundred applications shows 46·4 as compared with 53·6 in August and 70·1 at the close of September, 1941.

ments in regular and 699 in casual employment.

During the month the offices referred 135,763 persons to vacancies and effected a total of 102,827 placements. Of these, the placements in regular employment were 97,334, of which 66,391 were male and 30,943 female, while placements in casual work totalled 5,493. The number of vacancies reported by employers was 170,853 for men and 70,185 for women, a total of 241,038, and applications for work numbered 221,352, of which 134,997 were for men and 86,355 for women. Reports for August, 1942, showed 83,027 positions available, 94,018 applications made and 50,360 placements

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications———— Vacancies - - - - - - - - - Placements—o—o—o—o—o—o

The average number of vacancies reported daily by employers to the offices throughout Canada during September, 1942, was 9,642, as compared with 3,194 during the preceding month and with 2,065 in September a year ago.

The average number of applications for employment received daily by the offices during the month under review was 8,855 in contrast with 3,617 in August, 1942, and with 2,690 during September last year.

The average number of placements made daily by the offices during September, 1942, was 4,114 of which 3,894 were in regular employment and 220 in work of one week's duration or less, as compared with a total daily average of 1,937 during the preceding month. Placements in September a year ago averaged 1,886 daily, consisting of 1,187 placements effected. While in September, 1941, there were recorded 51,603 vacancies 67,239 applications for work and 47,130 placements in regular and casual employment.

The following table gives the placements effected by employment offices each year, from January, 1932, to date:—

Year	Placements		Totals
	Regular	Casual	
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536
1938	256,134	126,161	382,295
1939	242,962	141,920	384,882
1940	320,090	155,016	475,106
1941	316,168	191,595	507,763
1942	313,810	69,409	383,219

Nova Scotia and Prince Edward Island

During the month of September, 1942, Employment and Selective Service Offices in Nova Scotia and Prince Edward Island received orders for 304 per cent more workers than in the preceding month, and 413 per cent more than during the corresponding month of last year. There was an increase also in placements of 135 per cent, when compared with August, and 125 per cent in comparison with September, 1941. The increase in placements over September a year ago was due to substantial gains in manufacturing, construction and trade, with somewhat smaller increases in transportation and mining. Small decreases were reported in logging, services and agriculture. Placements by industrial divisions included:—manufacturing, 2,004; construction, 1,835; services, 1,349; trade, 703; transportation, 230, and mining, 146. During the month 4,376 men and 1,693 women were placed in regular employment.

New Brunswick

The demand for workers as indicated by orders received at Employment Offices in New Brunswick, during September, was 140 per cent greater than in the preceding month, and 608 per cent above the corresponding month of last year. There was an increase also in placements of 43 per cent, in comparison with August, and of 166 per cent in comparison with September, 1941. All industrial divisions, except services, participated in the increase in placements over September of last year, the gains in manufacturing, construction and trade being the most pronounced. Industrial divisions in which most of the placements were effected during the month were:—manufacturing, 769; construction, 752; services, 600; trade, 429; transportation, 247, and logging, 132. There were 2,027 men and 833 women placed in regular employment.

Quebec

There was an increase of 216 per cent in the number of positions offered through Employment Offices in the Province of Quebec during September, when compared with the preceding month, and of 278 per cent in comparison with the corresponding month of last year. Placements were 48 per cent higher than in August and 34 per cent above September, 1941. When comparing placements by industrial groups, during the month under review, with September of last year, a substantial increase was recorded in manufacturing with smaller gains in construction, trade and mining. The improvement in these groups was partly off-set by a large decrease in services and moderate losses in logging and transportation. Placements by industrial divisions included:—manufacturing, 8,604; construction, 4,184; logging, 2,369; services, 1,815; trade, 994; mining, 557 and transportation, 415. Placements in regular employment numbered 14,217 of men and 4,288 of women.

Ontario

Orders received at Employment Offices in Ontario during September called for 197 per cent more workers than in the preceding month and 394 per cent more than during the corresponding month of last year. Placements also showed an increase of 144 per cent over August, and were 163 per cent in excess of September, 1941. The large gain in placements over September a year ago was mainly due to an increase in manufacturing, although moderate gains were reported in trade, logging, services, construction and transportation; the only decrease of importance was in agriculture. Placements by industrial divisions included:—manufacturing, 21,976; services, 5,795; construction, 3,847; trade, 3,305; logging, 2,630; transportation, 1,534; mining, 799, and agriculture, 448. During the month 25,146 men and 14,149 women were placed in regular employment.

Manitoba

There was an increase of 130 per cent in the number of positions offered through Employment Offices in Manitoba during September when compared with August and 256 per cent in comparison with September, 1941. Placements showed an increase of 50 per cent over both the preceding month and the corresponding month of last year. When comparing placements by industrial divisions, during the month under review, with those of September, 1941, gains were recorded in manufacturing, trade, transportation, services, construction and mining, but were off-set in part by a decline in agriculture. Industrial divisions in which most of the placements were effected during the month were:—services, 1,533; manufacturing, 1,387; construction, 836; trade, 730; agriculture, 400; transportation, 305, and mining, 167. There were 2,939 men and 1,646 women placed in regular employment during the month.

Saskatchewan

Positions offered through Employment Offices in Saskatchewan during September called for 76 per cent more workers than in the preceding month, and 174 per cent more than during the corresponding month of last year. Placements were 96 per cent higher than in August and 61 per cent above September, 1941. The gain in placements

* 171 placements effected by offices now closed.

over September a year ago was mainly due to increases in trade, services, manufacturing and transportation, being off-set in part, by declines in construction and agriculture. Placements by industrial divisions included:—services, 1,483; trade, 868; agriculture, 785; manufacturing, 427; construction, 299, and transportation, 231. During the month 2,319 men and 1,441 women were placed in regular employment.

ALBERTA

Employment opportunities as indicated by orders received at Employment Offices in Alberta during September were 112 per cent greater than in the preceding month, and 296 per cent above the corresponding month of last year. Placements were 56 per cent higher than in August, and 119 per cent above September, 1941. Except for moderate declines in logging and agriculture, all industrial divisions showed gains in placements over September a year ago, the most noteworthy increases being in construction, trade, manufacturing, services and transportation. Industrial divisions in which most of the placements were effected during the month were:—construction, 1,444; services, 1,300; agriculture, 931; trade, 908; manufacturing, 905; transportation, 541, and mining, 262. Placements in regular employment numbered 4,118 of men and 1,789 of women.

BRITISH COLUMBIA

Orders received at Employment Offices at British Columbia during September called for 218 per cent more workers than in the preceding month, and 789 more than during the corresponding month of last year. Placements were 195 per cent higher than in August and 325 per cent in excess of August, 1941. All industrial divisions participated in the increase in placements over September a year ago, the most noteworthy advances being in manufacturing, construction, logging, trade and services. Placements by industrial divisions included:—manufacturing, 6,806; services, 2,868; construction, 2,678; logging, 1,561; trade, 1,543, and transportation, 1,021. There were 11,249 men and 5,104 women placed in regular employment during the month.

Employment Conditions at the End of October

Placement activities as reported by Employment and Claims Offices during the month of September, 1942, together with statistical summaries for that period, are covered by an earlier section of this report. Later reports indicate that conditions at the end of October were as follows:—

Potato digging and fall ploughing were almost completed in Prince Edward Island and the rest of the Maritimes. In the Annapolis Valley, picking of a good apple crop was finished and the gathering of root crops elsewhere was nearing completion. Movement of farm labour to other lines of work for the winter had begun. Fishermen also were in search of other employment, their seasonal operations completed except for small catches of cod, mackerel and halibut. The Irish Moss industry has been very active and profitable for many workers. Forestry and logging operations had begun in most woods areas; calls for skilled and unskilled men reached the hundreds, and, other than farmers and fishermen, the sources for bush-workers were very limited. Mining activity was very well sustained but an urgent need for underground men was felt in the New Glasgow area. Manufacturing plants were working at capacity in most centres, although in one or two places, shortage of materials was responsible for slackened activity. The supply of plant labour was adequate in most centres, but there were some local shortages. Slow progress was being made on construction projects throughout the area because of inadequate labour supply. A site was being sought for a new potato dehydration plant in Prince Edward Island. Extensions to airports, naval bases, barracks and shipyards provided for more work for bricklayers, carpenters, asphalt workers and timbermen than could be found. Transportation companies were very busy with shipments of coal and steel by rail, pulpwood and lumber by boat. The building of a railway branch line out of Campbellton, New Brunswick, gave employment to many labourers and skilled workers. Truck drivers were unusually busy moving the apple crop. There was a steady demand for workers in the service trades but the supply of suitable workers for these positions was constantly decreasing.

In Quebec, agricultural operations were concluded and many farmers had already entered lumber camps. A number of farm workers, who had gone west for the harvest, had returned to seek winter employment in their own localities. The logging industry was making the most pressing demands on all sources of labour supply. Many bushmen were already at work but the number required was far in excess of the available supply and woods operations were facing sharp curtailment. Mining generally was very active, although a shortage of experienced underground men was felt around Rouyn. Some expansion was being planned in the Thetford area. Manufacturing plants producing textiles, leather goods and food products, and the war industries generally, were in need of skilled workers and mill hands. Many more plants were employing women but the shortage of suitable production workers was only slightly relieved in most centres. The metal trades were especially short of skilled men and were planning to engage a large number of apprentices. In some localities, output of metal products was curtailed by shortage of materials. Pulp and paper production appeared to have been stabilized and the labour requirements of this industry were not expected to be excessive. Considerable turnover of certain skilled tradesmen occurred in the Levis Naval Yards, and in some shipyards shortage of materials was delaying the work. Construction work throughout the province was limited to extensions to existing plants and to Wartime Housing projects, although large projects were begun at Levis Naval Yards. A scarcity of plumbers, electricians and painters was reported from some projects nearing completion. Rail traffic, especially to the northern industrial area, was very heavy but there was little traffic on the river. The railway running trades were in need of workers in several occupations. Wholesale and retail trade was exceptionally good and the large establishments were beginning to expand staffs in anticipation of the Christmas rush. Salesgirls were in very heavy demand for the larger department stores. Since war industries continued to absorb all suitable labour, the continuous acute shortage of hotel, restaurant, domestic and institutional help was unabated.

Agricultural activity in Ontario was mostly of a routine nature and there was little demand for labour. Students and farmers who were sent west for harvesting were beginning to return. Many farmers were seeking winter work in war plants and, to a lesser extent, in logging camps. Practically all fruit and agricultural crops had been gathered and a very good yield was reported. Fall ploughing was resumed after being held up by wet weather. The shortage of labour for logging operations continued to present a serious problem, despite some movement of farm workers to this industry. Many camps were reported to be working at half capacity. Mining activities throughout Northern Ontario were severely handicapped by insufficient man-

power, although gold mining had been sharply curtailed by diversion of labour to base metal properties. Attention was centred primarily on providing workers for the nickel industry. The majority of manufacturing plants were in full operation although experiencing a shortage of skilled plant help. Most canneries were approaching the end of seasonal work, some being already closed and their staffs absorbed by other industries. The metal trades, especially, continued to report a pressing need for skilled labour, both for plant operation and for utilization in training inexperienced new employees. The upward trend in the employment of women in these trades continued and the expansion plans of several firms contained provision for extended use of females. A further uptrend in building activity was reported, though this consisted mainly in additions to defence properties, large plants with war contracts, and Wartime Housing developments, rather than new construction. Carpenters and labourers were urgently needed generally and in some localities there were critical shortages of specialized workers such as bricklayers, pipefitters and reinforcing steel men. Highway construction, except for several small projects connected with defence properties, showed signs of coming to a close. Some highway labour was transferred to Labrador and Alaska. Extra railway gangs continued to absorb all available men, and transportation companies generally were short of help in a number of occupations, such as brakemen and expressmen. In the communications section there were many calls for female telegraph messengers. A number of orders were received from the delivery trades, particularly for taxi and truck drivers, employers showing increased tendency to accept female applicants. Some districts reported a surplus of managers and executives, due partly to the curtailment of non-essential industries, but many of these applicants were of advanced age. While the turnover of clerical workers continued to be large, the supply was fairly satisfactory. Employers appeared to be giving more attention to methods of absorbing untrained workers of this class. Potential applicants for work in institutions, hotels and restaurants, and private houses, continued to prefer work in war plants and the acute scarcity of this class of labour was unrelieved.

In the Prairie Provinces, harvesting was practically finished but closing operations were at a standstill due to snow and rain. An excellent crop was reported. Co-operative volunteer efforts locally and excursions of harvest help from the East had provided valuable assistance with the latter half of the crop. The demand for harvesters had practically ceased. Many requests were being received for farm hands for the winter but suitable men were slow in appearing. A very good beet crop was practically all at the refineries. Fall logging operations generally were somewhat retarded by a serious shortage of bush labour. Some movement of harvesters to bush camps had begun but farmers generally were showing a tendency to prefer winter work in war plants. Base metal miners were planning extended development but were seriously short of underground labour, despite some diversion of men from gold mines where production was being curtailed. Coal miners were in heavy demand and output was being retarded by insufficient man-power. As yet there was only a slight tendency for harvest labour to move to the mines. Alberta oil fields were planning expansion and were in need of drillers and well labour. Most manufacturing plants were very active. Pulp and paper mills and sawmills, however, were curtailing seasonal activities. Aircraft and munitions plants were changing to new production and were not expecting extensive staff additions for several months. Women were being employed in a wider variety of factory occupations. Meat packers and flour mills were unusually busy but were seriously in need of plant help. Sugar refineries expected a record output. Except for defence projects, building activity declined somewhat, and was confined to small repairs and alterations. No large new contracts were reported and the shortage of building labour, though still serious, was slightly alleviated. Most towns reported retail trade as relatively unchanged with good prospects due to a bumper crop. Wholesale trade was definitely on the uptrend and dealers were augmenting staffs. A few staple commodities were scarce. All lines of trade were somewhat short of staff. Some hotels and restaurants closed through lack of help and applicants for housework continued to be as scarce as ever. The shortage of teachers in Saskatchewan remained critical.

Harvesting was completed in British Columbia and there was no demand for labour other than a few winter farm hands. Fishermen reported fair catches of chum salmon, and gill netters and herring boats were operating in a limited way. Logging operations were beginning in most areas with the serious shortage of bush workers slightly abated in the larger camps. Outlying camps, however, still faced a critical labour shortage. All coal and base metal mines were seriously undermanned and were calling for large numbers of muckers and labourers. There appeared to be no immediate prospect of supplying these men. Manu-

facturers, in general, did not report any unusual developments, but there were openings for skilled and unskilled plant help in practically all lines. Sawmills were nearing the end of their seasonal cuts and were beginning to release men to smaller mills and to bush camps. Machine shops and foundries continued to ask for skilled men. The aircraft industry was expanding its facilities for absorbing inexperienced male and female workers. There were good work opportunities in the Prince Rupert shipyards for single men in many trades but no available accommodation for families. In the Vancouver shipyards, however, the demand for skilled tradesmen, except arc welders, had ceased. Some defence building contracts outside of the large urban centres were behind schedule because of shortages of carpenters and labourers, although a surplus of carpenters was reported in Vancouver. Labourers were needed for the Prince Rupert-Terrace Highway. Railways continued to require labourers and were placing women in some departments. Bus companies and steamship lines reported heavy traffic. The number of requests for institutional, hotel and restaurant, and domestic help was increasing steadily but very few persons were accepting this class of work.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting September 1, was 13,142, the employees on their payrolls, numbering 1,795,411, compared with 1,780,704, in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for September was 2,272, having an aggregate membership of 380,304 persons, 0·8 per cent of whom were without employment on October 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of September, 1942, as Reported by Employers

A further rise in industrial activity was indicated at the beginning of September, according to the Dominion Bureau of Statistics latest survey of employment and payrolls. The 13,142 co-operating firms had an aggregate working force of 1,795,411 persons, 14,707 more than the number they had employed at August 1. This increase of 0·8 per cent (which was accompanied by that of 2·7 per cent in the reported weekly payrolls), was rather below average for the season; it was also smaller than that noted at September 1 in any immediately preceding year. This is the third occasion since the early spring on which the indicated expansion has been less than normal; the seasonally-adjusted index showed a slight falling-off at May 1 and June 1, and again at the date under review. On the whole, however, the additions to the reported working forces during the summer have exceeded the normal, seasonal gains, although they have not been equal to those indicated in the same period in 1939, 1940 and 1941. Thus as the organization of the industrial war effort proceeds, and the supply of available labour diminishes, the rate of expansion in employment has appreciably slackened. Nevertheless, industrial activity generally continues at an unprecedentedly high level.

Further and larger advances were reported in manufacturing at September 1, 1942, the co-operating establishments having added 16,843 men and women to their personnel since the beginning of August. Of this number, 8,600 were taken on in iron and steel

plants and 4,050 in the vegetable food group. Smaller, but important increases were indicated in chemical, textile, electrical apparatus, non-ferrous metal, tobacco and pulp and paper factories. On the other hand, animal food and lumber mills were seasonally slacker; there was also a falling-off in clay, glass and stone works. The general increase of 1½ per cent in factory employment was accompanied by that of 3·6 per cent in the reported weekly payrolls.

Among the non-manufacturing classes, logging showed a seasonal gain. Little general change took place in communications, while the trend in mining, transportation, construction, services and trade was downward. The largest losses were in mining, notably of gold.

The unadjusted index number of employment (1926=100) stood at 179·3 at September 1, 1942. The August 1 figure was 177·9, while that at September 1, 1941, was 162·7, 10·2 per cent lower that at the latest date. The indexes at September 1 in immediately preceding years were as follows: 1940, 131·6; 1939, 119·6; 1938, 115·1 and 1937, 123·2.

Since the increase at September 1, 1942, was rather below average, the seasonally-adjusted index showed a fractional decline, falling from

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

173·0 at the beginning of August, to 172·3 at the date under review.

As already stated, there was an increase of 2·7 per cent in the weekly salaries and wages disbursed at September 1 by all firms furnishing data. The payrolls aggregated $52,361,441, as compared with $50,970,885* at August 1. The per capita earnings averaged $29.16 at the latest date, while in the period of observation in the preceding month, the average had been $28.62.* Although the gain was partly due to the payment of the cost-of-living allowance at the higher rates authorized under P.C. 5963 for the pay periods following August 15, it continues the movement which with only one exception has been indicated from the institution of the payroll statistics in the early spring of 1941. The exception was at January 1, when the general observance of the holidays lowered the reported earnings.

When the statistics for financial institutions are included, the latest survey shows that the 1,859,559 persons in recorded employment at September 1 received the sum of $54,273,332 for services rendered in the last week in August. This was a per capita average of $29.19. At August 1, the establishments co-operating in the nine leading industrial groups —manufacturing, logging, mining, communications, transportation, construction, services, trade and finance—reported an aggregate payroll of $52,888,570*, paid to 1,843,911 men and women. Their average earnings were $28.68.*

A comparison of the course of employment and payrolls in the last twelve months shows that the increase of 10·2 per cent in the number of persons recorded as at work in the eight leading industries has been accompanied by that of 23·3 per cent in their weekly payrolls; in the nine main industrial divisions, including finance, the gain in employment has amounted to 9·9 per cent, and in payrolls, to 22·6 per cent in the year.

From June 1, 1941, to September 1, 1942, there was a general increase of 17·3 per cent in industrial employment, accompanied by a gain of 35·4 per cent in the reported payrolls. The reasons previously given for the much greater advance in the index of earnings than in that of employment may again be stated: (1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average, and in addition, there is in many cases a considerable amount of overtime work, and (2) the extension of the system of paying a cost-of-living bonus to the majority of workers; the statistics of the present report reflect the recent rise in this allowance, authorized for pay periods falling after August 15. However, the bonus had previously been increased since its institution. In certain cases, higher wage-rates have also been awarded. In spite of these factors beneficially affecting the typical worker, the average earnings of the individual, as a result of the dilution of labour, have not shown advances commensurate with those in the index of aggregate payrolls. Where the latter has risen by 35·4 per cent, the index of per capita earnings has increased by 15½ per cent since June 1, 1941. The Bureau's index of the cost of living has risen from

*Revised.

[1] Revised.

110·5 at that date to 117·4 at the beginning of September, or by 6·2 per cent.

The expansion in employment and aggregate payrolls in manufacturing has greatly exceeded that indicated in industry as a whole, the number employed in factories having risen by 28·3 per cent between June 1, 1941, and September 1, 1942, accompanied by a gain of 48·7 per cent in the index of payrolls. The per capita earnings have risen by 16·1 per cent in the same interval. The factors mentioned above as influencing the all-industries statistics operate with greater force in the case of manufacturing.

The durable goods industries have shown particularly noteworthy increases in employment and payrolls in the period from June 1, 1941; the index in the former has risen to 141·8, and that in the latter to 168·7 at September 1, 1942. In the non-durable goods class, the latest index number of employment stood at 116·3 per cent of the June 1, 1941, figure, and that of payrolls, at 127·7.

In considering the marked variations which are found to exist in the average earnings of those employed in the different industrial classes, it must be borne in mind that the sex distribution of workers therein is an important factor, being also frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or over-time may

also considerably influence the reported aggregates and averages.

The Course of Wartime Employment

The publication of the statistics at September 1, 1942, presents an opportunity of discussing the effect of three years of warfare upon the Canadian industrial scene, without having to make allowance for the seasonal factors which to a greater or lesser extent affect the value of comparisons of the situation in different months of the year.

During the first 12 months of the war, recorded employment increased by 10 per cent. Following the events climaxed by the fall of France, the rate of industrial activity was greatly accelerated, and by September 1, 1941, the general index had risen to a point 36 per cent above that at the outbreak of hostilities. Further pronounced expansion in succeeding months brought the index to a new maximum of 179·3 at September 1, 1942, when it was 49·9 per cent above the September 1, 1939, index of 119·6. Despite the unprecedentedly high level recently indicated, it is noteworthy that the curve of employment is flattening, the distance between the 1942 and the 1941 curves being considerably less than that between the 1941 and the 1940 curves. This flattening is an obvious development, in view of the magnitude of the industrial war effort with its consequent depletion of the labour market, together with the absorption of over half a million men in the armed forces.

The monthly surveys show that since the outbreak of war, close on to 600,000 men and women have been added to the working forces of the firms* furnishing current statistics of employment; other establishments may also have increased their personnel, although it is highly probable that recent events have, on the whole, reacted unfavourably upon the smaller businesses. The addition of approximately 600,000 workers to the numbers in recorded employment, together with the enlistment of over 500,000 men in the various services in the space of three years, has occasioned profound changes in the industrial and occupational distributions of the Canadian population. The principal sources from which these accessions to the industrial payrolls have been drawn are as follows: (*a*) unemployed workers, (*b*) the own-account and small employer classes, (*c*) agriculture, (*d*) homemakers and other women, (*e*) adolescents, who under normal conditions would probably continue at school for a year or two longer, or possibly for a lengthier period. At the

*i.e., those ordinarily having 15 employees and over.

other end of the scale, many older men and women are undoubtedly prolonging their period of service beyond the usual retirement age. The armed services, in addition to drawing upon most of the above reservoirs for recruits, have of course also taken very large numbers of persons from their former employment in industry.

An extremely large proportion of the persons employed by industry since the outbreak of war have been absorbed by manufacturing establishments, in which the index of employment has risen by 87 per cent between September 1, 1939, and September 1, 1942. The gain in the non-manufacturing classes as a

* Revised.

whole has amounted only to 12·6 per cent in the three years.

Within the manufacturing group, employment in the production of durable goods has shown particularly impressive expansion. The index has risen from 100·4 at the beginning of the war, to 261·0 at September 1, 1942, or by 160 per cent. Even greater than this gain, has been that of almost 239 per cent in employment in iron and steel plants. The non-ferrous metals and electrical apparatus divisions have likewise afforded work to a substantially greater number of persons now mainly producing to meet war-time demands. The lumber and clay, glass and stone groups, two of the remaining three in the durable goods category, have shown increases in the last three years which are considerable, though on a much smaller scale than those previously mentioned.

The advances in the non-durable goods classes have resulted partly from the manufacture of commodities required in the prosecution of the war and in the equipment and maintenance of the armed forces in Canada and abroad, but are also partly due to increased civilian consumption consequent upon an exceptionally high level of employment and payrolls. As a result of these factors, employment in the production of non-durable goods as a whole has risen by 42½ per cent in the 36 months. Much of the gain has taken place in the chemical group, the manufacture of explosives and ammunition constituting a very important part of the war program. Excluding chemicals, the growth in the inedx for the light manufacturing classes between September 1, 1939 and September 1, 1942, amounts only to 28·6 per cent, rather than to 42·5 per cent already given for the non-durable goods as a whole. Manufacturers of textile, food, pulp and paper and other products have all provided employment for many men and women than were engaged in these industries at the outbreak of war. The production of miscellaneous manufactured products has also greatly increased, with the development of plants producing various types of scientific equipment, which, owing to the mixed origin of the component parts, are classed industrially in the miscellaneous group.

At September 1, 1939, the number of persons employed by the co-operating manufacturers throughout the Dominion comprised 50·7 per cent of the total employees reported by establishments in the eight leading industrial groups —manufacturing, logging, mining, communications, transportation, construction, service and trade. By September 1, 1942, this proportion had grown to 62·6 per cent of the much larger number of persons employed in the eight industries in the Dominion.

In the non-manufacturing industries, employment in logging, communications, transportation, services and trade was at a considerably higher level than at September 1, 1939. In each of these except trade, the improvement has been progressive, although the rate of gain from 1940 to 1941 generally exceeded that since indicated. On the other hand, employment in trade in recent months has slackened, partly as a result of the stringent labour market, and partly because the virtual disappearance of various lines of manufactured goods from the market has removed the need for the services of salesmen. Nevertheless, the index number of employment in trade at September 1, 1942, was higher by 12·9 per cent than at that date in 1939; in 1941, the gain over 1939 had amounted to 16·8 per cent.

Mining, in which the index at September 1, 1941, had risen to a point 8·1 per cent higher than in the first 12 months of the war, has since been curtailed, showing a fractional decline at the latest date from the September 1, 1939, figure. Building and railway maintenance work were more active at the close of the third year of the war than at the beginning, but highway work showed a falling-off. This was largely due to the postponement of all but essential work until the end of the war, while in 1939 a considerable program of unemployment relief work was under way. A very large proportion of the employment now being afforded in building and also in road construction and maintenance directly results from the war effort.

Each of the provinces has shown considerable expansion since the outbreak of hostilities, and in the more highly industrialized provinces of Quebec, Ontario and British Columbia being particularly great. However, the gains elsewhere indicated have also been substantial.

The growth of industrial employment in the eight leading industrial cities in the last three years has rather exceeded that generally reported in the Dominion. An index constructed for these centres taken as a unit, stands at 184·8, as compared with the Canada index of 179·3 at September 1, 1942. At the beginning of September, 1939, the cities' index was 109·4, while that in the country as a whole was 119·6. Where 39 per cent of all those on the staffs of the co-operating establishments belonged in these eight cities when war was declared, some 44 per cent of the much greater Dominion total are now employed therein, a concentration which accounts for the acute housing situation in the larger cities.

Employment and Payrolls by Industries

Manufacturing.—For the eighth successive month, employment and payrolls* in manufacturing showed expansion; the advance in employment substantially exceeded the usual increase at September 1 in pre-war years, but was smaller than at that date in either 1940 or 1941. The distribution of the gains also differed from the normal; those in the durable goods group were considerably above average, while those in the production of non-durable goods were less than usual for the season.

Information was furnished by 7,341 manufacturers, whose staffs aggregated 1,123,270; as compared with 1,106,427 at August 1; this was an increase of 16,843, or 1·5 per cent. The amounts disbursed in weekly payrolls rose from $32,169,579* at the beginning of August to $33,333,167, at September 1; the difference was $1,163,588, or 3·6 per cent. As already stated, the payment of the higher cost-of-living bonus contributed largely to this important increase, but there were also variations in earnings due to overtime work and to vacations; in some instances, the latter factor caused a falling off in the payrolls, but in a greater number of cases, the resumption of operations following vacations resulted in higher salaries and wages. The per capita average rose from $29.08* at August 1, to $29.68 at the date under review; that at September 1, 1941, was $26.22.

The index number of employment in manufacturing at the date under review stood at 215·6 per cent of the 1926 average. The August 1 figure was 212·4, while that at September 1 of last year was 181·4. The latest index was the maximum in the record. Since the increase from the preceding month was above normal, the seasonally adjusted index showed a further upward movement, rising from 207·7 at August 1 to 209·6 at the beginning of September.

The concentration of workers in the iron and steel group continued at the date under review, when the co-operating establishments reported the addition of 8,611 men and women to their personnel. The increase was the largest at September 1 in the 22 years of the record, but was rather smaller than that indicated in immediately preceding months. The manufacture of electrical apparatus and non-ferrous metal products also showed substantial advances. Considerable expansion was indicated in vegetable food factories; there were smaller but nevertheless important gains in leather, pulp and paper, rubber, textiles, chemical and miscellaneous non-metallic mineral groups, and in miscellaneous manufactured products. In food and textile plants the improvement was not equal to that usually noted at the beginning of September. Animal food, lumber and clay, glass and stone plants, on the other hand, released employees; the seasonal losses were rather above normal.

The unadjusted indexes of employment in manufacturing at September 1 in recent years, based on the 1926 average as 100, are as follows:—1942, 215·6; 1941, 181·4; 1940, 139·4; 1939, 115·3; 1938, 113·8; 1937, 121·2 and 1936, 105·9. For September 1, 1941, 6,958 manufacturing establishments had reported 943,117 men and women on their staffs.

The persons in recorded employment in manufacturing establishments at September 1 received the sum of $33,333,167 for services rendered during the week preceding; this represented a pay envelope of $29.68 for the average worker. The latter figure was higher by 60 cents than that indicated at August 1, 1942, and exceeded by $3.46 the average of $26.22 at September 1, 1941.

Based on the weekly salaries and wages paid by the co-operating establishments on or about June 1, 1941, as 100 per cent, the index of payrolls at September 1, 1942, stood at 148·7, as compared with 143·5* at August 1, 1942, and 110·8 at September 1, 1941. The increase of 34·2 per cent in the reported payrolls at the date under review as compared with twelve months earlier, considerably exceeds that of 18·9 per cent in the number of persons employed by the co-operating manufacturers. As elsewhere given, the main reasons for this disparity, are first, the growing concentration of workers in the more highly paid heavy industries, together with a considerable amount of overtime work for such classes, and secondly, the wide application of the method of meeting the increased cost-of-living by the payment of a bonus under the terms of P.C. 8253 of October 24, 1941, together with the general increases in this allowance since its institution, notably that authorized for the first pay period after August 15 of the present year. The importance of the first of these factors is emphasized by the fact that the September 1 index number of payrolls in the durable goods group stood at 168·7, or 50½ per cent higher than at the same date of 1941, while that in the non-durable goods, at 127·7, showed an increase of 16·6 per cent; the index of employment in the heavy industries in the same period has risen by 31·4 per cent, as compared with the gain of just over seven per cent in that for the light manufacturing industries.

*Revised.

During the period for which statistics of payrolls are available, there have been especially noteworthy increases in the salaries and wages reported in the non-ferrous metal, chemical, iron and steel, miscellaneous manufactured products, electrical apparatus and equipment and beverage industries. These gains have been associated with important advances in employment; in most instances, however, the percentage rise in the latter has been proportionately less than that in the payrolls, with the results that, despite the continued dilution of labour, the average per capita earnings in these industries are higher than they were at the beginning of September, 1941. This statement, indeed, applies to the majority of manufacturing classes.

Logging.—There was a moderate seasonal increase in employment in the bush at the beginning of September; the gain was rather below average for the time of year. Data were received from 437 firms having 43,764 employees at September 1, as compared with 42,165 in their last report. Employment generally was brisker than at the beginning of September in any other year of the record. The index, at 147·5, was 5·7 per cent higher than at the same date in 1941, while there was a rise of 26·3 per cent in the reported weekly payrolls in the same period. The earnings aggregated $1,007,680 at September 1, as compared with $968,955 at the beginning of August.

The per capita average earnings at the date under review were $23.03, five cents more than the average paid on or about August 1; it is probable that many of the additional workers were not employed throughout the pay period covered in the survey, a factor which tends to lower the indicated earnings in a period of seasonal change, and which no doubt largely offsets the effect of the increased cost-of-living bonus authorized from August 15. In considering the figures of aggregate and average earnings in logging, it must be recalled that they do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations.

Mining.—Further curtailment of mining operations was reported at September 1; the 427 employers then furnishing information had a combined working force of 77,954 persons, 2,564 fewer than at the beginning of August. All three branches of the industry released workers; there was a small decline in quarrying, with a moderate reduction in the coalfields, and a considerable loss in the extraction of metallic ores, notably of gold.

The index of employment in the mining group at September 1 was 166·8, as compared with 181·6 at the same date in 1941. This was a decline of 8·9 per cent.

The payrolls reported at the latest date amounted to $2,756,576, as compared with $2,789,149 indicated in the preceding period of observation. The falling-off was thus 1·2 per cent, while that in the number of employees was 3·2 per cent. As a result of this disparity in the percentage rates, the per capita average earnings were higher, rising from $34.64* at August 1, to $35.36 at the beginning of September.

Communications.—Slight improvement of a seasonal character was recorded in the communication group as a whole at September 1. The increase, which was rather smaller than usual for the time of year, took place in the telegraph division, telephones releasing a small number of persons. The reported employees numbered 28,604, and their weekly payrolls amounted to $806,305. At August 1, the number of workers on the staffs of the communications division was given as 28,512, earning $785,657. The increase in employment was 0·3 per cent and that in salaries and wages, 2·6 per cent. The per capita average rose from $27.56 at August 1, to $28.19 at the first of September. Based on the 1926 average as 100, the latest index of employment was 107·1; this was five per cent higher than at September 1, 1941. The index number of payrolls has risen in the twelve months by 11·9 per cent.

Transportation.—There was a contraction in transportation as a whole; street railway operation, cartage and storage and shipping and stevedoring were more active, but employment in steam railway operation was quieter. The general decline in the group was contra-seasonal. Nevertheless, employment was brisker than at September 1 in any other year since 1929. The latest index was 110·0, compared with 105·9 at September 1, 1941. The staffs of the 563 firms and branches furnishing returns totalled 138,675, as compared with 139,151 at August 1. The weekly salaries and wages disbursed at September 1 were given as $4,830,002; this was one per cent higher than the August 1 payroll of $4,784,427. The average per capita weekly earnings rose from $34.38 at August 1 to $34.83 at the date under review. As compared with September 1, 1941, there was an increase of 3·9 per cent in employment and of 10·6 per cent in the index of aggregate payrolls in transportation.

Construction and Maintenance showed a seasonal decline of about normal proportions, according to the experience of the years since 1920. Building and highway work were rather

brisker, but the construction and maintenance departments of the railways released employees. Statistics were tabulated from 1,500 contractors with a total working force of 184,865, as compared with 185,136 at August 1. This was a decrease of 271 employees, or 0·1 per cent. The reported weekly payrolls, however, were higher by three per cent. The latest aggregate was $5,097,890. The increase was partly due to overtime work, together with the payment of the cost-of-living bonus at a higher rate. The per capita average earnings rose from $26.72 paid at August 1, to $27.58 at the date under review.

The index in construction was lower than at the beginning of September of last year, when it stood at 153·9, as compared with the latest figure of 146·5. The decline amounted to 5·1 per cent while there was an increase of 13·3 per cent in the reported payrolls in the 12 months.

Services.—There was a contra-seasonal slackening in activity in services at September 1, when the 615 co-operating establishments reported 41,924 men and women on their payrolls, as compared with 42,197 in the preceding month. In spite of this loss in employment, there was a slight increase in the salaries and wages disbursed at the beginning of September. These aggregated $730,516, as compared with $728,511 at August 1.

As compared with September 1, 1941, there was a gain of 2·3 per cent in employment at the date under review; the increase in the reported payrolls in the 12 months was 11·6 per cent. The per capita average earnings, at $17.42 at the beginning of September, were higher by 16 cents than at August 1. At September 1, 1941, the average was $15.96. Attention must be drawn to the fact that in hotels and restaurants, as in logging, many of those employed receive board and lodging as part of their remuneration; the former division constituted some 62 per cent of the total reported in the service division as a whole at the beginning of September.

Trade.—There was a further falling-off in employment in trading establishments at September 1; the decline (the third in succession) was contra-seasonal in the experience of the years since 1920. A personnel of 156,355 was reported by the 2,198 co-operating employers, who had had 156,598 employees at the beginning of August. The payrolls disbursed by these employers rose slightly, from $3,796,846 at that date to $3,799,305 at September 1. This disparity in the trends resulted in a rather higher per capita average, which stood at $24.30 at the latest date, as compared with $24.25 in the preceding report.

The latest index number of employment in trade was 152·3 per cent of the 1926 base; this was lower by 3·3 per cent than that indicated at the same date in 1941, but there was an increase of one per cent in the year in the index of payrolls.

Financial Institutions.—Statistics were tabulated from 755 banks, trust companies, insurance companies and other financial institutions, whose staffs aggregated 64,148, an increase of 941 as compared with August 1. The salaries and wages paid these employees amounted to $1,911,891, giving a per capita weekly average of $29.80, as compared with $30.34 in the last report. Employment in financial institutions was greater by 1·5 per cent than at September 1, 1941, while the index number of payrolls was higher by 5·5 per cent.

Employment and Payrolls by Economic Areas

Employment was brisker in all provinces except Manitoba and Alberta. The largest numbers added to the personnel were in Quebec, Ontario and British Columbia. The last-named also showed the greatest percentage gain. In all provinces except Prince Edward Island, industrial activity was at a higher level than at September 1, 1941. The aggregate weekly salaries and wages disbursed at the date under review were generally greater in all sections of the country. The per capita averages were also higher in each of the provinces than at either August 1, 1942, or September 1, 1941.

Maritime Provinces.—A contra-seasonal increase in employment was indicated in the Maritime Provinces at the beginning of September, when 942 firms reported the employment of 128,994 men and women, 1,354 more than at August 1. The index of employment stood at 172·2, as compared with 164·1 at the beginning of September, 1941. Nova Scotia and New Brunswick showed improvement, while there was no general change in Prince Edward Island.

Manufacturing afforded rather more employment in the Maritime Provinces as a whole; most of the gain was in pulp and paper and iron and steel plants, while animal food and textile factories were quieter. Logging, mining and trade also released employees. The other non-manufacturing classes reported greater activity; the advances in transportation and construction were considerable.

The weekly payrolls disbursed at September 1 amounted to $3,361,247, an increase of three per cent from the wage payments reported by the same firms at August 1. This considerable gain resulted in a higher average pay envelope, which rose from $25.58 paid on or about

August 1, to $26.06 at September 1, 1942. The average at the same date in 1941 had been $22.68. In the last twelve months, the index of payrolls in the Maritime Provinces has risen by 20·4 per cent, while that of employment has increased by 4·9 per cent. The number of persons on the payrolls of the 900 firms then furnishing data was 122,762.

Quebec.—Continued but smaller additions to the working forces were reported in Quebec; the 3,325 employers from whom returns were received had a staff of 563,858 persons at September 1, compared with 559,823 in their last report. This increase was smaller than that indicated at September 1 in any of the three immediately preceding years.

The weekly earnings paid on or about September 1 amounted to $15,571,233; the total reported at August 1 had been $15,144,027. There was accordingly a gain of 2·8 per cent in this comparison. The per capita average reported at September 1 was $27.62, 57 cents higher than that at the beginning of August, 1942, and $3.25 above the September 1, 1941, average of $24.37. The index number of employment, at 192·8, was 13½ per cent higher than at September 1 of last year. The increase in the indicated payrolls in the 12 months was 28·7 per cent.

Important expansion was reported in manufacturing at the date under review, there being considerable gains in iron and steel, textile and chemical plants, with smaller advances in lumber, rubber, tobacco, electrical apparatus and non-ferrous metal factories. Logging and trade also afforded more employment. On the other hand, transportation and construction released fairly large numbers of men, and there was a falling-off in communications and services.

At September 1, 1941, 3,159 establishments had reported a personnel of 495,220 men and women, an increase of 6,600 from August 1.

Ontario.—For the eighth consecutive month, there was an expansion in industrial activity in Ontario. The increase was not equal to that indicated at September 1, 1941, although it exceeded the usual gain at that date in the years since 1920. Data were tabulated from 5,665 firms having 742,879 employees, compared with 736,721 in the preceding month. This was a gain of 0·8 per cent. The reported payrolls were also higher, showing an increase of 2·3 per cent; the total was $22,458,720, as compared with $21,953,998 at August 1. The September 1 per capita average was $30.23, as compared with $29.80 at August 1, 1942, and $27.34 at the beginning of September, 1941. The index of employment, at 183·0 at September 1, reached a new maximum, being slightly higher than that of 181·5 at August 1, and 8·3 per cent above the September 1, 1941, figure of 169·0. The latest index of earnings was 19·5 per cent higher than a year ago.

The number of persons engaged in manufacturing operations in Ontario showed a substantial increase; the largest additions to the working forces were in iron and steel and vegetable food factories, some 3,900 and 4,000 men and women having been taken on in those industries, respectively. Smaller gains took place in the leather, pulp and paper, chemical, electrical apparatus, non-ferrous metal and miscellaneous manufactured products divisions. Lumber, textile, and clay, glass and stone plants, however, released some employees. In the non-manufacturing groups, gold mining, construction, services and trade showed curtailment, while transportation was more active. Little general change was indicated in logging and communications.

At September 1, 1941, 5,469 employers had reported an aggregate working force of 685,679, this was 10,845 more than the number they had employed at August 1, 1941.

Prairie Provinces.—Industrial activity declined in Manitoba and Alberta, but slightly gained in Saskatchewan at September 1. On the whole, there was a moderate recession in employment in the Prairie Area, but the payroll disbursements were higher. Returns were received from 1,813 employers with a combined staff of 193,556 men and women; this was 586 fewer than at August 1. The weekly salaries and wages disbursed at the beginning of September were reported at $5,614,147, 1·6 per cent higher than the sum of $5,523,814 distributed by the same firms at the beginning of August. The per capita average earnings also advanced, rising from $28.45 at August 1 to $29.01 at the date under review.

In the last 12 months, industrial employment in the Prairie Provinces taken as a unit has increased by 5·1 per cent, and there has been a gain of 14·3 per cent in the reported weekly payrolls.

Most of the contractions in employment in the Prairie Area at September 1, 1942, as compared with August 1 took place in railway construction and maintenance. Steam railway operation, services, logging and retail trade also released employees. On the other hand, manufacturing (notably of iron and steel products) was brisker; local transportation and storage, building and highway construction work and wholesale also showed heightened activity.

British Columbia.—Firms in British Columbia reported further additions to their working forces at September 1; although the improvement was on a smaller scale than that recently

65552—7½

recorded, it was above-average for the season of the year, resulting in the establishment of a new high index. Mining, transportation and trade reported a falling-off, but in other industrial groups the trend was upward. There were moderate gains in logging, communications and services, with larger advances in manufacturing and construction. In the former class, there was further important expansion in iron and steel and food factories; the increases in non-ferrous metal, electrical apparatus and miscellaneous non-metallic mineral plants were smaller. Considerable curtailment, on the other hand, was noted in lumber mills.

The working force of the 1,388 employers furnishing data in British Columbia rose from 162,378 in the preceding month, to 166,124 at the beginning of September. The payrolls disbursed by these establishments at the latter date aggregated $5,356,094, as compared with $5,084,157 at August 1. The latest per capita average was $32.24, 93 cents higher than in the preceding report. At September 1 of last year, 1,324 firms had made returns, showing an aggregate staff of 138,400. The contents of the typical pay envelope had then been $27.48. In the last 12 months, the index of payrolls has risen by 39·1 per cent while that of employment, at 179·4 at September 1, 1942, was 19·8 per cent higher than at the same date of 1941. The latest figure is the highest in the employment record of over 21 years.

Employment and Payrolls by Cities

Industrial activity increased in each of the eight cities for which statistics are currently tabulated. The largest advances were in Montreal, Quebec, Toronto and Vancouver; those in Hamilton and Winnipeg were also considerable, while the improvement in Ottawa and Windsor was moderate.

The sums distributed in these centres in weekly payrolls at September 1 were decidedly higher than at August 1. In most cases, the gains in the earnings were relatively greater than those in the number of employees, so that the per capita averages were also higher than at August 1. In Hamilton, however, the per capita average was slightly lower, partly as a result of a loss in earnings during vacation. In the eight centres, employment and payrolls were considerably higher than at September 1, 1941.

Montreal.—Further important advances were reported in Montreal. These took place mainly in manufacturing, tobacco, textile, chemical, electrical apparatus and iron and steel plants showing the largest gains. The trend was also upward in trade, but transportation and construction were quieter. Little general change took place in the remaining industries.

Statistics were tabulated from 1,938 employers with 264,655 men and women on their staffs at September 1, compared with 260,980 at the beginning of August. The weekly payrolls disbursed by these establishments at September 1 aggregated $7,624,179; this was an increase of 3·8 per cent over the amounts distributed by the same firms on or about August 1. The gain in the number in recorded employment was 1·4 per cent. As a result of this disparity in the percentages, there was a considerable rise in the per capita average; at $28.81 at September 1, this was 67 cents higher than that reported at the beginning of August, being also the highest in the record going back to June 1, 1941.

The index of employment has risen by 15 per cent in the last 12 months, accompanied by a gain of 30 per cent in the reported payrolls in the same period. The per capita average earnings at September 1, 1941, had averaged $25.45. The 1,833 firms then reporting had employed 229,674 persons; the index was then much lower, having been 151·6, as compared with 174·4 at the date under review, the peak figure in the record.

Quebec City.—There was an increase of 1,579, or 4·8 per cent, in the number of persons on the payrolls of the 230 employers furnishing data in Quebec. They reported 34,227 workers at September 1; the indicated weekly payrolls aggregated $843,384. As compared with $781,297 disbursed at August 1, this was an increase of 7·9 per cent. The weekly average, at $24.64, was the highest to date. The August 1, 1942 average had been $23.86, while the September 1, 1941, figure was $21.53. There were important increases in employment at the date under review in manufacturing, mainly in iron and steel and chemical factories. Construction was also more active, and minor improvement was shown in trade.

The 219 firms furnishing statistics for September 1, 1941, had a combined working force of 25,821. The index of employment then stood at 186·2, as compared with 239·8 at September 1, 1942. This is an increase of 28·8 per cent. The gain in the indicated payrolls in the 12 months was 50·5 per cent.

Toronto.—Employment in Toronto resumed its upward movement at September 1, when the 1,996 co-operating firms reported a working force of 235,774 men and women, as compared with 232,372 at August 1. Curtailment was indicated in building construction, services and trade; there was a slight gain in transportation, while manufacturing showed considerable expansion. There were large increases in iron and steel works, together with smaller advances in printing and pub-

lishing, chemical, electrical apparatus, miscellaneous manufactured products and other classes.

The weekly payrolls reported by the employers furnishing data amounted to $7,073,892, as compared with $6,836,989 paid on or about August 1, 1942. The index of employment at the latest date, at 183·6, was the highest in the record, exceeding by 15·1 per cent the September 1, 1941, index of 159·5. The reported payrolls have risen by 28·7 per cent in the 12 months.

The per capita weekly earnings averaged $30 at September 1, as compared with an average of $29.42 at August 1, 1942; the September 1, 1941, figure had been $26.80. The number of persons then employed by the 1,888 co-operating establishments was 204,647.

Ottawa.—The trend of employment in Ottawa continued upward, although the gain was not large. The 248 employers making returns had 21,526 employees, 51 more than in the preceding month. The reported salaries and wages aggregated $555,633, a per capita average of $25.81. This was 37 cents higher than the August 1 average of $25.44, while the September 1, 1941, figure had been $23.41. Slight changes only were indicated in the various industrial groups. Trade and communications afforded rather more employment, while manufacturing, construction and services were quieter.

The index of employment in Ottawa, at 163·4, was 4·2 per cent higher than at September 1, 1941, while there was an increase of 16 per cent in this comparison in the index of payrolls. The 243 establishments co-operating at September 1, 1941, had employed 20,660 workers.

Hamilton.—Industrial activity showed expansion in Hamilton at September 1, according to statistics compiled from 347 firms with a staff of 62,266 men and women, as compared wth 61,426 at August 1. The weekly payrolls disbursed on or about September 1 amounted to $1,971,424; this was an increase of 1·3 per cent over the salaries and wages paid at August 1 by the same employers. The gain in employment was 1·4 per cent. The per capita average earnings slightly declined from $31.70 at August 1 to $31.66 at the beginning of September; in some cases, vacations during the pay period coming under observation had lowered the reported payrolls. The figure at the same date of last year had been $28.45.

Substantial gains were recorded in manufacturing at September 1; most of this took place in iron and steel plants. Transportation and trade also showed moderate improvement. On the other hand, there was a falling-off in construction.

At September 1, 1941, 340 reports had been tabulated, showing a personnel of 54,952 men and women. In the 12 months, the index of employment has risen by 13·2 per cent, while that of payrolls has risen by 25·9 per cent. The latest index of employment (viz., 190·7), is the highest in the record.

Windsor.—There was a further but smaller increase in employment in Windsor at September 1, when the 206 co-operating employers reported a staff of 40,357, or 112 more than at August 1. The amount paid these persons as weekly earnings was $1,599,945, compared with $1,525,187[1] in the last report. The September 1 per capita average was $39.64, as compared with that of $37.90[1] paid to the typical individual in recorded employment at August 1. The increase in employment at the beginning of September was mainly in iron and steel plants; food factories released workers, while the changes in other industries were slight.

The 200 establishments furnishing data at September 1, 1941, had reported 33,208 employees. The later index, at 297·0, was the maximum in the record, exceeding by 21·5 per cent that at the beginning of September, 1941. The index number of payrolls has advanced by 34·8 per cent over the twelve months.

Winnipeg.—Industrial activity continued to gain in Winnipeg. The improvement took place largely in the manufacture of iron and steel, food and pulp and paper products, and in construction. On the other hand, wholesale trade was quieter. A working force of 56,039 persons was employed by the 561 firms whose returns were tabulated, and who had reported a staff of 55,648 at August 1. There was thus an increase of 0·7 per cent in employment; this was accompanied by that of 2·2 per cent in the weekly wage disbursements, which amounted to $1,537,460 at September 1. The per capita average rose from $27.04[1] at August 1, to $27.43 at the beginning of September.

The latest index number of employment was 134·4, the highest to date; it was 3·7 per cent above the September 1, 1941, figure of 129·6. The increase in the index of payrolls over the twelve months has amounted to 13·8 per cent. The 555 employers whose statistics had been tabulated at September 1, 1941, had reported 54,027 men and women on their payrolls. The indicated per capita weekly average earnings had then been $24.98.

Vancouver.—The upward movement in Vancouver which has been in evidence without interruption since January 1, 1941, continued at the beginning of September. The

[1] Revised.

greatest expansion was in manufacturing, mainly in iron and steel, although there were smaller gains in food and electrical apparatus factories. Construction and services also showed improvement, that in the former being considerable. Transportation and trade, however, were quieter.

The employees of the 608 co-operating firms numbered 81,786, compared with 78,543 at August 1. The latest index, at 231·0, was 44·9 per cent higher than that of 159·4 at September 1, 1941. The persons in recorded employment at the date under review were paid the sum of $2,564,679 in weekly salaries and wages. The index of payrolls has risen by 69·3 per cent since September 1, 1941.

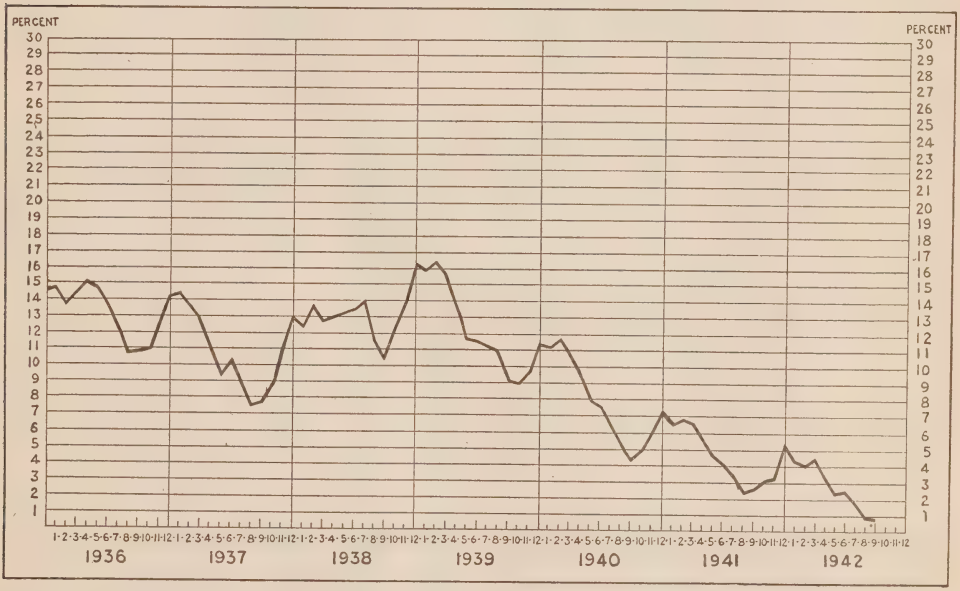
The per capita average, at $31.36, at the beginning of September, 1942, compared favourably with those of $30.58 at August 1, 1942, and $26.55 at September 1, 1941. The 584 establishments then furnishing information had employed 56,175 persons.

Unemployment in Trade Unions at the close of September, 1942

Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes, are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Returns were tabulated in September from 2,272 labour organizations having a combined membership of 380,304 persons, of whom 2,928 or a percentage of 0·8 were reported as unemployed, in comparison with 0·9 per cent in August and 2·7 per cent in September, 1941. The small percentage of unemployment was due largely to temporary lay-offs. The slight improvement over August was traced principally to minor employment advances for union members in the manufacturing and transportation industries. As will be observed in table II, the unemployment percentages in these industries were 0·4 and 0·8, respectively, compared with percentages of 0·5 and 1·2, in August. The percentage of members, who were without work at the close of September was the lowest for any month in these records, which were published on a monthly basis for the first time in January, 1919. Previous to that date the trade union report appeared quarterly.

In table I, the unemployment percentages are shown by provinces. It will be seen that these ranged from 0·3 per cent in British Columbia to 1·3 per cent in Quebec. Provinces, in which less than one per cent were reported as without work were Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. In comparison with August, New Brunswick and Manitoba reports reflected substantially higher employment levels; as will be seen in table I the percentages of unemployment in these provinces declined to 1·1 and 0·5 respectively. Fractional improvement was registered by Quebec and Ontario members. In Alberta there was no change, while in Nova Scotia, Saskatchewan and British Columbia, although the unemployment percentages were under one per cent, there were, however, slight contractions in work. In comparison with conditions in September, a year ago, noteworthy employment expansion was observed among Quebec, Ontario, Manitoba and British Columbia members, while increases in work although to lesser degrees were reflected in returns received from Nova Scotia, New Brunswick, Saskatchewan and Alberta unions.



A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. The percentages of unemployment ranged from 0·2 in Vancouver to 1·2 in Saint John and Edmonton. Cities, in which the percentages of union members were reported as without work and under one per cent, were Vancouver, Toronto, Halifax, Winnipeg and Regina. The percentage of unemployed members in Winnipeg, which stood at 0·6 in September, was considerably lower than that shown in August; thus indicating a substantial betterment. Fractional employment increases were observed in Toronto and Edmonton, while the situation in Halifax, Montreal, Regina and Vancouver remained unchanged. In Saint John the percentage of unemployed members was 1·2; this was moderately higher, thus indicating a fair employment contraction. In comparison with the situation in September, a year ago, Halifax members, whose current reports indicated an unemployment percentage of 0·5, showed a marked employment advance. Toronto and Winnipeg members reported unemployment percentages of 0·4 and 0·6 respectively; these were likewise decidedly lower, thus reflecting noteworthy improvement. Employment expansion of lesser degree was apparent in Montreal, Vancouver, Saint John and Edmonton, while a fractional advance only was observed in Regina.

The chart which accompanies this article shows the trend of unemployment from

January, 1936, to date. The curve in September, 1942, rested at a fractionally lower level than in the preceding month, thus reflecting a very slight employment advance. The point of the curve was distinctly lower than in September, a year ago, which was indicative of a pronounced employment expansion.

For the manufacturing industries 763 reports were tabulated. The total membership was 203,141 persons, of whom, 739, or a percentage of 0·4 were without work, in comparison with percentages of 0·5 in August and 1·6 in September, 1941. In comparison with the previous month 3·2 per cent of the unclassified manufacturing workers were without work; this was a much higher employment level. The percentage of unemployment among papermakers was 0·3; this was a slightly higher employment level. Among bakers and confectioners, fur workers, electric current employees and textile and carpet workers there were minor gains, likewise; little or no unemployment was in evidence among these workers. Trades in which the unemployment percentages remained unchanged were woodworkers, garment, and clay, glass and stone workers, the percentages of those without work as reported by these unions were 0·4, 0·1 and 0·2, respectively. As in the preceding month, no unemployment was apparent among soft drink, cigar and tobacco workers, butchers, meat and fish packers, rubber, aluminum and gas workers. In contrast, the percentages of unemployment among leather workers was 3·5, among printing tradesmen 1·5 and for members in the iron and steel trades, 0·2; all of these showed slight employment contractions. Smaller memberships, in which there was reflected little unemployment, although slight recessions in activity were manifested, were metal polishers, jewellery and hat, cap and glove workers. In comparison with the situation at the close of September a year ago, rather marked employment expansion, as may be observed in table II, was in evidence for members in the iron and steel trades. Much higher employment levels were manifested, likewise, by leather and unclassified manufacturing workers. Unions of papermakers and woodworkers, whose unemployment percentages were 0·3 and 0·4, respectively, reflected moderate expansion in work. Trades in which the membership was reported as fully employed at both dates, were cigar and tobacco, electric current employees, butchers, meat and fish packers, rubber, aluminum and gas workers. On the other hand, hat, cap and glove and jewellery workers showed slight employment recessions.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

For coal miners returns were received from 55 unions having a total membership of 19,729 persons, of whom, 80, or a percentage of 0·4 were without work, in comparison with no unemployment in August and 2·0 per cent in September, a year ago. As in the preceding month, union members in New Brunswick, Alberta, and British Columbia were reported as fully engaged. In Nova

Scotia, the unemployment percentage was 0·7; this was a slight employment contraction. In comparison with the situation in September, 1941, the percentage of unemployment among union members in British Columbia showed an impressive decline of from 13·9 on that date to full employment, in September, 1942. Adequate work was observed in Alberta in comparison with a percentage of 0·8, while no unemployment was apparent in New Brunswick, at either date. The percentage of unemployed members in Nova Scotia, which was 0·7, remained unchanged.

Returns were tabulated from 9 unions of members in the non-metallic minerals group. The total membership was 4,245, of whom, 113, or a percentage of 2·7 were without work, in comparison with percentages of 4·5 in August and 16·0 in September, a year ago.

Unions in the building and construction trades returned 218 reports. These had an aggregate membership of 33,224 persons, of whom, 1,049, or a percentage of 3·2 were unemployed, in comparison with percentages of 3·3 in the preceding month and 7·1 in September, 1941. The unemployment percentage as reported by bricklayers, masons and plasterers was 5·7, which reflected moderately better conditions; the situation for granite and stonecutters, showed a slight improvement. Among steam shovel men and bridge and structural iron workers, no unemployment was reported in comparison with percentages of 2·0 and 1·8 respectively. For electrical workers, painters, decorators and paperhangers and plumbers and steamfitters the very high employment levels attained in August, remained unchanged; the percentages respectively of unemployed members in those trades were 0·5, 0·6 and 0·7. No unemployment was apparent among lathers, at either date. On the other hand, the unemployment percentage for unions of hod carriers and miscellaneous building workers was fractionally higher at 6·3. The situation for carpenters and joiners reflected a minor contraction, the percentage of members without work, standing at 3·4, compared with 2·9. In comparison with reports tabulated in September, 1941, bricklayers, masons and plasterers, carpenters and joiners and painters, decorators and paperhangers were much better employed. Although their membership is small and consequently, comparatively few members were involved, pronounced improvement was apparent among granite and stonecutters. No unemployment was indicated by steam shovel men, bridge and structural iron workers and lathers, while the percentages of unemployment among these members in September, a year ago, were 6·5, 3·4 and 5·0, respectively.

In the transportation industries returns were tabulated from 900 unions, having a total membership of 80,427 persons. Of these, 679, or a percentage of 0·8 were unemployed in comparison with 1·2 per cent in August and 2·3 per cent in September, 1941. A noteworthy employment advance over the preceding month was in evidence among navigation workers; the unemployment percentage for these members stood at 3·1, as against 8·8. Steam railway employees, whose returns constituted over 79 per cent of the entire group membership reflected, as may be seen in table II, a still higher employment level. In contrast,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

while they indicated only fractional percentages of unemployment, street and electric railway employees and teamsters and chauffeurs, etc. manifested very slight contractions in work. In comparison with reports received in September, 1941, employment for navigation workers was in much greater volume. The unemployment percentage for steam railway employees, which stood at 0·9, likewise indicated a substantially higher employment level. Teamsters and chauffeurs, etc. were fractionally better employed, while in contrast there was a small fractional decline in activity among street and electric railway employees.

From unions in the wholesale and retail trade, there were 10 reports tabulated, having an aggregate membership of 2,505 persons. These unions as in August, did not report any unemployment; in September, 1941, the unemployment percentage was 0·1.

Civic employees unions reported that 0·1 per cent of the membership was without work, in comparison with no unemployment in August and 0·5 in September, a year ago. Reports were tabulated from 108 unions, having a total membership of 9,838 persons, of whom, 6, or a percentage of 0·1, were unemployed.

In the miscellaneous group of occupations, returns were received from 147 unions. These organizations had a combined membership of 11,817 persons, of whom, 59, or a percentage of 0·5 were unemployed, compared with percentages of 0·8 in August and 1·5 in September, 1941. The unemployment percentages for stationary engineers and firemen and unclassified workers were 0·4 and 0·1, respectively; employment levels in these trades were slightly higher. The percentage of members who were out of work among theatre stage employees remained unchanged at 2·2. On the other hand, hotel and restaurant employees with 0·4 per cent of inactivity and barbers with 0·5, reflected slight declines in work. In comparison with conditions in September, a year ago employment for theatre and stage, hotel and restaurant employees and unclassified workers was substantially increased; a moderate improvement was observed among stationary engineers and firemen, while the percentage of members reported as out of work among barbers remained unchanged at 0·5.

Returns were tabulated from 5 unions of fishermen, having a total membership of 2,728 persons, of whom 25, or a percentage of 0·9, were unemployed. The percentages of members reported as without work in August was 0·4, and in September, 1941, it was 10·4.

Reports were received from 2 unions of lumber workers and loggers. The total membership was 3,605 persons, all of whom, as in August, were reported as working. In September, a year ago, the percentage of members reported as unemployed was 0·6.

Table I shows by provinces the average percentage of union members, who were unemployed each year from 1931 to 1941 inclusive, and also the percentage of unemployment for September of each year from 1931 to 1940, inclusive, and for each month from September, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in Table I.

Building Permits issued in Canada during September, 1942

The September report of building permits compiled by the Dominion Bureau of Statistics includes returns from 166 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 156 reported detailed operations. The remaining 10 advised that no permits had been issued during the month of September while 38 municipalities had failed to report at the close of October 12.

The total value of permits reported as issued in the month of September is $10,540,-657. Revised values for the month of August include returns from 201 municipalities and aggregate $8,340,878. Reports were received from 55 of the 58 original municipalities and show a value of $7,448,396 for September. The corresponding revised value for August includes 58 returns and is $6,178,-192 while the September, 1941, value was $8,101,171.

The total value of permits issued by all municipalities during the nine elapsed months of the current year is $80,863,920. The value of the 58 municipalities for the same period is $58,298,223, while their corresponding value in 1941 was $75,793,328.

During the month of September new construction of all types amounted to 76·9 per cent of the total value, while the percentage of new residential construction was 41·5.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, September, 1942, summarizes the July-August employment situation in Great Britain as follows:—

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at August 17, 1942 (exclusive of 23,450 men who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 71,308; those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,766; and those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 2,548. As compared with July 13 the numbers wholly unemployed showed a decrease of 260 among men but an increase of 5,452 among boys, the latter being mainly due to the registration of school leavers. Those temporarily suspended from work showed an increase of 38, and unemployed casual workers an increase of 368.

The corresponding figures for women and girls at August 17, 1942, were 36,226 wholly unemployed (exclusive of those, numbering 1,122, who had been classified by interviewing panels as unsuitable for normal full time employment), 1,856 temporarily stopped, and 121 unemployed casual workers. Of the 36,226 wholly unemployed, 1,146 had been classified as unable for good cause to transfer to

another area. As compared with July 13, the numbers wholly unemployed showed a decrease of 2,974 among women but an increase of 3,880 among girls, the latter being mainly due to the registration of school leavers. Those temporarily stopped showed an increase of 320, and unemployed casual workers showed a decrease of 4.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for August 17, was 71,108, as compared with 70,342 at July 13, and 159,525 at August 11, 1941.

United States

A gain of 501,000 between mid-August and mid-September brought the total number of employees in civil non-agricultural establishments to 38,303,000, according to the official report issued by the United States Secretary of Labor. This is a new, all-time peak and exceeds the September 1941 figure by 2,247,000.

About half of the increase over the month interval was in manufacturing industries (255,000). Federal, State, and local government employment increased by 223,000, of which about $\frac{2}{3}$ occurred in State and local government, chiefly as a result of the reopening of schools after the summer vacation. Despite government restrictions affecting the sale of civilian goods, trade employment showed a gain of 66,000, a seasonal increase in retail trade having more than offset a contraseasonal decrease in wholesale trade. The finance, service, and miscellaneous division reported 20,000 more employees on its payrolls and the transportation and public utilities group, 6,000 more. In contract and Federal force account construction employment was reduced by 62,000, due primarily to recessions in private building. Mining employment fell off 7,000, due largely to reductions in metal mining.

About three-fourths of the two and a quarter million employment increase in non-agricultural establishments over the year interval was accounted for by manufacturing, which reported a gain of 1,664,000. Federal, State, and local government offices reported 980,000 more workers, due chiefly to expansion in the War and Navy Departments, while the transportation and public utilities group and the finance-service-miscellaneous group reported smaller gains. The largest decline over the year was in trade (446,000), reflecting the effects of government restrictions. Mining and construction employment decreased by 73,000 and 65,000, respectively.

Factory wage earner employment again showed an increase, 1·6 per cent, over the month, continuing the virtually unbroken succession of monthly gains that began in June 1940, when the Defence Program was inaugurated. In that month the index stood at 103·1 per cent of the 1923-25 average as compared with 148·2 for the current month. The corresponding payroll index advanced 2·7 per cent over the month, to 220·5, a gain of about 120 per cent over the June 1940 index (99·5). The fact that payrolls had advanced about three times as much as employment over this period was due primarily to increased working hours, overtime premiums, wage-rate increases, and expansion in war industries, where relatively high wage scales prevail. The gains between September 1941 and September 1942 were 9·6 per cent in employment and 35·6 per cent ($109,804,000) in weekly wages.

The September gains of 1·7 per cent in employment and 3·1 per cent in payrolls in the durable-goods group of manufacturing industries were due chiefly to continued expansion in such strategic industries as shipbuilding, aircraft, automobiles, electrical machinery, engines, radios, foundries, and machine shops, and machine tools. The gain of 4·4 per cent or 17,700 workers in the automobile industry was the fifth successive monthly increase, indicating rapidly rising war production in converted automobile plants. A larger than seasonal gain of 30·5 per cent (71,800 workers) in canning employment was chiefly responsible for the increase of 1·6 per cent in the non-durable goods group.

Many industries continued to report employment declines, due primarily to material shortages and freeze orders. Among them were cast-iron pipe; cutlery; plumbers' supplies; tin cans and other tinware; business machines; lighting equipment; smelting and refining of copper, lead and zinc; hosiery; fur-felt hats; and silk and rayon goods.

The contraseasonal decline of 0·9 per cent in employment in wholesale trade was due to recessions in each of the major wholesale groups except groceries and food specialties, which reported a gain of 0·7 per cent, and farm products, where employment increased seasonally by 9·2 per cent. Employment in the wholesale automotive group fell off 3·7 per cent, and in petroleum and petroleum products, 2·2 per cent, due to Government restrictions affecting sales in these groups. The corresponding employment losses over the year interval in these two lines of wholesale trade were 20 and 8 per cent, respectively. In the dry goods and apparel group, the employment loss since August was 1·4 per cent and since September 1941, 12 per cent.

In retail trade employment increased seasonally over the month by 2·6 per cent. Fall buying was reflected in employment gains of 7·8 per cent in department stores, 16·9 per

cent in women's clothing stores, 5·1 per cent in men's and boys' clothing and furnishing stores, 6·2 per cent in family clothing stores, and 17·9 per cent in shoe stores. Government restrictions on the manufacture and sale of civilian goods continued to affect employment in various retail lines and were reflected in the following declines: retail automobile establishments 2·9 per cent; tire and battery shops 1·5 per cent; electrical appliances and radios 4·4 per cent; and establishments dealing in building materials such as paint and glass (2·9 per cent), heating and plumbing supplies (6·0 per cent), and electrical shops (5·1 per cent).

In metal mining employment declined by 3 per cent, reflecting an acute labour shortage. The decline since September 1941 amounted to 1·3 per cent, but payrolls showed an increase of 20·3 per cent due to increased working hours, overtime premiums and increases in basic wage rates. Despite employment declines over the month interval in coal mining, quarrying and non-metallic mining, and crude petroleum production, payrolls showed substantial gains, indicating wage increases and increased production. All of these industries reported substantial employment declines since September 1941, but their payrolls were higher.

The employment decline over the month of 2·1 per cent reported by electric light and power companies continued the recessions shown each month since September 1941. Telephone and telegraph companies had about the same number at work in September as in August, while street railway and bus companies reported a slight increase in the number at work, continuing the uninterrupted monthly gains that began in February 1942. The gains over the year interval in the latter industry were 7·2 per cent in employment and 20·2 per cent in payrolls, reflecting the increased demand for public transportation.

Employment declines were general in the service industries, due in part to the difficulty of replacing workers drawn into the armed forces or into war industries. The largest decline (3·0 per cent) was in the brokerage industry. Insurance firms reported 1·4 per cent fewer employees, hotels, 0·5 per cent, and laundries and dyeing and cleaning establishments, 0·4 per cent.

Wage-rate increases averaging 7·5 per cent and affecting 400,000 factory wage earners were reported by 999 manufacturing establishments out of a reporting sample of about 30,000 establishments employing 7,000,000 workers. Most of the wage earners receiving wage-rate increases were in the following manufacturing industries: cotton goods, electrical machinery, steel, and engines. In non-manufacturing industries the largest number of workers affected by wage-rate increases were reported by the public utilities (8,000) and crude petroleum production (4,300).

The increase of 1,000 workers during the month ending September 15 on all construction and shipbuilding projects financed wholly or partially from Federal funds brought the level of such employment to 2,230,000. The net increase of 9,000 workers on projects financed from regular Federal funds was the result of a continued expansion on naval and merchant vessel construction and on water and sewerage projects, offset to some extent by decreased employment on airport and non-residential-building construction projects which were completed during the month. The decline of 8,800 wage earners on RFC-financed construction was due to the completion of certain projects for the construction and outfitting of additions to plants and the provision of equipment and facilities for existing plants.

Nine out of every 10 construction and shipbuilding workers were engaged on war projects in September. Only 1 out of every 8 was employed directly by the Federal Government, however, the others being employed by contractors and sub-contractors.

Aluminium Dust Treatment for Silicosis

"Inhalation of finely particulated metallic aluminium dust will prevent development of human silicosis," according to a report based on a study made by Dr. W. Cronbie and Dr. J. L. Blaisdell at the Porcupine clinic for silicosis research, Timmins, Ont.

Mr. Blaisdell said 34 miners were treated with the powder, freshly ground from small aluminium pellets in a specially constructed mill. Five minutes' inhalation, gradually increased to 30 minutes daily, was continued over a period, in some cases of almost a year.

"Out of the 34 cases studied, 19, or 56 per cent, have shown clinical improvement, apparent chiefly in the lessening or disappearance of shortness of breath, cough, pain in the chest and fatigue," he said. "A reduction in the incidence of colds and a gain of weight have also been observed in many of the cases."

He added, however, that "aluminium dust cannot be regarded in any sense as a cure for silicosis, in so far as restoring to normal lung tissue which has already undergone fibrotic change is concerned."

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at September 30, 1942

IN the accompanying tables, which have been prepared by the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at September 30, 1942. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375, and the new regulations were reviewed in the issue for March, 1938, pages 286-288.)

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and over who is not in receipt of an income of as much as $365 a year and who has resided in Canada for 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (Labour Gazette, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married, or unmarried, is $240 per annum. If however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to $120. If a pensioner is unmarried, the maximum pension is reduced by the amount of his income from earnings or other sources in excess of $200 a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of $165, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $400. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds $200.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette* of August 28, 1937.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

OLD AGE PENSIONS

FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT SEPTEMBER 30, 1942

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar. 1, 1934	Ontario Act effective Nov. 1, 1929

COMPANY REPORTS TO EMPLOYEES

A QUITE recent trend in industrial relations has been the issuing by companies of reports to their employees, describing their business and financial operations. A study recently issued by the National Industrial Conference Board, Inc., 247 Park Avenue, New York, examines this trend. It declares that although the practice of issuing annual company reports to employees is by no means widespread, an appreciable number of corporations have in the last few years experimented with the policy of outlining the progress of their affairs to their workers.

The study, entitled *Company Annual Reports to Employees,* represents an analysis of 146 company reports. It describes the type of material generally included in such reports, methods of presenting the information in easily understandable form, and similar details. It also discusses the merits of attempting to make known to employees a company's financial standing and policies.

Reasons for Reporting

The reason for reporting to employees most frequently expressed by executives, according to the study, is "the thought that employees, even as stockholders, are partners in the business and have a right to know the problems of management and how they are being met. . . . The task of management is to try to plan the operation of the business in the best way to maintain continuous returns for the investors, continuous employment for the workers. The obligation of management is to report its stewardship to the latter as well as to the former group.

"A clarification of the roles of employees, management, and stockholders, it is hoped, will impress an employee with a realization of the interdependence of each group—a sense of mutual responsibility. His relationship to customers or consumers, too, is frequently emphasized in the annual report."

It is furthermore suggested in the study that an informed employee can be most helpful in shaping the public's attitude towards his company; and that employees who can meet rumours with fact perform a valuable service in public relations.

Making Reports Readable

"When the idea of reporting to employees was first translated into action," the study continues, "there was general recognition that the report would have to be more 'readable' than the average stockholders' report, both to attract and hold the employees' attention and to transmit the story management wished to tell."

Experiments were made in eliminating difficult technical language and substituting the language of normal every-day life. It was soon discovered that many stockholders welcomed the appearance of an easily understandable financial statement and were writing in for the report prepared primarily for employees. Some companies thereupon began issuing the same simplified report to both employee and stockholder. "The chief advantage of publishing a single report for both groups," according to the study, "is that it allays all suspicion that management may be giving employees different information from that provided stockholders."

According to the study, the translation into every-day terms of such standardized material as the ordinary balance sheet and income statement presents problems which usually are beyond the province of the treasurer and fall rather into the field of industrial or public relations. In some corporations the advice and co-operation of employees is sought in preparing the report.

Non-technical Financial Statements

Examples are given of non-technical financial statements. These achieve simplification by omitting many detailed items and consolidating them under general heads, explaining in simple language the items retained, and rearranging the items to show clearly the data in which readers are most interested. Pictorial charts interpret statistics in a vivid manner, and several ingenious examples of these are printed in the study.

"From the employee's standpoint," the study declares, "the income statement provides two outstanding pieces of information—how much the company made during the year under review and what was the worker's share.

"A form frequently utilized to give emphasis to these points is a statement prepared in three parts. In the first section the various items of income are segregated and totalled. In the second section are items of expense whose total is subtracted from the total income. The third section shows the distribution of the resultant figures."

The study lists a variety of subjects which appear in the narrative of the reports of different companies. Sales, employment, wages, and earnings may be compared with the figures of previous years. Taxes and government relations are frequently discussed. The company's part in the war effort is a popular topic, and with it may be included an honour roll of employees in the armed forces, purchases of bonds and stamps, increased production schedules, and measures against sabotage. A description of research achievements of the year and problems on which the research laboratories of the company are working adds scope to the report; and many companies close with a glimpse into the future—the problems that have to be faced and the outlook for continued successful operation of the business.

Evaluation of Reports

The evaluation of reports to employees is made difficult by the brief history of the movement, according to the study. The majority of executives expressing their opinion stated that their conviction of the worth of continuing publication of the annual report was based on a general impression rather than any tangible tests. The study describes a number of questionnaires sent out to employees to determine whether reports were interesting and easy to read. However it was declared to be difficult to measure the value of reports in terms of improved morale or increased production. Warning is given in the report as to the necessity for absolute frankness in reports "all the way through." This is stated to be necessary if the objective of an "atmosphere of confidence, basic in all good employer-employee relations," is to be attained.

WORKMEN'S COMPENSATION IN QUEBEC, 1941

AN increase in the number of industrial accidents in Quebec during 1941 over the previous year's total is announced in the fourteenth annual report of the Quebec Workmen's Compensation Commission. The number of accidents reported to the Commission during 1941 was 82,568. This compares with a total of 65,704 in 1940 and an average of 42,381 yearly from 1931-1939.

The Commission's report states: "It is obvious, that if the present increase in the number of industrial accidents reported is continued, the rates in certain classes will have to be increased.

"We, therefore, recommend to all employers to take additional steps to prevent accidents in order to insure the stability of the present rating structure and at the same time, conserve man-power to the limit, bearing in mind the all-out effort required during the present war."

According to the report, the amount paid out in compensation during 1941 was $3,729,416.63 (provisional figure). This compares with a total of $4,895,821.81 in 1940. The largest item on the 1941 expenditure list was for temporary incapacity, $1,540,933.76. The other items were $880,956.79 for medical aid, $651,026.48 for permanent incapacity, and $656,499.40 for fatalities. A reserve was set up for outstanding adjustments, amounting to $2,819,137.03.

The report states that the expenses of administration of the commission rose by approximately 20 per cent as compared with 1940. This was attributed to payment of an increased cost of living bonus, and to payment of increased salaries to many members of the staff to correspond with additional responsibilities and extra work imposed on account of the greatly increased number of accidents reported. In addition, costs of office supplies had gone up, and rental was being paid on offices previously supplied free of charge. Salaries of commissioners and staff amounted to $341,157.81, total administration expenses being $404,268.14.

Revenues for the year totalled $6,880.937.85, made up of assessments, transfers from the disaster fund, interest, penalties, and sundry items.

The report shows an accumulated surplus from September 1, 1931, to December 31, 1941, of $1,020,608.38. This surplus is established after allowing for a rate reduction totalling approximately $200,000, which will apply to the next assessments issued against employers of Schedule 1.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the Labour Gazette from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under the Industrial Standards Act are summarized in separate articles following this.

Manufacturing: Vegetable Foods, etc.

Saint John, N.B.—Atlantic Sugar Refineries, Ltd., and The Sugar Refinery Workers' Union, No. 20.

Agreement reached by the parties, with the assistance of an Industrial Disputes Inquiry Commissioner, as noted on page 1251 of this issue. This agreement is in effect from October 15, 1942.

The company recognizes the union and will meet a union committee to discuss any questions or grievances. Time and one-half for work on Sundays and five specified holidays except when part of a regular shift. Seniority will be considered in making promotions. If time and one-half for overtime is allowed by the War Labour Board, and if staggered shifts are arranged and should so operate as to reduce the working hours of employees during slack periods below what they would have been without the staggered shifts, the staggered shifts will be eliminated during such slack periods.

Saskatoon, Sask.—Robin Hood Flour Mills Ltd., and The Flour, Cereal and Feed Mill Workers' Union, No. 72.

Agreement in effect from September 25, 1942 to September 24, 1943, and thereafter subject to 60 days' notice. The company recognizes the union as the bargaining agent for its members.

Hours: 8 and 9 per day in the flour mill and boiler room, 8 hours in the flour packing department, 8 and 10 hours in the warehouse department and in the elevator, 10 hours for maintenance crew, 12 hours for watchmen; where 8 and 10 hours are shown, the normal working day is 8 hours, but if necessary to work longer, regular rate to be paid for all time up to 10 hours. Overtime is payable at time and one-half, as also all work on Sundays and eight specified holidays. Vacation: when permission is obtained from the Government, one week's vacation annually after one year's service, two weeks' vacation after three years' service.

Hourly wage rate: boiler room—firemen 45 cents, firemen (maintenance) 50 cents, watchmen 37 cents; flour mill—trick millers 63 cents, machine tenders 50 cents, smutters 47 cents, oilers 41 to 45 cents, sweepers 35 to 41 cents; maintenance—mill-wrights 60 to 77 cents, millwright helpers 45 to 55 cents; elevator—unloader 48 to 50 cents, binner distributor 45 to 50 cents, diverters 45 to 50 cents, others 45 cents; packers and truckers—head packer 54 cents, flour and feed packers 50 cents, truckers 45 cents; warehouse—checker 50 cents, sackman 35 to 45 cents, warehousemen 45 to 50 cents. Provision is made for seniority rights and for the settlement of grievances.

Manufacturing: Tobacco and Liquors

London, Ontario.—A Certain Brewery and The National Beverage Workers' Union, Local No. 1.

Agreement in effect from April 1, 1942, to March 31, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the Labour Gazette, December 1941, page 1558, with these exceptions: Hours for brewery department continue at 45 per week, but for drivers and helpers on city deliveries the hours are 48 per week (drivers and helpers on transport work continue at 52 hours), for truck maintenance employees, 47½ hours per week. The cost of living bonus is as determined by the 1941 Order in Council 8253 of the Dominion Government.

Transcona, Manitoba.—A Certain Malt Manufacturing Company and The International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 361.

Agreement in effect from April 1, 1942, to March 31, 1943, and thereafter from year to year, subject to notice, and is similar to the one previously in effect and summarized in the Labour Gazette, December, 1941, page 1558.

Regina, Sask.—Certain Breweries and The International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 318.

The agreement which came into effect November 1, 1940, and was summarized in the Labour Gazette, December, 1941, page 1558, was renewed from July 1, 1941, to July 1, 1943, with an increase in wage rates of 10 per cent.

Edmonton, Alberta.—Certain Breweries and The International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 314.

The agreement which came into effect April 1, 1939, and was summarized in the Labour Gazette, August, 1939, page 848, remains in effect for the year April 1, 1942 to March 31, 1943, with an increase in the cost of living bonus from $1.39 to $3.21½ per week, retroactive to February 15, 1942.

Calgary, Alberta.—Certain Breweries and The International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America, Local 124.

The agreement which came into effect April 1, 1941, and was summarized in the Labour Gazette, December, 1941, page 1558, was

renewed from April 1, 1942, to March 31, 1943, and thereafter subject to 30 days' notice, with a cost of living bonus under the Wartime Wages and Cost of Living Bonus Order, such bonus to be based on the rise in the index number above the index number for April, 1941, the date of the last general increase in wages.

VANCOUVER, B.C.—CERTAIN BREWERIES AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS, LOCAL 300.

Agreement in effect from January 1, 1942, to December 31, 1944, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1941, page 1559, with certain minor changes not affecting the summary of the previous agreement.

VICTORIA, B.C.—A CERTAIN BREWERY AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL 280.

Agreement to be in effect from January 1, 1942, to December 31, 1944, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June, 1941, page 696, September, 1940, page 967, and November, 1938, page 1292, with this exception: all employees, including permit men, with three years' service or longer to be granted 10 days' vacation per year, with pay.

Manufacturing: Fur, Leather and Leather Products

MONTREAL, P.Q.—A CERTAIN LEATHER GOODS MANUFACTURER AND THE INTERNATIONAL LADIES' HANDBAG, POCKETBOOK, LUGGAGE AND NOVELTY WORKERS' UNION, LOCAL NO. 9.

Agreement, made following the strike which was noted in the LABOUR GAZETTE, September, page 1010, is to be in effect from August 25, 1942, to August 1, 1943. Only union members to be employed, if available. Hours: 44 per week; overtime at time and one-quarter. Wages: an increase of $2 per week from August 1, 1942, subject to the approval of the Regional War Labour Board. Both parties agree to co-operate in preparing and establishing a wage scale for the industry. Apprentices to receive a minimum of $8 per week. There are provisions also for the equal division of work and for the settlement of disputes.

Manufacturing: Textiles and Clothing

GUELPH, ONTARIO.—A CERTAIN FELT HAT MANUFACTURING COMPANY AND THE UNITED HATTERS, CAP AND MILLINERY WORKERS INTERNATIONAL UNION, LOCAL 43.

Agreement in effect from December 1, 1941, to November 30, 1942. Employees who are or become union members are to remain union members. Hours: 50 per week to be worked in either five or five and one-half days of not more than 10 per day, 5 on Saturdays; time and one-half for overtime and work on seven statutory holidays. Provision is made for the settlement of disputes.

VANCOUVER, B.C.—CLOAK AND SUIT MANUFACTURERS ASSOCIATION AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION, LOCAL 276.

Agreement in effect from June 1, 1942, to June 1, 1944, or 1945 if required notice is not given prior to the expiration date. Only union members to be employed. Hours: 8 per day, Monday to Friday, a 40-hour week. Overtime: straight time for first four hours, that is up to a 44-hour week; thereafter, time and one-half. Piece work rates were to be set, with certain minimum prices stipulated, and scales and classifications were to be prepared jointly for inclusion in the next agreement. Methods of settlement of any disputes arising were also provided for.

Manufacturing: Metal Products

WINDSOR, ONTARIO.—MCCORD RADIATOR AND MANUFACTURING COMPANY AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

This agreement was entered into following the recommendation of a board under the Industrial Disputes Investigation Act (*see* LABOUR GAZETTE, August, page 890). Agreement to be in effect from September 29, 1942, to August 31, 1943, and thereafter from year to year, subject to notice.

The company recognizes the union as the bargaining agent for its members, but employees are free to join or not join any union or association. While existing legislation remains in force concerning wages, bonuses, etc., the management and the union agree that before either make application regarding same to the Regional War Labour Board, the matter will be discussed between the parties. Provision is made for seniority rights and for the settlement of disputes.

Manufacturing: Non-Metallic Minerals, Chemicals, etc.

LENNOXVILLE, QUEBEC.—THE PHILIP CAREY CO. LTD., AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 460).

Agreement reached following a request for a board under the Industrial Disputes Investigation Act, which was not established following a recommendation of an Industrial Disputes Inquiry Commissioner appointed to investigate the dispute (*see* page 1250 of this issue).

Agreement to be in effect from August 27, 1942, to August, 26, 1943, and thereafter from year to year, subject to notice. Any employees who are or become union members must maintain their membership, and new employees are to join the union.

Hourly wage rates: covering department—general utility man 40 cents, corrugator operator 40 cents, other male workers 35 and 38 cents, female workers 25 to 30 cents; paper mill—machine tenders 43 cents, back tenders 40 cents, third hand, fourth hand, fifth hand, beater runner helper 38 cents, screens and general labourer 35 cents; general plant—shipper 40 cents, helpers 35 cents, storekeepers 38 cents, laboratory testers 35 and 38 cents, elevator operator 35 cents, plant office clerk 35 cents, labourers 35 cents, plant office clerk (female) 25 to 30 cents; roofing department—

melting tank man 38 cents, saturating man 41 cents, coating man 38 cents, senior winders and back tenders 38 cents, other male employees 35 cents, female helpers 25 cents; expansion joint and planking—35 to 41 cents; mechanical department—senior millwright 43 cents, senior mechanic 40 cents, carpenters 41 cents, mechanics and millwrights 38 cents, mechanics' helpers, oilers and maintenance man 35 cents, firemen $4.55 per day, $3.93 per night.

Seniority to be considered in making promotions and when laying off men. Provision is made for a grievance committee and for the adjustment of disputes.

COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the Labour Gazette, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obilgatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the Labour Gazette from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings upder the Act include the extension of two new agreements, and the amendment of ten agreements, all of which are summarized below. Requests for the amendment of certain agreements were published in the *Quebec Official Gazette* as follows: for the paper box (uncorrugated paper) industry throughout the province, in the issue of October 3; for the retail fur trade at Montreal, hardware and paint stores at Quebec, grocers and butchers at Sherbrooke and barbers and hairdressers at Joliette, in the issue of October 10; for the paper box (corrugated paper) industry throughout the Province, in the issue of October 17; for barbers and hairdressers at Joliette, in the issue of October 24.

In addition, Orders in Council were published in the *Quebec Official Gazette* during October, approving or amending the constitution and by-laws of certain parity committees, and others approving the levy of assessments or amending previous Orders in Council in this connection, by certain other parity committees.

Manufacturing: Vegetable Foods

Bakers, Three Rivers

An Order in Council, dated October 15, and published in the Labour Gazette, October 24, 1942, amends the previous Orders in Council

for this trade (LABOUR GAZETTE, March, 1938, page 334, and March, 1940, page 281) by providing for a cost-of-living bonus in accordance with the federal government 1942 Order in Council P.C. 5963, beginning with the pay period following September 21, 1942, and with the bonus based on the rise in the cost-of-living since March-April, 1941.

Manufacturing: Fur and Leather Products

FUR INDUSTRY (WHOLESALE), MONTREAL

An Order in Council, dated October 22, and published in the *Quebec Official Gazette*, October 31, extends the term of this agreement (LABOUR GAZETTE, September, 1940, page 970, May, 1942; page 630, August, page 978 and September, page 1097) to November 30, 1942.

SHOE MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated September 25, and published in the *Quebec Official Gazette*, October 3, amends the previous Orders in Council for this industry (LABOUR GAZETTE, October, 1937, page 1156, March, 1938, page 335, June, page 691, December, page 1423; July, 1939, page 728, October, page 1065; September, 1940, page 971, December, page 1309; and June, 1941, page 703) by giving a classification of fitting room operations and fixing the following minimum hourly rates for these operations: class 1 employees 23 cents in Zone I, 21 cents in Zone II, 20 cents in Zone III and 19 cents in Zone IV; apprentices to Class I employees and Class 2 employees, 19 cents in Zone I, 16½ cents in Zone II, 15½ cents in Zone III and 14½ cents in Zone IV; apprentices to Class 2 employees and Class 3 employees 14½ cents in Zone I, 12½ cents in the other three Zones; the period of apprenticeship for classes 1 and 2 is a six month period.

Manufacturing: Printing and Publishing

PRINTING TRADES, MONTREAL

An Order in Council, dated September 25, and published in the *Quebec Official Gazette*, October 3, extends the term of this agreement (LABOUR GAZETTE, June, 1941, page 704; April, 1938, page 452; June, 1936, page 546, December, page 1181; October, 1939, page 1065; February, 1941, page 183, April, page 473, December, page 1572; May, 1942, page 631, July, page 856) to December 31, 1942.

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL

An Order in Council, dated October 8, and published in the *Quebec Official Gazette*, October 10, amends the previous Orders in Council for this industry (LABOUR GAZETTE, November, 1941, page 1424, and June, 1942, page 738) by extending the term of the agreement to December 31, 1943. Wages: with the authorization of the Regional War Labour Board, the basic minimum hourly wage rates were raised 10 cents per hour, making them: mechanics 88 cents, fitters 78 cents, helpers (shop or field) 68 cents, erectors 88 cents.

Construction: Buildings and Structures

ELEVATOR CONSTRUCTION INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated September 25, and published in the *Quebec Official Gazette*, October 3, extends the term of this agreement (LABOUR GAZETTE, September, 1941, page 1159, December, page 1573, June, 1942, page 738, August, page 978, and September, page 1097) to October 31, 1942.

From this date this industry is included under the building trades agreement for Montreal, which is summarized below.

BUILDING TRADES, THREE RIVERS

An Order in Council, dated October 22, 1942, and published in the *Quebec Official Gazette*, October 31, amends the previous Orders in Council for this industry (LABOUR GAZETTE, May, 1940, page 497, June, page 609, August, page 866, March, 1941, page 334, August, page 1010; September, 1942, page 1097). Under the provisions of the federal government 1942 Order in Council 5963, and with the approval of the Regional War Labour Board, a cost-of-living bonus of 5 cents per hour over the hourly rates of wages paid to each employee on November 15, 1941, such bonus to be effective without change until October 17, 1943.

BUILDING TRADES, ST. JEROME

An Order in Council, dated October 22, and published in the *Quebec Official Gazette*, October 31, amends the previous Orders in Council for this industry (LABOUR GAZETTE, May, 1940, page 499; March, 1941, page 334; May, 1939, page 529; September, 1941, page 1160, and December, page 1573) by providing that under the provisions of the federal government 1942 Order in Council 5963, and with the approval of the Regional War Labour Board, a cost-of-living bonus of 5 cents per hour over the hourly rates of wages paid to each employee on November 15, 1941, such bonus to be effective without change until October 10, 1943.

ORNAMENTAL IRON AND BRONZE INDUSTRY, MONTREAL

See above under: Manufacturing: Metal Products.

BUILDING TRADES, MONTREAL

An Order in Council, dated September 25, and published in the *Quebec Official Gazette*, October 3, extended the term of the 1941 agreement (LABOUR GAZETTE, September, 1941, page 1160, December, page 1573; August, 1942, page 978, and September, page 1097) to October 31, 1942.

Another Order in Council, dated October 28, and published in the *Quebec Official Gazette*, October 31, makes obligatory the terms of a new agreement between: on the one part—The Builders Exchange, Inc. of Montreal and The Retail Merchants Association of Canada, Inc., Quebec Provincial Board, The Master Plumbers Association of Montreal and Vicinity, The Canadian Automatic Sprinkler Association, The Insulation Contractors Association; and on the other part—Le Conseil des Syndicats Catholiques Nationaux des Metiers de la Construction de Montréal et de la Banlieue (The Council of National Catholic Unions of the Building Trades of Montreal) and the Building and Construction Trades Council of Montreal and Vicinity, The United Association of Plumbers and Steamfitters, Local 144, the United Association of Sprinkler Fitters of the Province of Quebec, Local 379, The Heat and Frost Insulators and Asbestos Workers of Canada. The Sheet Metal Workers International Association, Local 116.

Agreement to be in effect from October 31, 1942, to April 30, 1943. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1941, page 1160, December, page 1573, and September, 1942, page 1097, with these exceptions:

In the wage scale the rate for terrazzo polishing machine operators (dry) is now 65 cents; kettleman (flooring only) is added at 64 cents.

The elevator construction industry through out the province which was formerly under a separate agreement (Labour Gazette, September, 1941, page 1159 and this issue) is now included in this agreement and with no change in conditions or basic wage rates.

A cost-of-living bonus of 5 cents per hour (applicable to all trades and occupations of this agreement, including elevator construction work) is payable in conformity with the federal government 1942 Order in Council 5963 and with a decision of the Regional War Labour Board; this bonus to be paid without change until September 1, 1943.

Transportation and Public Utilities: Water Transportation

Checkers and Coopers (Ocean Navigation), Montreal

An Order in Council, dated October 8, and published in the *Quebec Official Gazette,* October 17, make obligatory the terms of an agreement between certain shipping companies and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Locals 233 and 566.

Agreement in effect from October 17, 1942, to December 31, 1942, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the Labour Gazette, September, 1940, page 972, with the addition of a cost-of-living bonus of 7 cents per hour, to be adjusted in accordance with the provisions of the federal government 1942 Order in Council 5963. To the basic wage rates of 64 cents for checkers and 63 cents for coopers (10 cents above these rates for night work) a war bonus of 6 cents per hour had been added from August 27, 1940. The new cost-of-living bonus is to be paid in addition to the basic rate and the war bonus.

Longshoremen, Inland and Coastal Navigation, Montreal

An Order in Council, dated October 22, and published in the *Quebec Official Gazette,* October, 31, extends the term of this agreement (Labour Gazette, September, page 1097, August, page 978, July, page 856, and previous issues as noted therein) to February 28, 1943.

INDUSTRIAL STANDARDS ACTS, ETC.

Schedule of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario and Manitoba

In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers or employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and of amendments to them are given in the Labour Gazette, October, 1940, page 1077. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Ontario

Manufacturing: Textile Products

Ladies' Cloak and Suit Manufacturing Industry, Province of Ontario

An Order in Council, dated October 8, and published in *The Ontario Gazette,* October 31, amends the schedule of wages and hours for this industry (Labour Gazette, November, 1941, page 1427, March, 1939, page 337, February, 1938, page 216, and February, 1937, page 219) by making certain changes in overtime conditions by which more overtime may be worked under special circumstances or conditions if permitted by the Advisory Committee. The powers of the Advisory Committee and certain terms are further defined.

Manitoba

Manufacturing: Vegetable Foods

Bakers, Winnipeg and District

An Order in Council, dated August 28, and published in *The Manitoba Gazette,* September 5, makes binding the terms of a new schedule under the Fair Wage Act, Part II. This schedule is in effect from September 15, 1942, to April 30, 1943, and thereafter until a new schedule made or this one cancelled, and applies to the City of Winnipeg and within 15 miles of it. This schedule is similar to the one previously in effect and summarized in the Labour Gazette, May, 1941, page 595, with these exceptions:

Minimum weekly wage rates for employees under 18 years of age are $12 during first month, $13 during second month and $14 during third month, (a 48 hour week), after which the helpers' rate to apply. Vacation: as in the previous agreement, one week's vacation with pay is given employees with one year's service; it is now further provided that after two years' service, employees will receive two weeks' vacation.

PRICES, RETAIL AND WHOLESALE IN CANADA, OCTOBER, 1942

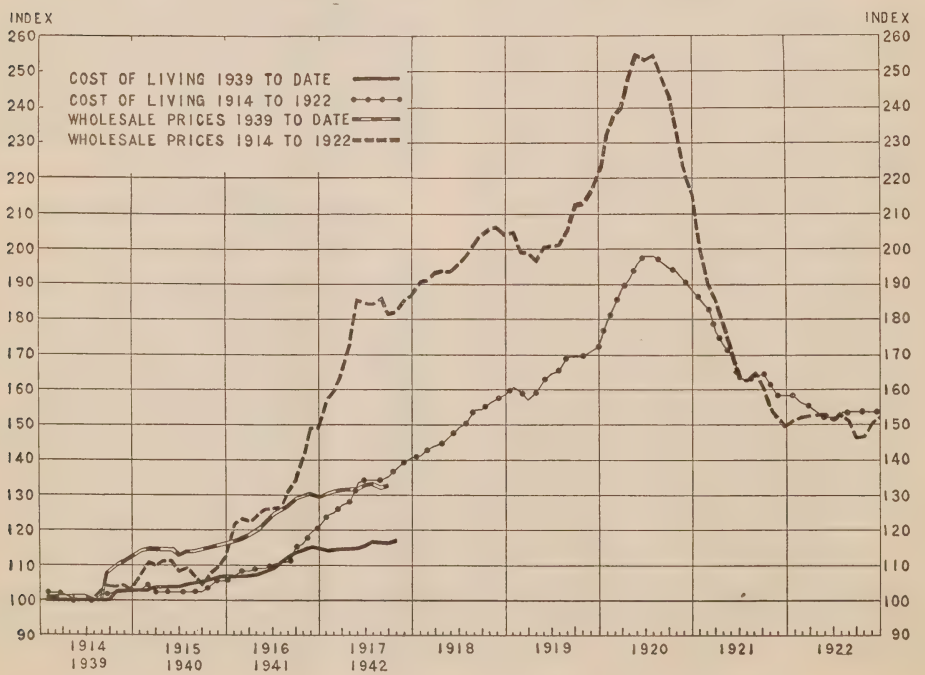
Cost of Living, Prices of Staple Articles and Index Numbers

THE official index of the cost of living was slightly higher at the beginning of October than one month earlier but was fractionally lower than at the beginning of July, the date used for the quarterly adjustment of the cost-of-living bonus. This index on the base period 1935 to 1939 as 100 was 117·8 for October 1; 117·4 for September; 117·9 for July; 115·5 for October, 1941; 107·0 for October, 1940; and 100·8 for August, 1939. The slight advance during the month under review was due mainly to advances in the food group chiefly in the prices of eggs and oranges with less important increases in butter, lard, canned vegetables and lemons. The prices of certain meats, cheese and potatoes averaged somewhat lower. All other groups in the index were unchanged with the exception of fuel, in which a minor advance was recorded due to advances in the prices of coal.

The increase in the index since the outbreak of war was 16·9 per cent as compared with an increase of 35·3 per cent for the comparable period during the last war, namely, from July, 1914 to September, 1917.

After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 5963 of July 10, 1942, the index was 116·9 at October 1; 116·5 at September 1; 117·0 at July 1 and 114·6 for October 1, 1941. Since the introduction of price control last October, the index has advanced therefore 2·3 points as compared with an increase for the corresponding period of the last war of 21·1 points after the index was similarly adjusted to the base July, 1914 as 100.

Foods advanced to 30·7 per cent between August, 1939, and October, 1942; clothing 20 per cent; house furnishings and services 16·7 per cent; fuel and light 13·9 per cent; rent 7·2 per cent; and the miscellaneous group, 5·7 per cent.



In compliance with Order in Council P.C. 6219 as amended the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the Special War Revenue Act.

On page 1237 of this issue reference is made to a statement by the National War Labour Board as to any adjustment in the cost-of-living bonus for the three-month period November 15, 1942, to February 15, 1943.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527,

COST OF LIVING AND WHOLESALE PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939-100

DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA

*** For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236; 1926 to 1933 inclusive, 502, and since January, 1934, the number is 567.

became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE, for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In each issue of the LABOUR GAZETTE the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing, (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; Decem-

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 advanced to 96·8 for October from 96·0 for September. Besides an increase of 2·9 per cent in the animal products group during the month smaller advances were recorded in the wood and wood products group and in the vegetable products group. Comparative figures for the index at certain dates are 93·8 for October, 1941; 83·3 for October, 1940; and 72·3 for August, 1939. The advance since the outbreak of war was 33·9 per cent, compared with an increase of 80·9 per cent between July, 1914, and September, 1917, the comparable period during the last war. Consumers' goods advanced 33·3 per cent between August, 1939, and October, 1942, and producers' goods 33·9 per cent. Since the introduction of price control in October, 1941, wholesale prices have advanced 3·2 per cent, compared with an increase of 29·7 per cent between October, 1916, and October, 1917, the similar period during the last war.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of October of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (LABOUR GAZETTE, December, 1941, page 1462), the price ceiling established by P.C. 8527 (LABOUR GAZETTE, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (LABOUR GAZETTE, October 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 1358. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Beef prices at the beginning of October again averaged lower continuing the decline since July provided for under the regulations of the Wartime Prices and Trade Board. Sirloin steak averaged 36·9 cents per pound at October 1, 37·3 at September 1, and 39·6 at July 1. The price at October 1, 1941, was 34·6 cents per pound. The prices of other

cuts showed a similar movement. Lamb also, again averaged lower, the price at October 1 being 34·5 cents per pound as compared with 35·2 cents for September and 38·4 cents for August. Bacon at 44·2 cents per pound averaged slightly higher than in September and compared with 43·2 cents at October 1, 1941.

Supplies of fresh eggs showed the usual seasonal fall and the price advanced, fresh grades averaging 50·4 cents per dozen at October 1, 44·4 at September 1 and 43·0 at October 1, 1941. Stocks in storage at the beginning of October were about 15 per cent smaller than at October 1, 1941. Storage stocks of creamery butter at October 1 were reported to be higher than one month earlier but at about 52 million pounds were about 15 million pounds lower than at October 1, 1941. Production for the first 9 months of the current year was about 2·6 per cent lower than for the similar period of 1941. The price averaged 39·5 cents for October, 39·1 cents for September and 39·3 cents for October, 1941. Production of cheese for the first 9 months of 1942 was about 40 per cent greater than for the corresponding period in 1941. The price at 34 cents per pound was slightly higher than for September as compared with 32·7 cents for October 1, 1941. The price of potatoes again averaged lower with the marketing of the new crop. From an average of 43·7 cents for 15 pounds at September 1, the price dropped to 39·2 cents at October 1. The price for October, 1941, was 29·1 cents.

The following are the prices reported for Welsh coal, "cobbles" and "French nut" at the beginning of October, 1942: Halifax, $18.50; Charlottetown, $17.90; Saint John, $18.50; Quebec, $16.50; Three Rivers, $17.25; Sherbrooke, $18.75; St. Hyacinthe, $17.50; Montreal, $17.75.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the October issue of the Labour Gazette. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the Labour Gazette. In Great Britain both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1930=100, was 159·7 for September, as compared with the revised figures of 159·9 for August and 161·1 for July. The index number for September was thus 0·1 per cent lower than the August level. A decrease of 0·6 per cent in food and tobacco was due chiefly to an order reducing the price of onions by about 17 per cent and a fall in the price of potatoes. Industrial materials and manufacturers, as a whole, were up 0·2 per cent.

Cost of Living.—The index number of the *Ministry of Labour Gazette*, on the base July, 1914=100, was 200 at September 1, a decline of one per cent for the month. This was due almost entirely to a decline of about 2 per cent in clothing prices partly the result of the removal of the purchase tax from utility cloth and apparel.

Newfoundland

Cost of Living.—The index number of the Department of Health and Welfare, on the base October 1, 1938=100, was 144·8 at October 3, an advance of 2·1 per cent for the month, due to higher prices in the food, fuel and light and clothing groups.

New Zealand

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1926-1930=1,000, was 1,443 for June, an increase of 1·4 per cent for the month. Of the seven main groups of commodities, all showed advances except the non-metallic minerals and their products group which was slightly lower.

Cost of Living.—The official index number of retail prices, on the base 1926-1930=1,000, was 1,097 for June, an advance of 0·1 per cent for the month, and of 10·3 per cent over the August, 1939, level. The increases in June over the May level occurred chiefly in the clothing and miscellaneous groups.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 99·6 for September, an increase of 0·4 per cent for the month. Increases were recorded in farm products and foods (including a rise of 5·3 per cent in dairy products). Changes in other groups were all less than ½ of one per cent.

COST OF LIVING.—The index number of the Bureau of Labour Statistics, on the base 1935-1939=100, was 117·8 at September 15, an increase of 0·3 per cent for the month. There were increases of 0·4 per cent in food, 0·5 per cent in clothing and in housefurnishings and 0·3 per cent in the miscellaneous group; there was no change in rent nor in the fuel, electricity and ice group.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Worker Hired for Stated Task who Quit When Assigned to Other Work Awarded Damages by Quebec Court

ACCORDING to a recent decision of Mr. Justice Loranger of the Montreal Supreme Court, a worker who is not employed at the job for which he was hired has a right of action against the employer even though he receives the contract rate of wages. Damages of $140 and costs were therefore awarded to a claimant who sued on behalf of his wife who had been out of work for a month before she could find employment of the kind for which she was trained.

The court accepted the following facts as proved. The wife had given up her previous job to take employment with the defendant at a higher rate of wages. She was an expert canvas worker and was told that she was to be employed at this work, replacing one Mlle. Lanthier who was expected to leave. When she reported for duty, however, she was placed at other work. Her husband, the plaintiff, remonstrated with the employer but merely received the reply that it should make no difference to his wife as long as she received the rate of wages at which she had been hired. Since it became apparent that Mlle. Lanthier was not going to leave and that there was need for only one canvas worker, the plaintiff's wife quit her job. In spite of her best efforts it was a month before she could find employment again, and her husband therefore sued for the wages she had lost. *Alary* v. *Leibovitz,* Montreal Superior Court, October 16, 1942.

Workers in Photographic Studio Denied Rate Fixed for Office Workers under Quebec Minimum Wage Act

Following the principle that statute law which overrides the civil or common law regarding contracts must be strictly interpreted, the Quebec Court of King's Bench on June 26 allowed with costs the appeal of an employer from a judgment requiring him to pay to two of his workers the difference between the wages they actually received and those to which they claimed they were entitled by virtue of Order 4 under the Fair Wage Act, 1937 (now replaced by the Minimum Wage Act, 1940). Justices St. Germain and Barclay dissented.

The appellant operates a small photographic studio and the two respondents, who are sisters, were employed by him mainly at accepting films for developing and printing and sometimes at colouring the prints. They claimed that they were "secretaries" and thus entitled to the wages set by Order 4 for "office employees", a term defined in the Order as "all wage-earners employed in the work of directing, managing, accounting, bookkeeping and general clerical work in an industrial or commercial establishment . . . such as . . . cashiers, office clerks, secretaries. . . . . ." The lower court accepted this claim, and stated further that if they did not come under the section relating to "office employees" they were entitled to the even higher wages set by the Order for general classes of workers in industrial and commercial establishments.

The majority of the Appeal Court held that the respondents could not be regarded as "secretaries" in view of the type of work they did, and that moreover, the establishment in which they worked was not an office and had no office attached. The point that they might be entitled to the wages set for general employees could not be considered since that was not the ground on which the action had been brought.

Mr. Justice Barclay, in dissenting, held that "secretary" can be regarded as synonymous with "clerk", and that in any case the failure of the respondents to describe their employment accurately was of small consequence since it quite clearly was clerical employment in a commercial establishment and thus under the section relating to office workers. *Paré* v. *McDuff et al.* (1942) 8 Rapports Judiciares de Québec, Cour du Banc du Roi 581.

Alberta Employer Liable to Penalty for Failure to Pay Minimum Wage but not for Failure to Pay Wages within Specified Time

In decision rendered on September 29 and October 17, 1942, the Appellate Division of the Alberta Supreme Court dismissed one application by way of *certiorari* to quash a conviction under the Male Minimum Wage Act and allowed another made by the same applicant. The applicant, who is a saw-mill operator, was convicted in Magistrate's Court on the following charges: (1) that he failed to pay the minimum wage fixed for saw-mill workers by Order 18 under the Alberta Male Minimum Wage Act, and (2) that he violated the provisions of October 9 under the Act which requires an employer to pay the wages due to his workers within five days after the end of one month's employment or on demand thereafter.

In regard to the first charge the applicant contended that an employer does not commit an offence under the Act if he fails to pay a worker his wages but only if he contracts to pay a worker less than the legal minimum wage. The Court rejected this argument for the following reason: Order 18 requires the payment of a specified wage, Order 9 requires its payment within a specified time and sec. 16 (1) of the Act provides that an employer who contravenes any Order under the Act "by the payment of wages of less amount than the minimum wage fixed by the Board" is liable to a penalty and "in addition thereto shall upon conviction be ordered to pay to each employee the difference between the wages actually paid to him and the minimum wage fixed by the Board". If the applicant's interpretation were correct, the words "actually paid" would read "agreed or contracted to be paid". There were no costs since this was the first motion for an interpretation of the statute.

The Court allowed the application to have the second conviction quashed on the ground that the Act does not provide any penalty for a violation of Order 9. The respondent claimed that such a penalty is imposed by sec. 16 (2) which makes it an offence for an employer to neglect or fail to perform a duty imposed on him by the Act, but the Court held that this subsection applies only to the failure to perform a duty imposed by the Act itself whereas the applicant's omission consisted of a failure to perform a duty imposed by the Order. *Rex* v. *Hartt* (Nos. 1 and 2), (1942) 3 Western Weekly Reports, 385, 393.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1942

DURING the third quarter of 1942 there were 344 fatal industrial accidents, including deaths from industrial diseases reported by workmen's compensation boards, etc., as compared with 441 fatal accidents in the third quarter of 1941. Of the 344 fatalities in the period under review, 116 occurred in July, 123 in August and 105 in September. Fatal accidents during each year are recorded by quarterly periods in the issues of the LABOUR GAZETTE for May, August and November of that year, and in February of the following year.

The supplementary lists of accidents not reported in time for inclusion in the reports covering the periods in which they occurred, contain 25 fatalities for the first half of 1942, and one fatality for 1941.

In this series of reports it is customary to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Information concerning accidents was received from the provincial Workmen's Compensation Boards, the Board of Transport Commissioners of Canada, certain other official sources, as well as from the correspondents of the LABOUR GAZETTE, and newspaper reports.

Classified by groups of industries, the fatalities occurring during the third quarter of 1942 were as follows:—Agriculture, 42; Logging, 28; Fishing and Trapping, 7; Mining, Non-ferrous Smelting and Quarrying, 48; Manufacturing, 66; Construction, 53; Electric Light and Power, 5; Transportation and Public Utilities, 67; Trade, 4; Finance, 1; Service, 23.

Of the mining accidents, 21 were in "metalliferous mining", 21 in "coal mining", four in "non-metallic mineral mining and quarrying, n.e.s.", and two in "structural materials".

Of the accidents in manufacturing, four were in "vegetable foods, drink and tobacco", three in "textiles and clothing", one in "rubber products", nine in "saw and planing mill products", four in "wood products", five in "pulp, paper and paper products", 19 in "iron, steel and products", one in "non-ferrous metal products", five in "non-metallic mineral products", seven in "chemical and allied products", and eight in "shipbuilding".

In construction there were 29 fatalities in "buildings and structures", two in "railway", eight in "highway and bridge" and 14 in "miscellaneous".

In transportation and public utilities, there were 33 in "steam railways", one in "street and electric railways", 19 in "water transportation", one in "air transportation", 10 in "local and highway transportation", two in "telegraphs and telephones", and one in "unclassified".

There was one fatality in "wholesale", and three in "retail" trade.

Of the fatalities in service, 13 were in "public administration", two in "recreational", one in "custom and repair", and seven in "personal, domestic and business".

There was no serious disaster resulting in the loss of a large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows: On August 5, at Cadomin, Alberta, five miners were killed when crushed under a mass of wreckage when pent-up waters swelled by heavy rains burst into the mine shaft level causing a collapse of the workings and a flood in the mine.

A carpenter and his helper, engaged in logging at Duncan, B.C., lost their lives on July 28, when a tree fell across their car.

Two fishermen fell overboard and were drowned, near Steveston, B.C., on August 17.

Two sawmill workers were drowned at Stewiacke, N.S., on September 22, when flooded waters swept a cabin away.

On August 28, two explosives plant workers lost their lives in an explosion and fire in the plant, at Beloeil, Quebec.

When a hand car was struck by a train, on the Oba Subdivision, Ontario, two railway labourers were killed on July 18. Two firemen were fatally injured when a train was derailed owing to a washout, near Sherbrooke, Quebec, on August 17.

When a gas boat caught fire, at Port Alice, B.C., the owner and his helper were drowned on July 5. Two labourers were killed in an explosion that wrecked a steam vessel, near Three Rivers, Quebec, on September 17. On September 21, a first officer and two deckhands were drowned when washed overboard in a storm on Lake Superior.

In a fall from a peak of Mount Saurail, Alberta, on September 5, an engineering professor and a forest ranger were killed.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first half of 1942 has been compiled which contains 25 fatalities of which one was in logging, two in mining, non-ferrous smelting and quarrying, six in manufacturing, six in construction, one in electric light and power, six in transportation and public utilities, one in trade and two in service. One of these accidents occurred in January, one in February, four in April, two in May and 17 in June.

A further supplementary list of accidents occurring in 1941 has been made. This contains one fatality which was in agriculture and occurred in August.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

Minister—Hon. HUMPHREY MITCHELL

Deputy Minister—BRYCE M. STEWART Associate Deputy Minister—A. MACNAMARA

VOLUME XLII] DECEMBER, 1942 [NUMBER 12

MONTHLY SUMMARY OF MATTERS OF INDUSTRIAL INTEREST

Industrial Employment—Prices and Cost of Living—Business Statistics—Report of Employment and Selective Service Offices—Unemployment in Trade Unions—Strikes and Lockouts

EMPLOYMENT in Canada showed further expansion at October 1, resulting in a new all-time high; the increase from September was rather greater-than-average for the autumn according to the experience of past years, although it was smaller than at the beginning of October in 1939, 1940 or 1941. Statements were received by the Dominion Bureau of Statistics from 13,200 employers in the eight leading industrial groups, each establishment having a minimum of fifteen employees; their staffs included 1,403,353 men and 412,319 women, a total of 1,815,672 persons, as compared with 1,795,420 at September 1. The payrolls disbursed at October 1 amounted to $53,549,615, while the weekly earnings reported by the same employers at the beginning of September were $52,591,352. The latest per capita weekly average was $29.49, compared with $29.29 in the preceding period of observation, and $26.37 at October 1, 1941.

The index of employment (based upon the average for the calendar year 1926 as 100), stood at 181·3 at October 1, 1942, compared with 179·3 at September 1, 1942, and 165·8 at October 1, 1941. At the same date in immediately preceding years of the record, the index has been as follows: 1940, 136·2; 1939, 121·7; 1938, 116·7 and 1937, 125·7. The seasonally adjusted index also showed a slight increase, rising from 172·3 in the preceding month, to 172·5 at the beginning of October. These crude and corrected index numbers are calculated from returns furnished by employers in the following industries: manufacturing, logging, mining, communications, transportation, construction and maintenance, services (hotels and restaurants and laundries and dry-cleaning establishments), and trade. Where the index of employment in these industries has risen by 9·3 per cent from October 1, 1941, to October 1, 1942, that of payrolls has increased by 21·7 per cent.

Prices and the Cost of Living.—The official index of the cost of living calculated by the Dominion Bureau of Statistics and based upon prices during the period 1935 to 1939 as 100 was 118·6 at the beginning of November; 117·8 at the beginning of October; 116·3 for November, 1941; 107·8 for November, 1940; and 100·8 for August, 1939.

The advance since the outbreak of war therefore was 17·7 per cent. This compares with an increase of 37·2 per cent for the similar period of the last war. Since the introduction of price control the index, after adjustment to the base August, 1939 as 100, has advanced 3·1 points between October, 1941, and November, 1942, as compared with an increase of 23·2 points for the corresponding period during the last war after the index was similarly adjusted to the base July, 1914.

In wholesale prices the Dominion Bureau of Statistics index number on the base of 1926 as 100 was 97·1 for November as compared with 96·8 for October, 94 for November, 1941, and 72·3 for August, 1939. The increase between August, 1939, and November, 1942, was 34·3 per cent and between July, 1914, and October, 1917, was 82·1 per cent.

Business Statistics.—The table on page 1366 gives the latest statistics available reflecting industrial conditions in Canada. The index of the physical volume of business which reflects activity in mining, manufacturing, construction, electric power production, and in the distribution of goods was slightly higher in

67746—1½

November than in the preceding month due to a substantial advance in manufacturing. The other principal groups were lower. The indexes of mineral production and construction were both considerably lower than in October, 1941, but the other principal groups were higher. The index of employment at the beginning of October was at the highest point in the record being 9 per cent higher than in October, 1941, and about 52 per cent higher than at September 1, 1939.

The business index averaged 24·3 per cent higher for the first ten months of 1942 than for the corresponding period in 1941. Manufacturing production averaged 40·6 per cent higher in the same comparison, wholesale sales 11·8 per cent higher, retail sales 15·1 per cent, and the general index of employment 15 per cent higher. Cumulative figures for the 10 months' period show factory cheese production 39·7 per cent more in 1942 than in 1941, while creamery butter production was 2·3 per cent lower. The number of cigarettes released increased 15·8 per cent, steel ingot production 31 per cent, electric power production 13·5 per cent and the number of cars loaded 6·3 per cent. The production of flour declined 4·9 per cent, and newsprint 5·1 per cent. Cattle slaughterings declined 6·2 per cent and the value of construction contracts 29 per cent.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA*

(Official statistics except where noted)

Report of the Employment and Selective Service Offices.—Reports received from the Employment and Selective Service Offices during October, 1942, showed a marked increase in business transacted, both when compared with the preceding month and the corresponding period a year ago, this computation being based on the average number of placements recorded daily. All industrial divisions participated in the increase under both comparisons, the gain in manufacturing being most pronounced. Noteworthy increases were made in services and construction under the former comparison and in trade and construction under the latter. Vacancies in October, 1942, numbered 271,118, applications 252,595 and placements in regular and casual employment 161,385.

Unemployment in Trade Unions.—At the beginning of November, 1942, the percentage of unemployment among trade union members stood at 0·7 in contrast with percentages of 0·8 in October and 3·1 in November, 1941. The percentage for November was based on returns compiled from 2,246 labour organizations with a total membership of 389,236 persons.

Strikes and Lockouts.—During the month of November, 1942, there were 27 strikes and lockouts recorded, involving 20,490 workers and causing a time loss of 103,770 man working days, as compared with 26 strikes in October, 1942, with 6,107 workers involved and a time loss of 26,926 days. The figures for the month of November, 1941, showed 12 strikes, involving 4,740 workers and causing a time loss of 41,764 days. During the month under review one strike of motor vehicles factory workers at Windsor, Ont. accounted for more than 70 per cent of the workers involved and over 80 per cent of the time loss.

Of the 27 strikes during November of this year 25 were terminated during the month. Three resulted in favour of the workers, four in favour of the employers, six were compromise settlements and 12 were indefinite in result. Two strikes involving 297 workers were recorded as unterminated at the end of the month.

NOTES OF CURRENT INTEREST

Arthur MacNamara appointed Director National Selective Service

Following the resignation of Elliott M. Little as Director of National Selective Service, Arthur MacNamara, Associate Deputy Minister of Labour, was appointed on November 19 to take over direction of National Selective Service.

Mr. MacNamara was formerly Deputy Minister of Public Works and Labour in the Province of Manitoba. In January, 1940, at the request of the late Hon. Norman Rogers, the Manitoba Government loaned Mr. MacNamara to the Federal Government to organize the Dependents' Allowance Board. He became Acting Chairman of this Board, a position which he held until he was appointed Associate Deputy Minister of Labour for the Dominion Government.

On January 7, 1941, Mr. MacNamara was appointed Acting Chief Commissioner of the Unemployment Insurance Commission and remained at this post during the establishment of the nation-wide organization of the Commission. In March, 1942, he returned to the Department of Labour to resume his duties of Associate Deputy Minister of Labour on a full time basis.

In a statement to the press, Mr. MacNamara indicated that the man-power policy being followed by National Selective Service could be stated briefly as follows: (1) Men required for the armed forces are to be supplied; (2) the needs of war plants are to be met with man-power and woman-power; and, to the extent necessary, less essential industries will be curtailed; (3) voluntary effort is to be used where possible; (4) when the voluntary system falls down, "which it has not yet", more compulsory methods will be adopted.

Resignation of Dr. Stewart as Deputy Minister

After over two years of service in the administration of Canada's wartime labour policy, during which period he initiated much of the program now in effect, Dr. Bryce M. Stewart, resigned his post as Deputy Minister of Labour to resume his directorship of research with Industrial Relations Counsellors, Rockefeller Foundation, New York, from which institution he was on loan to the Dominion Government.

In announcing the return of Dr. Stewart to the Rockefeller Foundation, the Minister of Labour, Hon. Humphrey Mitchell, stated that Dr. Stewart's outstanding service to Canada's wartime program would not be entirely severed as the former deputy would continue to act as a special adviser to the Department.

Graduating from Queen's University in 1911, Dr. Stewart entered the Department of Labour in 1914 as a labour research worker and statistician. In June, 1917, he was promoted to the editorship of the LABOUR GAZETTE. The aftermath of the war with its problems of employment then engaged his activities, and he was appointed Director of the Employment Service of Canada in December, 1919, a post which he held until 1922.

From 1922-27, Dr. Stewart was in charge of the administration of the employment ex-

changes under the employment insurance program established by the Amalgamated Clothing Workers of America. In 1927 he became a member of the Industrial Relations Counsellors and from 1930-31 he was a member of President Hoover's emergency council for employment. In 1930 he became a member of the state advisory council, New York employment service, and in 1933 was appointed to the Federal Advisory Council, United States Employment Service.

Dr. Stewart has contributed to modern labour studies and surveys in a series of books and articles, dealing particularly with employment office practice and procedure, labour laws, and unemployment compensation.

Reference to Supreme Court respecting validity of Emergency Legislation

On November 11, 1942, a County Court Judge at Toronto held that certain orders issued by the Controller of Supplies were ultra vires on the ground that the Governor in Council did not have power under the War Measures Act to delegate legislative power to a Controller, Board or other body. Following this decision several other magistrates dismissed charges under orders of the Wartime Prices and Trade Board and under the Selective Service Regulations.

As a result of the doubt raised as to the validity of such a large body of emergency orders, the Government has referred the question in issue to the Supreme Court of Canada by way of a reference, hearings in which began on December 14.

The reference asks a determination as to the validity of Order in Council P.C. 4996, dated July 10, 1941, establishing the Regulations Respecting Chemicals, and of an order of the Controller of Chemicals passed pursuant to that Order in Council and purporting to restrict the production and use of glycerine for purposes other than the manufacture of munitions.

It is expected that the decision of the Supreme Court of Canada will settle the question as to the validity not only of the orders of the various Controllers of the Department of Munitions and Supply but also the orders of the Wartime Prices and Trade Board, the Foreign Exchange Control Board, the National War Labour Board, as well as orders issued by the Director of Selective Service and other similar authorities.

Wartime Wages Control Order extended to municipalities

According to a new Order in Council (P.C. 11096, December 10, 1942) Canada's Wartime Wages Control Order may now apply to municipalities of the various provinces, with the consent of the province concerned.

The Wartime Wages Control Order (P.C. 5963, July 10, 1942) had previously stated that municipalities were not to be classified as "employers" within the meaning of the Order. The new amendment, which was introduced on the recommendation of the Minister of Labour, indicates that wages of municipal employees may become stabilized and subject to cost-of-living bonus provisions, with the consent of the province within which the municipality is situated. The text of the Order is as follows:—

Whereas representations have been made to the Minister of Labour that it is desirable to provide that municipalities may, with the consent of the Lieutenant Governor in Council of the province in which the municipalities are situated, be employers subject to the provisions of the Wartime Wages Control Order (Order in Council P.C. 5963, dated July 10, 1942);

Therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under and by virtue of the powers conferred by the War Measures Act, is pleased to amend the Wartime Wages Control Order (P.C. 5963, dated July 10, 1942) and it is hereby amended by striking out the word "or" at the end of paragraph (iv) of subsection one of section eleven thereof and adding thereto the following proviso:

"Provided that if the Lieutenant Governor in Council of a Province by order consents, or if a Minister of the Government of a province authorized in that behalf by the Lieutenant Governor in Council of such province signifies in writing to the Minister of Labour that he consents to the application of the provisions of this Order in respect of a municipality or municipalities in such province, such municipality or such municipalities shall on and after the date of such consent be an employer or be employers respectively subject to the provisions of this Order."

Appointment of General Supervisor of Japanese Reallocation

The Minister of Labour, Hon. Humphrey Mitchell, announced recently that Mr. George Collins of Winnipeg had been appointed General Supervisor of Japanese Reallocation under the direction of the Deputy Minister of Labour. The appointment of Mr. Collins, former Assistant Deputy Minister of Public Works for Manitoba, is effective immediately.

The Minister gave as reasons for the appointment the fact that the initial step in the evacuation was completed, namely, the removal of all Japanese from the restricted areas of British Columbia, and that the Commission members accordingly took the view that the usefulness of the British Columbia Security Commission as an administrative body was over.

The Minister considered that the Commission had carried out a very difficult task in a most efficient and humane manner, and that a great deal of credit was due to the Commissioners, Major Austin Taylor and Messrs. J. Mead and J. Shirras, and also to his Asso-

ciate Deputy, Arthur MacNamara, who had a great deal to do with the direction of the movement.

The Minister also issued a statement showing the general results attained in Japanese evacuation as at October 31, 1942, which reads in part as follows:—

"Current R.C.M.P. records indicate that there were 23,546 Japanese resident in Canada prior to the formation of the Commission. Of these 21,349 were located in the restricted areas. A total of 579 persons evacuated the restricted areas voluntarily prior to March, 1942, and are spread across Canada but under R.C.M.P. supervision. As of this date we have evacuated 19,867 and to the best of our knowledge there remain roughly 225 Japanese including our Hastings Park hospital population of 105. Also, there are a few Japanese families where the husband is a Japanese and the wife is a white woman and vice versa, with their children, who will be permitted to remain in the protected areas for the time being by instructions from the Department of Justice."

The Commission reported that evacuated Japanese had been assigned to the following projects in different sections of the country: road camp projects; sugar beet projects; interior housing projects; self-supporting projects (under supervision); and industrial projects. In addition, a number of Japanese had been given special permits to approved employment.

A long-range policy is being developed to assimilate the Japanese as far as possible into productive employment across Canada where their services will aid the Canadian war effort.

Control of employment of university science students

An Order in Council has been passed which is designed to make the most effective use, for the war effort, of university-trained science students. The new regulations, which came into effect on December 1, require all university science students to make known whether they wish to volunteer in the armed forces as technical officers. Science students who do not volunteer for such service must upon graduation accept employment in such essential work as the Minister of Labour may require.

The Order (P.C. 9566) was passed on the recommendation of the Minister of Labour, having been approved in principle by the Department of Munitions and Supply, the Department of National Defence, and several Canadian universities.

The Order requires the armed forces of Canada, the government departments and agencies of the Dominion and provinces, and all other employers of technical personnel, to supply the Minister of Labour with information as their present or future requirements of technical persons for essential work. Universities are to furnish information as to their science students; and if the Minister finds the number insufficient to meet requirements he may recommend steps to train the necessary number of technical persons.

Before a person is permitted to commence or continue work as a science student, he must fill out a prescribed form indicating whether he wishes to volunteer for military service as a technical officer. Universities will supply the Minister with the names of those who wish to volunteer for technical duty. The Minister will thereupon submit lists of selected names for the consideration of the various branches of the armed forces.

Every science student must undergo medical examination at the requirement of the Department of National Health.

If the Minister finds that the number wishing to volunteer is inadequate, he "may request any science student to accept such status in the reserve army and undergo such military studies and duties, whether during the academic year or not, as he may specify". No university may retain any person as a science student who refuses to comply with such a request.

The Departments of National Defence and of Munitions and Supply are to provide such facilities for the training of science students as the Minister may from time to time require.

The Order states that those science students who do not volunteer for service in the armed forces must, upon completing their courses, "accept employment in such essential work as the Minister may require and remain in such employment during each day the Minister so requires".

Rigid restrictions are placed upon the solicitation of science students for employment. No person, "whether acting or pretending to act on behalf of any of the armed forces or any department or agency of government, or not", shall interview, solicit, offer employment to, or take into employment, any science student either before or after graduation, with regard to any employment, office, or position.

Penalties for contravention of these regulations consist of a fine of fifty to five hundred dollars or imprisonment of one month to a year, or both, for a first offence, with higher penalties for any subsequent offence.

British shipbuilding workers visit U.S. and Canadian shipyards

A number of representatives of the principal shipbuilding trade unions of the United Kingdom will visit Canadian shipbuilding yards to study our methods of production, it was announced on November 30 by the Hon. Humphrey Mitchell, Minister of Labour.

Arrangements have been made in Great Britain with the Rt. Hon. Ernest Bevin, Minister of Labour, and the Rt. Hon. A. V. Alexander, First Lord of the Admiralty, to have these representatives visit shipbuilding yards in the United States and Canada. It is expected that the delegation which will leave Great Britain in the near future will follow out an itinerary in the United States and then will visit shipyards in the St. Lawrence, Vancouver, and Great Lakes districts.

The delegation consists of 72 representatives in all of the boilermakers, shipwrights, plumbers, and electrical trade unions. They will be particularly interested in observing methods used in the large scale production of welded ships and other recent developments.

New committee established to deal with housing shortage

In view of the housing shortage which exists in certain localities in Canada and the scarcity of materials and services required for the carrying out of new housing developments, a Committee has been established to co-ordinate the activities of the various governmental organizations concerned with matters affecting housing and the use of building materials. The new body, to be known as the Housing Co-ordination Committee, will plan to make the most efficient and economical use of presently available housing accommodation, and of such materials as may be available for the provision of new dwellings.

In future no housing construction, the cost of which exceeds one thousand dollars, is to be undertaken by any government department or agency without the approval of the Housing Co-ordination Committee.

The members of the Committee, which was established by Order in Council (P.C. 10797), are as follows: The Chairman of the Wartime Industries Control Board; the Controller of Construction appointed by Order in Council P.C. 6657 of August 26, 1941; the President of Wartime Housing Limited; the Associate Deputy Minister of Labour and Director of National Selective Service; the Director, Housing Branch, Department of Finance; and the Real Property Administrator appointed by the Wartime Prices and Trade Board with the approval of the Governor in Council.

The Wartime Prices and Trade Board, acting through the Real Property Administrator, is directed to take all expedient measures to regulate to the best advantage existing housing and commercial accommodation, pursuant to such authority as is conferred from time to time by the Governor in Council; also to make surveys of existing accommodation and make recommendations to the Housing Co-ordination Committee regarding the need for additional construction.

Wartime Housing Limited will continue to make provision for the needs of munition workers by means of temporary housing, in areas where permanent housing is found to be inadequate.

Industrial Disputes Investigation Act

Seventeen applications for the establishment of Boards of Conciliation and Investigation were received during the month of November, and the constitution of two boards was completed. Three boards submitted their reports. Three applications were rejected. Eleven disputes were referred to Industrial Disputes Inquiry Commissioners for investigation and nine reports were received from Industrial Disputes Investigation Commissioners. Four applications for the establishment of boards were withdrawn, the disputes being recorded as settled.

Full particulars with regard to recent proceedings under the Industrial Disputes Investigation Act will be found elsewhere in this issue in the section commencing on page 1374.

Increased hours for Government employees

Hours of work for employees in the Public Service of Canada have been increased to a minimum of 7½ hours Monday to Friday, and 4 hours on Saturday. The new system, which came into effect on December 7 as the result of an Order in Council (P.C. 1/10800), affects government employees across the Dominion, and is to continue for the duration of the war.

For the city of Ottawa a special plan of staggered hours was included in the Order, designed to ease the transport situation which has become strained due to the increased number of workers in the city.

Controller of Loading Operations for Halifax appointed

Captain R. G. Perchard, Assistant Harbour Master at the Port of Montreal, on the staff of the National Harbours Board, was appointed Controller of Loading Operations for the Port of Halifax, on November 26, 1942, to replace V. C. MacDonald who was appointed on April 30, 1942, but who has now been appointed Acting Assistant Deputy Minister of Labour effective September 1, 1942.

Decision by B.C. Supreme Court in dispute involving union recognition

In a recent decision the British Columbia Supreme Court dismissed an action brought by a lumber company for an injunction restraining a board of arbitration from proceeding with the arbitration. The company declared that no "dispute" existed between the com-

pany and its employees; i.e. no dispute within the meaning of the British Columbia Industrial Conciliation and Arbitration Act.

The question arose out of the failure of the company to enter into a collective agreement with a branch of the International Woodworkers of America. The company claimed that this did not constitute a dispute within the terms of the Act.

The case (details of which may be found in the article entitled "Recent Legal Decisions Affecting Labour," on page 1505 of this issue) is being appealed to the Supreme Court of Canada.

Fair wages and conditions in government contracts in Britain

A new Fair Wages Resolution containing the Fair Wages Clauses to be inserted in Government contracts has been drafted in Britain to replace the existing Resolution adopted in 1909. Parliamentary action on the draft Resolution is not expected until after the war. Wages and working conditions are now governed by the Conditions of Employment and National Arbitration Order of 1940 (LABOUR GAZETTE, 1940, p. 760) which was passed under the Defence (General) Regulations, 1939, and provides for the settlement of industrial disputes and the adoption throughout an industry of the working conditions established by negotiation or arbitration.

The original Resolution of 1909, which developed from one adopted in 1891 stipulated that contractors must adopt wage rates and hours "not less favourable than those commonly recognized by employers and trade societies," or, if there were no recognized conditions, no less favourable than those prevailing amongst good employers in the district where the work was done or in the nearest comparable district. Moreover, the Resolution stated that "the conditions of employment generally accepted in the district in the trade concerned shall be taken into account in considering how far the terms of the Fair Wages Clauses are being observed." Contractors could not sub-let contracts, except where customary in the trade, without the permission of the Government and were responsible for observance by their sub-contractors of the Fair Wages Clauses.

The new draft Resolution definitely stipulates that contractors must provide fair conditions of work as well as fair wages and must grant them to all their employees in any establishment where the contract is being executed irrespective of whether the workers are employed on the contract. Contractors must also recognize the freedom of their workers to belong to trade unions.

Before an employer is placed on a department's list of firms to be invited to tender, he must furnish assurance that he has observed the general terms of the Resolution for at least the previous three months. The fair wages and working conditions which must be observed are those established in the district for the industry or trade concerned by joint machinery of negotiation or arbitration. If no conditions have been so established, contractors must observe conditions equivalent to those observed by other employers, not necessarily in the same district, whose general circumstances in the trade or industry are similar to the contractor's circumstances. This clause is to replace the provision requiring contractors to adopt the conditions observed by "good employers" in the district. Disputes as to whether fair wages are being paid will no longer be settled by the Minister of the contracting department as before, but will, if not settled by negotiation, be referred by the Minister of Labour and National Service to an independent tribunal for decision. Contractors are required to furnish the contracting department with a list of sub-contractors and, as before, are to be responsible for the observance of the Resolution by sub-contractors. The practice of requiring contractors to post a copy of the Fair Wages Resolution is made obligatory in the proposed Resolution.

Hours of young persons in Britain in building and engineering

Weekly hours of young persons under 18 in Great Britain employed in building and civil engineering operations have been limited to 48, for those under 16 and to 54 for those aged 16 and 17, by a recent Order effective November 29. The Factories Act prohibits the employment of young persons under 16 for more than 44 hours a week and of boys and girls over 16 and under 18 for more than 48 without special authorization, although a limited amount of overtime is allowed and exceptions are permitted for certain industries. Emergency Orders issued during the war have relaxed these standards in many cases.

The new Order also permits the employment of young persons under 18 on Sundays, contrary to the Factories Act, if a whole holiday is granted in the week immediately preceding or following the Sunday worked. Young persons may not be continuously employed for more than five hours including rest pauses, without a half-hour break for lunch or rest. The Factories Act only allows a five-hour spell if a ten-minute interval is granted in the middle of it; otherwise four and a half hours is the limit.

If a young person works for more than one employer, his employers must keep records of his working hours and intervals to ensure that his employment is in accordance with the Order.

"Maintenance of membership" clause in United States union contracts

The United States War Labor Board has adopted a resolution clarifying the status of union members covered by its standard "maintenance of membership" clause in union contracts.

At a time when unions have voluntarily given up the right to strike, this clause was devised by the Board as a method of protecting unions in maintaining their status and membership. (LABOUR GAZETTE, July, 1942, page 812). The clause, as it appears in a typical contract approved by the Board, sets forth that after a specified date no existing members of the union concerned may terminate their membership for the duration of the contract without losing their jobs. Before this clause of the contract comes into effect, however, union members are given 15 days during which they can resign from the union if they do not want to be required to maintain their membership in good standing as a condition of employment for the duration of the contract.

The Board declares that certain abuses have arisen in connection with the application of the clause relating to this 15-day "escape period". Union members in several cases have been confused as to their withdrawal rights and employers have attempted to circumvent the operation of the clause by various devices, such as encouraging employees to resign from employment and thereafter rehiring them as non-union employees, or by inducing them to resign from the union during the 15-day period.

The Board, therefore, resolved to set aside any union rules, regulations, laws or constitutional provisions which would otherwise make ineffective the right of the union members to withdraw during the 15-day period. It also resolved that employers "shall refrain from attempting to influence employees to resign from the union and from adopting other means or methods of interfering with the voluntary action and free choice of the employees."

Employees are thus protected, the Board states, from interference by either unions or employers with their freedom to withdraw without losing their jobs.

Power over food program given U.S. Secretary of Agriculture

Control over the production and distribution of food and other farm commodities in the United States has been given to the Secretary of Agriculture, Claude Wickard.

An executive order signed by President Roosevelt has placed Mr. Wickard in charge of determining the food requirements of the civilian population, the armed services, the lend-lease administration, and foreign governments; of formulating and conducting a program to produce the necessary goods; and of allocating them when they are produced.

To facilitate administration of the food program, two agencies are being established within the Department of Agriculture, the food production administration, and the food distribution administration. An advisory committee will concern itself with food requirements.

Mr. Wickard has also been placed in charge of all food rationing in the United States.

Determining optimum hours in United States war plants

To supplement the statement of policy regarding maximum hours of work issued by eight agencies of the United States Government (LABOUR GAZETTE, August, 1942, page 881), the United States Division of Labor Standards of the Department of Labor has published a check list by which individual plants may determine their optimum working hours. The Federal agencies recommended a 48-hour week and declared:

> Plants which are now employing individual workers longer than 48 hours a week should carefully analyze their present situation with respect to output and time lost because of absenteeism, accident, illness, and fatigue. They should re-examine the possibilities of training additional workers now, in order to lessen the need for excessive overtime during the long pull ahead. As rapidly as is feasible these plants should introduce the hours-schedules that will maintain the best possible rate of production for the duration.

The check list explains how plants may determine the optimum hours for each type of work by keeping records of output, accidents, illness, voluntary absenteeism, labour turnover, spoiled work and grievances, and observing differences in the statistics under different hours-schedules. It also suggests that the conclusions derived from the records be checked by consultations with foremen, gang bosses, union representatives and veteran employees.

Not only hours, but lunch periods, rest breaks and the weekly day-off should be adjusted to secure maximum production. In arranging shift systems, consideration should be given to such matters as transport facilities available when shifts change over, type of community in which the plant is located and hours when recreational and social activities are available, supply of workers to provide relief shifts, rotation of shifts to prevent fatigue while avoiding undue disruption of living habits, and opportunities for dissatisfied employees to change shifts.

Limitation on hours of work in Australia

Regulations were issued in Australia on October 19 to limit hours of work and thus increase output by reducing industrial fatigue. Effective November 1, persons aged 18 and over may not work more than 56 hours per week. Up until November 30 a maximum of 60 hours was allowed in order to permit adjustments in shift rosters, special transport, etc. The hours of persons under 18 are limited to 48 per week. The Government refrained from setting a compulsory limit of 52 hours for women because in some factories it would be impracticable for the women to work shorter hours than the men. It was expected, however, that elsewhere the hours of women would be limited to 52.

In cases of emergency, employees may be required to work more than the permitted hours up to three weeks in any three months, or for a longer period with the approval of the Director-General of Munitions or Aircraft Production or any other authorized person.

These regulations supersede any provisions concerning hours in any industrial award or determination under the Commonwealth Conciliation and Arbitration Act or in the various State laws.

New Zealand industrial man-power regulations

The industrial man-power provisions of the New Zealand National Service Emergency Regulations, 1940, providing for the mobilization of man-power for industry and the Armed Forces, and the Industrial Absenteeism Emergency Regulations, 1942 (LABOUR GAZETTE, August, 1942, page 935) have been consolidated as the Industrial Man-power Emergency Regulations of October 14, 1942. The policy of controlling employment in essential industries has not been materially changed but the new consolidation contains several minor amendments.

Administration of the regulations has been transferred from the Minister of National Service and his Director of National Service to the new Minister of Industrial Man-power and a Director. A man-power inventory is to be kept by requiring every employer within two weeks of hiring a worker to report this fact to the District Man-power Officer. Formerly, they only had to report persons leaving their employ. District Man-power Officers are authorized to enter and inspect any premises during working hours, interview workers and examine books and documents. Any person may be required to appear before a District Man-power Officer, answer questions, supply information and produce books or documents. A worker in an essential undertaking may now be transferred to a higher-paid job in the same undertaking without the consent of the District Man-power Officer. Before, he could only be moved without the latter's consent if his job was abolished or temporarily unavailable, or if his services were temporarily required for work of greater urgency. Workers in essential undertakings may not receive a lower rate of wage than they were paid before the undertaking was declared essential, unless they are transferred to a lower paid job in accordance with the regulations.

Guaranteed Minimum Wage in Essential Undertakings.—The Minimum Wage (Essential Undertakings) Order was issued by the Minister of Labour on October 1, 1942, under the authority given him by the Man-power regulations to fix minimum weekly wages guaranteed to workers in essential undertakings who comply with certain conditions such as availability for work and willingness to accept alternative employment in the undertaking when their usual job is temporarily unavailable. This Order applies to all essential undertakings where no minimum wage is prescribed by an award, agreement, act, regulation or other order. The guaranteed weekly wage is to be the equivalent of the worker's ordinary weekly earnings exclusive of overtime, bonus or other special payments, but may not exceed £5, 10s in the case of adult male workers, £2, 17s, 6d for women workers and £1, 15s for workers under 21. Women replacing men and performing men's work are to be classed as adult males under the Order. The ordinary weekly earnings are to be computed by multiplying the worker's ordinary time-rate, or if such is not fixed, the prevailing time-rate, by the number of hours in the work-week prescribed under the terms of the worker's employment. Daily earnings in excess of the worker's usual daily average will be considered overtime pay. Payment of the minimum wage is contingent on the worker being available for work each day, performing his work with diligence and skill, fulfilling the conditions of his employment contract, and not having been absent without cause in the preceding six weeks. If the worker's hours in the six weeks were at least 20 per cent in excess of those prescribed for him, one day's absence without cause does not make him ineligible for the guaranteed minimum wage.

67746—2½

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

IN the month of November, three Boards of Conciliation and Investigation submitted their reports in connection with the following disputes.

1. Between the Canadian Marconi Company, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's Marconi Union;

2. Between the Brantford Coach and Body Limited, Brantford, Ont., and employees in its Mohawk Street Plant, members of Local 397, United Automobile Workers of America;

3. Between the Dominion Engineering Works, Limited, Longueuil, P.Q., and its employees, members of the Metal Trades Council of Montreal and Vicinity.

Applications Received

Seventeen applications* for the establishment of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour during the month of November. These were:

1. From employees of George W. Reed and Company, Limited, Montreal, P.Q., members of Local 2735, United Steelworkers of America. The dispute, which concerns union recognition and the negotiation of a collective agreement, was said to directly affect 650 employees. On November 16, Mr. Bernard Rose, K.C., Montreal, was authorized as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

2. From employees of H. E. Mott Company, Limited, Brantford, Ont., members of Local 397, United Automobile Workers of America. The dispute, which was said to affect 70 employees directly, arose out of a request for union recognition and the negotiation of a collective agreement. The application is being held in abeyance pending result of negotiations between the interested parties.

3. From employees of Canada Paper Company, Windsor Mills, P.Q., members of the International Brotherhood of Papermakers and International Brotherhood of Pulp, Sulphite and Paper Mill Workers. The dispute, which concerns the negotiation of a collective agreement, union recognition and upward adjustments of wage rates, was said to directly affect 560 employees. The application, which was returned for revision, had not been resubmitted by the end of the month.

4. From employees of York Knitting Mills Limited (Spinning Division), Toronto, Ont., members of Local 4, Textile Workers Organizing Committee As the cause of the dispute, which was said to directly affect 180 employees, was exclusively connected with the remuneration of the employees involved, the application for the establishment of a Board was rejected on November 7.

5. From certain employees of the Corporation of the City of North Vancouver, Vancouver, B.C., members of the Inland Boatmen's Union of the Pacific. Some 15 men were said to be directly affected by the dispute which concerns the negotiation of a collective agreement and an adjustment of wages.

6. From employees of Canada Packers, Limited, Toronto, Ont., members of Local 114, United Packinghouse Workers of America, and the Toronto Employees' Plant Council. The dispute, which concerns the negotiation of a revised agreement, was said to affect 1,700 employees directly.

7. From employees of Canada Packers, Limited, Toronto, Ont., members of the Toronto Employees' Plant Council and Local 114, United Packinghouse Workers of America. The dispute which, as in the preceding application, concerns the negotiation of a revised agreement, was said to affect 1,700 employees directly.

8. From employees of Canners' Machinery, Limited, Simcoe, Ont., members of the United Automobile Workers of America. Some 60 employees are directly affected by the dispute which concerns union recognition and the negotiation of a collective agreement. On November 17, Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute.

9. From employees of the Consumers' Gas Company of Toronto, Ont., members of Local 12291, District 11, United Gas, Coke and Chemical Workers of America. The dispute, which concerns the negotiation of a closed shop agreement providing for check-off, coverage of office workers and wage adjustments was said to directly affect some 930 employees. On November 17, Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of

* By P.C. 5963, the National and Regional War Labour Boards are specifically charged with the duty of adjudicating wage demands; therefore all applications for the establishment of Boards of Conciliation and Investigation in which wages are the sole cause of the dispute are removed from the ambit of the Industrial Disputes Investigation Act and the applicants are referred to their respective War Labour Boards.

Labour, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner reported on November 27 that he had been unable to effect a mutually satisfactory settlement and recommended the establishment of a Board. On November 30, the Minister of Labour established the Board of Conciliation and Investigation and on the nomination of the employees appointed Mr. Drummond Wren to the Board. The employer was asked to submit the name of a person to act as a member of the Board.

10. From employees of the Point St. Charles plant of the Canadian Car and Foundry Company, Limited, members of the Employees' Association. The dispute, which was said to affect 815 workers directly, concerned the negotiation of an agreement with the Employees' Association, which organization claimed a majority of the employees. On November 23, Mr. Bernard Rose, K.C., Montreal was authorized, as Industrial Disputes Inquiry Commissioner, to investigate the dispute.

11. From employees of the Belair Plant of the Robert Mitchell Company, Limited, Montreal, P.Q., members of the Metal Trades Council of Montreal and Vicinity. The dispute, which affects 2,100 employees directly, concerns union recognition and alleged discrimination because of union membership and activity. On November 20, Mr. Raoul Trepanier, Industrial Relations Officer, Dominion Department of Labour, Montreal, was assigned to investigate the dispute.

12. From employees of Levis Ferry Limited, Quebec, P.Q., members of the Canadian Brotherhood of Railway Employees and Other Transport Workers. The dispute, which concerns the negotiation of a collective agreement, was said to affect 106 employees.

13. From employees of Alberta Clay Products Company, Limited, Medicine Hat, Alta., members of Clay Products Workers Local Union No. 2 (C.C. of L.). The dispute, which concerns union recognition and the payment of a cost-of-living bonus, was said to affect 60 employees. On November 19, the application was returned to the employees for revision.

14. From employees of Genelco, Limited, Peterborough, Ont., members of the United Electrical, Radio and Machine Workers of America. The dispute, which arises out of a request for union recognition and the negotiation of a collective agreement, is said to directly affect 1,200 workers and 500 indirectly. On November 20 the application was returned to the employees for revision.

15. From certain employees of the Johnson Woollen Mills, Limited, Waterville, P.Q. The dispute, which arises out of a request for recognition of the Employees' Group of Johnson Woollen Mills, increased wages, improved working conditions, payment of full cost-of-living bonus, etc., is said to directly affect 86 employees.

16. From the Ford Motor Company of Canada, Limited, Windsor, Ont., in respect of a dispute between the Company and its employees, members of Local 200, United Automobile Workers of America. Some 14,300 were said to be directly affected in the dispute which concerned the demand of the union that 36 salaried female employees according to the Company's statement, "hired to perform purely clerical work, be paid on an hourly rate basis of 75 cents per hour, the rate applicable to male employees employed in stock 7." To enforce their demand the employees had gone on strike November 24, returning to work November 30, following an agreement between the parties to have the status of the 36 female employees determined by Mr. Justice C. P. McTague acting as umpire. On November 30, the Company withdrew its application for the establishment of a Board. A further reference to the strike which took place will be found in the table dealing with strikes and lockouts in Canada during November, printed elsewhere in this issue.

17. From employees of the Massey-Harris Company, Limited, Toronto, Ont., members of Local 2901, United Steelworkers of America. This dispute, which concerns the negotiation of a collective agreement, is said to directly affect 3,000 employees. On November 30, the application was returned to the employees for necessary revision.

Other Boards Established

On November 25, a Board of Conciliation and Investigation was established to deal with a dispute between the London Concrete Machinery Company, Limited, London, Ont., and its employees, members of Local 2740, United Steelworkers of America (LABOUR GAZETTE October, 1942, page 1121). Following the receipt of the application His Honour Judge I. M. Macdonell, Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dispute. The Commissioner was unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a Board. The personnel of the Board is as follows: His Honour Judge James Parker, Toronto, Ont., appointed by the Minister of Labour in the absence of a joint recommendation from the other two members; Mr. J. A. E. Braden, K.C., London, Ont., appointed on the nomina-

tion of the employer; and Prof. G. M. A. Grube, Toronto, Ont., appointed on the nomination of the employees. Concerning the dismissal of two employees of the Company, allegedly for union activity and membership, the Commissioner reported that a tentative arrangement had been made, pending negotiations between the union and the Company respecting a collective agreement, that one man be rehired and the union would not press for the reinstatement of the other. Later, however, negotiations broke down, and both workers found employment elsewhere.

On November 30, a Board of Conciliation and Investigation was established to deal with a dispute between Shawinigan Chemicals, Limited, Shawinigan Falls, P.Q., and its employees, members of Local 357, International Moulders and Foundry Workers' Union of North America (LABOUR GAZETTE, November, 1942, page 1248). On October 26, the dispute was referred to Mr. Bernard Rose, K.C., who, as Industrial Disputes Inquiry Commissioner, was authorized to make an investigation. The Commissioner reported on November 23, that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended the establishment of a Board. On November 30, Mr. Gerald Almond, Montreal, P.Q., was appointed a member of the Board on the nomination of the employees, and the company was asked to submit the name of a person to act as a member of the Board.

Other Boards Fully Constituted

The Board of Conciliation and Investigation established by the Minister of Labour pursuant to Section 65 of the Industrial Disputes Investigation Act to deal with a dispute between Howard Smith Paper Mills, Limited, Beauharnois, P.Q., and its employees (LABOUR GAZETTE, November, 1942, page 1249), was fully constituted during the month of November. The personnel of the Board is as follows: Hon. Mr. Justice Alfred Savard, Quebec Superior Court, Quebec, P.Q., Chairman, appointed on the joint recommendation of the other two members; Mr. C. N. Moisan, Montreal, P.Q., appointed on the nomination of the employer, and Mr. Maximilien Caron, Montreal, P.Q., appointed on the nomination of the employees.

Reference was made in the November issue of the LABOUR GAZETTE, page 1249, to the establishment of a Board of Conciliation and Investigation to deal with a dispute between Ontario Steel Products Company, Limited, Chatham, Ont., and its employees, members of Local 127, United Automobile Workers of America. On November 18, Mr. J. S. McCullagh, Industrial Relations Officer, Dominion Department of Labour, Ottawa, who had been appointed an Industrial Disputes Inquiry Commissioner, reported that he had been unable to effect a mutually satisfactory settlement of the dispute and recommended that the Board already established be authorized to function by naming its personnel. The personnel of the Board is as follows: Honourable Mr. Justice J. G. Gillanders, Supreme Court of Ontario, Toronto, chairman, appointed on the joint recommendation of the other two members; Mr. Drummond Wren, Toronto, Ont., appointed on the nomination of the employees; and Mr. George C. Richards, Windsor, Ont., appointed on the nomination of the employer.

Other Reports of Industrial Disputes Inquiry Commissioners

At the end of the month, a report was received from Mr. Bernard Rose, K.C., Montreal, who had been authorized as an Industrial Disputes Inquiry Commissioner to investigate the dispute between Belding-Corticelli, Limited, Montreal, P.Q., and its employees, members of the International Union of Silk Hosiery Employees (LABOUR GAZETTE, November, 1942, page 1248). The Commissioner found that the war work being done by the employees involved in the application and by the company concerned was not of such a nature and extent to allow the establishment of a board and the interested parties were so advised.

In September, His Honour Judge I. M. Macdonell, Toronto, was appointed an Industrial Disputes Inquiry Commissioner, to investigate a dispute between DeHavilland Aircraft of Canada, Limited, Toronto, and its employees, members of Local 112, United Automobile Workers of America; in connection with which an application for the establishment of a Board of Conciliation and Investigation had been received (LABOUR GAZETTE, October, 1942, page 1123). The Commissioner was also authorized to investigate the dismissal of three of the Company's employees allegedly on account of their union membership and activity. In this latter connection, the Commissioner found that two employees were discharged for insufficient cause and recommended their reinstatement. Insofar as the third employee was concerned, the Commissioner found that his discharge by the company was justified. The reinstatement of the two employees, in accordance with the Commissioner's report, was ordered by the Minister of Labour on November 6. In respect of the application for the establishment of a Board of Conciliation and Investigation the Commissioner recommended that matters should be allowed to stand until March, 1943, when the election of employees' representatives takes place and when the continuation or expiration

of the agreement comes up for decision. The Commissioner further recommended that in March an election be held to decide the bargaining agent desired by the employees. The Commissioner added that: "In the meantime, the company officials are quite prepared to deal with the Union officials as representatives of their own members, so that any question of discrimination or similar matters might be dealt with".

On November 17, Mr. Bernard Rose, K.C., Montreal, who had been authorized to investigate, as Industrial Disputes Inquiry Commissioner, the dispute between Dominion Lime, Limited, Lime Ridge, P.Q., and its employees, members of the National Catholic Union of Dominion Lime employees (LABOUR GAZETTE, September, 1942, page 1003), was requested to investigate the dismissal of certain employees, allegedly for union membership and activity. The Commissioner found in this latter connection, that there was no evidence to substantiate the charge against the company. The report of the Commissioner on the application for the establishment of a Board had not been received at the end of the month.

On November 9, Mr. M. J. Patton, M.A., Toronto, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dismissal of an employee of Outboard, Marine and Manufacturing Company of Canada, Limited, Peterboro, Ont. The Commissioner, in his report submitted November 23, found that the employee in question was discharged for cause.

On October 22, Mr. T. W. Laidlaw, K.C., Winnipeg, was appointed an Industrial Disputes Inquiry Commissioner to investigate the dismissal of certain employees of Leeders' Limited, Winnipeg, Man., following the application for the establishment of a Board of Conciliation and Investigation. (LABOUR GAZETTE, November, 1942, page 1248). On November 24 the Commissioner reported that there was not sufficient evidence to justify a finding that the employees concerned were dismissed for union membership and activity.

Other Application Rejected

In July, an application was received from employees of Halifax Shipyards Limited, Halifax, N.S., members of Local 361, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America, and Lodge 1250, International Association of Machinists, (LABOUR GAZETTE, August, 1942, page 883.) The dispute was referred to Mr. H. R. Pettigrove, Industrial Relations Officer, Dominion Department of Labour, Fredericton, N.B., who was appointed an Industrial Disputes Inquiry Commissioner to make an investigation. The Commissioner found that neither organization represented a majority of the employees in the classifications which they purported to cover, and recommended against the establishment of the Board. The applicants have been advised that a Board will not be established.

Other Settlements Reached

During November, the Department was advised that agreements had been signed by the Canadian Bridge Company Limited, Walkerville, Ont.; The Canadian Steel Corporation, Limited, and their employees, members of Local 195, United Automobile Workers of America (LABOUR GAZETTE, August, 1942, page 890). The agreements between the two companies and the union are summarized in the article entitled "Recent Industrial Agreements and schedules of Wages", appearing elsewhere in this issue.

Following the receipt of the report of a Board of Conciliation and Investigation established to deal with three disputes involving the Granby Consolidated Mining, Smelting and Power Company, Limited, the Princeton Tulameen Coal Company, Limited, and Tulameen Collieries Limited, all of Princeton, B.C., and their respective employees, members of Local 7875, United Mine Workers of America (LABOUR GAZETTE, November, 1942, page 1251), the employees of all three companies rejected the findings of the board and requested the Department to conduct a strike vote in accordance with the terms of Order in Council P.C. 7307. The matter was referred to Mr. F. E. Harrison, Western Representative of the Dominion Department of Labour, and following lengthy negotiations between the parties which he was successful in arranging, an agreement was reached between the company and union in each instance. The agreements provide for the recognition of the union, check off, settlement of grievances, penalties for absence from work, payment for partial shifts worked, classifications, etc.

Other Disputes Referred to Industrial Disputes Inquiry Commissioners

On November 14, pursuant to the provisions of Order in Council P.C. 4020, as amended, Mr. J. S. McCullagh, Industrial Relations Officer, Dominion Department of Labour, Ottawa, was appointed an Industrial Disputes Inquiry Commissioner to investigate a dispute between Hull Iron and Steel Foundries, Limited, Hull, P.Q., and its employees, members of Local 318, International Moulders and Foundry Workers' Union of North America, in con-

nection with which an application had been received in October for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, November, 1942, page 1248). On November 24, the Commissioner recommended that a vote of the employees be taken on the question of which union they desired to have represent them since both the International Moulders Union and the Hull Foundry Workers' Union claimed to represent a majority of the employees. The vote, taken on November 26, resulted in favour of the International Moulders and Foundry Workers' Union.

On November 10, pursuant to P.C. 4020, the Minister of Labour appointed an Industrial Disputes Inquiry Commission to investigate the action of the Taylor Electric Manufacturing Company Limited, London, Ont., in giving notices of separation to certain employees allegedly for union membership and activity in and on behalf of the United Electrical, Radio and Machine Workers of America. The personnel of the Commission is as follows: His Honour Judge I. M. Macdonell, Toronto, Ont., chairman; Mr. J. A. E. Braden, K.C., and Prof. Christian Sivertz, both of London, Ont., members.

Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, Ont., was appointed on November 16, an Industrial Disputes Inquiry Commissioner, to investigate a dispute between Searle Terminal, Limited, Fort William, Ont., and its employees, members of Lodge 650, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in connection with which an application had been received in October for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, November, 1942, page 1249).

On November 20, Mr. Raoul Trepanier, Industrial Relations Officer, Dominion Department of Labour, Montreal, P.Q., was appointed on Industrial Disputes Inquiry Commissioner to investigate a dispute between The Albert Rakovsky Precision Works, Limited, Montreal, P.Q., and the Metal Trades Council of Montreal and Vicinity. The dispute arises out of the company having given certain notices of separation allegedly for union membership and activity.

Disputes Referred to Industrial Relations Officers

On November 11, Mr. Raoul Trepanier, Industrial Relations Officer, Dominion Department of Labour, Montreal, P.Q., was instructed to investigate the dispute between the Robert Mitchell Company, Limited, Ville St. Laurent, P.Q., and its employees, members of the United Steelworkers of America, in connection with which an application for the establishment of a Board of Conciliation and Investigation was received in October (LABOUR GAZETTE, November, 1942, page 1249).

Applications Withdrawn

On November 13, on the request of the applicant employees, the application for the establishment of a Board of Conciliation and Investigation (LABOUR GAZETTE, March, 1942, page 261) to deal with a dispute between the Security Storage Company, Limited, Winnipeg, Man., and its employees, members of Division 205, Canadian Brotherhood of Railway Employees and Other Transport Workers, was withdrawn.

The application for the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Plessisville Foundry, Plessisville, P.Q., and its employees, members of the Catholic Union of Foundry Workers of Plessisville (LABOUR GAZETTE, July, 1942, page 761) was withdrawn by the applicants on November 4.

On November 6, the Department was advised that an agreement had been reached between the management and employees of Regina Industries, Limited, Regina, Sask., and that the application for a Board of Conciliation and Investigation (LABOUR GAZETTE, August, 1942, page 884) submitted on behalf of the employees was accordingly withdrawn.

The application for the establishment of a Board of Conciliation and Investigation in a dispute between Montreal Tramways Company, Montreal, P.Q., and employees, members of Local 790, Amalgamated Association of Street Electric Railway and Motor Coach employees of America, and the National Catholic Union of Street Railway Employees (Bus Drivers Section) (LABOUR GAZETTE, November, 1942, page 1248) was withdrawn on November 26.

Report of Board in Dispute between Canadian Marconi Company, Montreal, P.Q., and Its Employees

On November 24, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Marconi Company, Montreal, P.Q., and its employees, members of the Montreal Metal Trades Council's Marconi Union (LABOUR GAZETTE, October, 1942, page 1121).

The personnel of the board was as follows: Dr. Gaspard Fauteux, M.P., Montreal, P.Q., chairman, appointed by the Minister of Labour in the absence of a joint recommen-

dation from the other two members, Mr. Drummond Wren, Toronto, Ont., appointed on the nomination of the employees and Mr. Walter A. Merrill, K.C., Montreal, P.Q., appointed on behalf of the employer.

The report of the board is signed by the chairman and Mr. Wren. A minority report was presented by Mr. Merrill.

Report of Board

To the Honourable Humphrey Mitchell, P.C., M.P.,
Minister of Labour,
Ottawa, Ontario.

In re Canadian Marconi Company, Employer; and Metal Trades Council's Marconi Union, Employees.

Sir,—

The Board of Conciliation and Investigation, established in the above matter, has the honour to report that it met at the Windsor Hotel, Montreal, P.Q., on the 28th and 29th days of October, and on the 3rd, 4th, 9th and 24th days of November, 1942.

At the hearings, the Company was represented by Mr. R. A. Brophy, General Manager; Mr. S. M. Finlayson, Deputy General Manager; Mr. James Fergus, Secretary. The Metal Trades Council's Marconi Union was represented by Mr. Laurent Lecavalier, President; Mr. Jean Jacques Rouleau, Secretary; Mr. William Michaels, Organizer.

At the first session of the board, the agenda was:

(1) Purpose of the Board.
(2) Obtain names of the three representatives for the Union and for the Company.
(3) Possibility of parties arriving at an amicable settlement without Board procedure.
(4) Union presentation of case.
(5) Reply of employer.

During the sessions above mentioned, the matters to be inquired into were those specified in the "Form of Application for Establishment of a Board of Conciliation and Investigation," dated the 31st July, 1942, and the Marconi Company's answer, dated the 14th August, 1942, both of which had been filed with the Registrar at Ottawa .

At the outset it was established that the matter referred to in these two documents resolved themselves into the following five main subjects to be dealt with in the following order:—

1. The Marconi Company refused to meet the negotiating committee of the Union to discuss a proposed contract;

2. There had been, and there still existed, discrimination by the Marconi Company against certain members of the Union specifically named;

3. There was pressure brought to bear by the Company on the employees in favour of the Marconi Employees' Council at the time of its organization and against the Union at the time of its organization;

4. The validity of the contract dated the 18th July, 1942, entered into between the Marconi Company and the Marconi Employees' Council.

5. Union recognition.

After these five sessions of the Board, where all the different questions above mentioned were fully inquired into and during which many witnesses were heard, at the demand of both parties, employers and employees, we may say that the dispute centred around these three main questions:—

1. Which organization represents the majority of employees in the plant,—the Marconi Employees' Council or the Metal Trades Council's Marconi Union.

2. Union recognition.

3. The validity of the contract dated the 18th July, 1942, entered into between the Marconi Company and the Marconi Employees' Council.

The Metal Trades Council's Marconi Union insist on Union recognition, believing they represent the majority of employees in the plant. The employer insists upon the validity of the contract and believes it should remain in full force and effect until the 27th July, 1943.

In order to clarify the issues in dispute, the Conciliation Board appointed to investigate this matter has decided to submit the following recommendations:

1. That a vote of the hourly-paid employees in the Marconi plant should be taken under the direction of the Department of Labour. This vote is in our opinion necessary to determine the wish of the employees, whether they want to belong to the Marconi Employees' Council or to the Metal Trades Council's Marconi Union. If the result of the ballot is in favour of the Marconi Employees' Council, the "status quo" should be maintained.

2. If the ballot is in favour of the Metal Trades Council's Marconi Union, this organization should be recognized as the bargaining agent in the plant and the Marconi Employees' Council should be substituted by the Metal Trades Council's Marconi Union as party to the contract with the understanding that the contract already entered into between the Marconi Company and the Marconi Employees' Council, dated the 18th July, 1942, should be respected until its expiration, with the sole exception that members of the Metal Trades Council's Marconi Union should replace on the Grievances Committee, members of the Marconi Employees' Council.

3. In order to serve the best interests of the war effort, industry and labour, both parties should agree that at the expiration of the contract, its renewal or the one redrafted should be valid for the duration of the war.

Respectfully submitted,

(Sgd.) Gaspard Fauteux,
Chairman

(Sgd.) Drummond Wren,
Member

Dated in Montreal, P.Q., the 24th day of November, 1942.

Minority Report

To the Minister of Labour, Department of Labour, Ottawa, Ontario.

In Re: Metal Trades Council's Marconi Union, Employees: and Canadian Marconi Company, Employer:

The matter in controversy came up for hearing before the reconstituted conciliation board, consisting of Dr. Gaspard Fauteux, as Chairman, Mr. Drummond Wren, employees' representative, and Mr. Walter A. Merrill, K.C., appointed by the Department of Labour as representative of the Canadian Marconi Company, following the resignation of its representative, Senator Eli Beauregarde, K.C.

The hearings commenced on the 28th October, 1942, the last hearing taking place on the 9th November, 1942.

The matters to be inquired into were those specified in the "Form of Application for Establishment of a Board of Conciliation and Investigation", dated the 31st July, 1942, and the Marconi Company's answer, dated the 14th August, 1942, both of which had been filed with the Registrar at Ottawa.

At the outset it was established that the matters referred to in these two documents resolved themselves into the following four main subjects to be dealt with in the following order:—

1. The Marconi Company refused to meet the negotiating committee of the Union to discuss a proposed contract;
2. There had been, and there still existed, discrimination by the Marconi Company against certain members of the Union specifically named:
3. There was pressure brought to bear by the Company on the employees in favour of the Marconi Employees' Council at the time of its organization and against the Union at the time of its organization;
4. The validity of the contract dated the 18th July, 1942, entered into between the Marconi Company and the Marconi Employees' Council.

For brevity the Metals Trades Council's Marconi Union is referred to as the Union, and the Marconi Employees' Council, as the Council.

I

The Marconi Company refused to meet the negotiating committee of the Union to discuss a proposed contract.

The company admitted that it had refused to negotiate with the Union Negotiating Committee representative for a contract with the Union, and gave as reason that inasmuch as a company council had been formed, and was functioning satisfactorily, the company was not free to negotiate with a third party.

The conclusion to be drawn on this phase of the inquiry is that the company's attitude was a proper, fair and reasonable one, assuming that the formation of the Council was effected in a fair and reasonable manner, which is a matter to be later discussed and dealt with.

II

There had been, and there still existed, discrimination by the Company against certain members of the Union specifically named.

Much time was devoted to hearing evidence on both sides on alleged discrimination against employees Douglas McGonnigal, Bill Michaels, Jacques Rouleau, Clayton Grabstein and Leo-Paul Paquette.

Out of the mass of evidence which proved to be highly contradictory, the following conclusions appear to be justified:—

A. Douglas McGonnigal—he was in the employ of the company five months, and while it was stated that he was laid off owing to a reduction in personnel, he probably would have been retained had it not been that he was active in union organization, and his being laid off would not appear to have been justified;

B. Bill Michaels—had only been employed 2½ months and his being laid off for failure to pass a required test was justified;

C. Jacques Rouleau—still in the employ of the Company and President of the Union. His transfer to another department although stated by his superiors to have been routine, was probably a disciplinary measure as a result of an altercation he had in the cafeteria with assistant factory superintendent, John Campbell. The attitude he adopted on that occasion, and his actions as evidenced by Miss Trahan, a witness produced on his behalf, jusitfy his temporary removal to another department:

D. Clayton Grabstein—his dismissal was for cause which was amply proven and was fully justified;

E. Leo-Paul Paquette—his transfer from the mechanical assembly department to bench work, which resulted in a net reduction of payment, has not been proven by the company to have been justified, and would appear to have been directly connected with the fact that he was active in soliciting membership in the union. He should be reinstated in his former position.

III

There was pressure brought to bear by the company on the employees in favour of the Marconi Employees' Council at the time of its organization, and against the Union at the time of its organization.

The Union has failed to substantiate its charge that pressure was brought to bear on the employees of the company at the time of the organization of the Council.

On the contrary, the evidence disclosed, and was not contradicted by the Union, that the Council plan, which had been studied for at least a year and a half by the company officials, was laid before the employees, who were left entirely free to accept it or not, and who, on a ballot being taken, a majority of those voting voted in favour of the Council.

There was nothing laid before the Board to demonstrate that the balloting was in any way improper, and was not a secret ballot, and the conclusion to be arrived at is that the company refuted any charges of pressure in order to induce its employees to vote in favour of the Council.

Unfortunately, as much cannot be said for the methods employed by the Union in order to solicit membership and opposition to the Council.

Exhibit T, which is a file of bulletins issued by the Union, speaks for itself, and undoubtedly, had the Company used similar methods to promote membership in the Council as were used

by the Union to promote membership in the Union and opposition to the Council, there would be just cause for complaint. It should be pointed out that notwithstanding the Chairman's repeated injunction to all those present at the hearings that while the Board was sitting and until its final decision nothing should be done by either party to disturb the status quo, on at least two occasions the Union published and distributed pamphlets to the employees making references to the deliberations of the Board, and directly contrary to the undertaking which had been given. The conclusion to be drawn from this phase of the inquiry is that the Union has failed to substantiate its charges against the company, that it used pressure on the employees to join the Council.

IV

The validity of the contract dated the 18th July, 1942, entered into between the Marconi Company and the Marconi Employees' Council.

Although this phase of the inquiry is dealt with last, it would appear to be by far the most important matter to be dealt with, and on its solution would appear to hinge the decision and recommendations which would have any effective result.

From the very beginning, as already stated in the first part of this document, the Company took the position that as long as the Council was in existence and the contract entered into between the Company and the Council, dated the 18th July, 1942, was in effect and subsisting, the Company was precluded from negotiating with any other organization.

The Union, on the other hand took the position that what the Company termed to be a contract was in fact not a contract and that neither the Company nor the Council were bound by it because it was stated that this was not what was termed a 'democratic' contract.

Evidence to this effect was given by Mr. Robert Haddow, described as Organizer and Business Representative for the Machinists' Union, who stated that the only kind of labour contract he would consider a binding labour contract would be one in which the members would have a democratic say in what the contract should be, his objection to the contract in force between the Company and the Council being that the members were not, at any time, consulted upon the terms of the contract in any democratic way at all.

It has already been stated that the Union failed to substantiate its charges, that the election of the employees to the Company's Council was not a free election on a secret ballot, and it must therefore be assumed that those employees who were elected by their fellow employees on that ballot were authorized to represent the employees on the Council.

It came out in evidence that Roger Campeau, the representative of the employees on the Council, who actually signed the contract of the 18th July, 1942, on behalf of the employees, was, at the very time that he signed as a member of the Council, also a member of the Union, and that at the time the constitution of the Council and the contract were being discussed and drafted, there was at least one other member of the Union, who was also an employees' representative, on the Council. It is further to be noted that as the result of the contract which was entered into which was filed both with the Regional Board and with the Labour Board at Ottawa, the employees of the Marconi Company benefited by the scale of wages set forth in the contract, have accepted the increased scale of wages provided in the contract and have benefited thereby, so that all the employees of the company, both those belonging to the Council and those belonging to the Union, have, to say the least, acquiesced in the contract existing to the extent of accepting and pocketing the benefits accruing as the result of the contract.

The question was put several times both to Mr. Haddow, and to other representatives of the Union, what they would think of a Company which threw aside a contract entered into after negotiations with the Metal Trades' Council where subsequently a rival union succeeded in weaning away from the Metal Trades' Council sufficient numbers of members to give the rival union a majority in the plant, while the contract with the Metals Trades Union was still in existence, to which no satisfactory answer was ever received.

It is suggested that it is exactly this which the Union is demanding of the Company, and that until it is established beyond the shadow of a doubt that the existing contract is invalid, the position which the Company has taken throughout that it stands on its contract is the proper one.

There is nothing in Order in Council No. 2685 which precludes or declares to be illegal a Company Council such as has been organized in the Marconi Company.

On the contrary, as pointed out by the witness Lionel Forsythe, K.C., Paragraph 7 of Order in Council No. 2685, as well as the preamble to the Order in Council, contemplates such organizations.

Nothing was laid before the Board which would entitle the Board to conclude that the contract entered into between the Company and the Council, dated the 18th July, 1942, is invalid, and not a subsisting contract, and that it will not remain in full force and effect until the 27th July, 1943.

The suggestion of the Union that a vote be taken now in the plant to establish its assertion that sixty per cent of the employees are members of the Union would appear at this time to be futile, as even if such were the case and the representative of the Union approached the Company for the purpose of negotiating a new contract, the Company would, it is assumed, take the same position as it is taking now and refuse to negotiate with the Union for the same reasons as it has heretofore refused, namely, that it cannot negotiate a new contract while the present contract is in force.

It might even be said that if the Company were to take such a course, it would not be keeping faith with those of its employees who voted in favour of the Council at a time when the majority of those who voted were in favour of such a step. It is therefore, recommended that at least until the 27th July, 1943, the earliest date at which the contract can be brought to an end, no steps be taken by either party to disturb the conditions presently existing in the Marconi Company as between the Company and its employees, otherwise contracts entered into between employers and employees through their representatives, would be valueless as being subject to cancellation practically at any time with the resultant disturbance to industry in general and the hampering of the war effort.

It is respectfully submitted that the recommendations of the majority of the Board of Conciliation that a vote now be taken under the direction of the Department of Labour, and that if the ballot is in favour of the Metal Trades Council's Marconi Union, this organization should be recognized as the bargaining agent in the plant, and the Marconi Employees' Council should be substituted by the Metal Trades Council's Marconi Union as party to the contract, and that members of the Metal Trades Council's Marconi Union should replace on the grievances committee, members of the Marconi Employees' Council, would be tantamount to destroying the Constitution of the Marconi Employees' Council under the authority of which the agreement of the 18th July, 1942, was entered into between the contracting parties, and would be attempting to accomplish by indirect methods the substitution of the Metal Trades Council's Marconi Union for the Marconi Employees' Council between now and the 18th July, 1943, the earliest date at which the existing contract could be terminated.

Montreal, 24th November, 1942.

The whole respectfully submitted:

(Sgd.) WALTER A. MERRILL,
Member of Board

Report of Board in Dispute Between Brantford Coach and Body, Limited, Brantford, Ont., and Its Employees

During the month, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with a dispute between the Brantford Coach and Body, Limited, Brantford, Ont., and its employees, members of Local 397, United Automobile Workers of America. (LABOUR GAZETTE, September, 1942, page 1005.)

The personnel of the Board was as follows: Honourable Mr. Justice J. G. Gillanders, of the Supreme Court of Ontario, chairman, appointed on the joint recommendation of the other two members; Mr. Drummond Wren, appointed on the nomination of the employees; and Mr. V. A. Sinclair, K.C., appointed on the nomination of the employer. All three reside in Toronto.

The report of the board is signed by the chairman and Mr. V. A. Sinclair; Mr. Drummond Wren submitted a minority report. The texts of the report of the board and the minority report follow:

Report of Board

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Brantford Coach and Body Limited, Employer, and Employees in its Mohawk Street Plant, Members of Local 397 United Automobile Workers of America, Employees.

The Board of Conciliation and Investigation appointed in this matter have held sittings in Toronto and Brantford. At the sitting in Brantford both the applicant Union and the Company were ably represented, made their submissions, and fully discussed the matter of the dispute.

The applicant Union was represented by Robert Stacey, International Representative of the U.A.W.A., Alec Blancher, Chairman of the Employees of the Union Committee, and Joseph Thompson, an employee and a signatory of the application for the establishment of the Board. The Company was represented by J. E. Ruby, President, and G. H. Gustafson, General Manager.

At the Brantford sitting, where both parties were heard orally, the applicant Union filed a brief in writing outlining its claims and submissions, and on arrangement the Company subsequently reduced its submissions to writing and furnished certain information desired by the Board, all of which was made available to the Union. Finally, the Union submitted in writing its reply and further material desired by the Board.

The question at issue is whether or not the applicant Union should now under the existing circumstances be recognized as the bargaining agent through which the Company should now negotiate an agreement with its hourly-rated employees in the Company's Mohawk Street Plant in the City of Brantford.

No question arises in respect of the right of the employees to organize into collective associations or trade unions, and through such bodies to bargain collectively with their employers as to the terms and conditions of their employment. This principle is conceded by the Company and, in fact, is too well established in law, industrial practice, and public policy, to need any comment at this time.

The question is, rather, whether or not the applicant Union should at this time be recognized as the bargaining agent on behalf of the employees mentioned, with which the Company should now negotiate an agreement in the place of and to supersede a collective association of the employees in question represented by an Industrial Council now in existence.

Under the circumstances it is necessary in weighing the submissions of the parties to the dispute to have a clear understanding of the relevant facts in chronological order.

The Company operates two industrial plants in the City of Brantford, one not concerned in this dispute called the Pearl Street Plant, and the other with which this dispute is concerned, called the Mohawk Street Plant.

In June, 1941, after some organizing had been done by the Union among the Company's employees, the question was raised as to which of the two organizations should be recognized by the Company in negotiating with its employees; a trade union or an industrial council elected by and from the Company's employees. In June, 1941, a vote was taken in both plants to determine which organization the employees desired to represent them in negotiating with the Company. The procedure adopted on the taking of this vote was outlined to the Board in some detail, and it is conceded that the vote was fairly and properly conducted. Oddly enough, in the Pearl Street Plant, the employees voted approximately 80 per cent in favour of negotiating through the applicant Union, while in the Mohawk Street Plant with which this dispute is concerned, the result of the vote was approximately 80 per cent in favour of negotiating through the Industrial Council. As a result of this vote an agreement was negotiated dated August 20, 1941, between the Company and the employees of its Pearl Street Plant represented by Local Union No. 397. In the Mohawk Street Plant, where the employees had voted in favour of being represented by the Industrial Council, an election of officers of the Industrial Council was held. After the election this Council represented the employees and during the following year on motion of both the Council and the Company, it is said various amendments were made in the existing conditions for the benefit of the employees. The Union continued the organization of the Company's employees, and before the elections for the Industrial Council in June, 1942, orally suggested that the Union should be recognized as the bargaining agent on behalf of the employees of the Mohawk Street Plant, or that a vote be taken to show whether or not the employees at that plant desired to negotiate through the Union.

On May 27, 1942, nominations were held for officers of the Industrial Council, and on June 2 an election for officers of the Council was held. Prior to the election, instructions were issued by the Union to its members asking all Union members to refuse to stand as candidates for the Council, and on voting to simply mark their ballots "U.A.W.—C.I.O." The result of this election is of some interest.

There were 296 employees in the plant entitled to vote. In five departments comprising 168 employees the candidates were elected by acclamation without protest. In one department comprising 4 employees there was no nomination and no ballot. In seven departments comprising 124 employees, apparently all these employees voted, 90 votes being cast for candidates; three ballots were blank, and 31 declared spoiled being marked as instructed by the Union "U.A.W.—C.I.O." or letters to that effect. After this election, by letter dated June 10, 1942, the Union formally requested the Company to negotiate with the employees of the plant in question who were members of the Union to conclude a collective agreement and, in the alternative, if any doubt existed, that a vote be taken to determine whether or not the Union represented a majority of such employees. The Company felt bound to recognize the industrial council and took no action to facilitate this request. Subsequently application was made by the Union for appointment of this Board.

Notwithstanding the instructions by the Union to its members not to stand for election as members of the industrial council, Mr. Stacey frankly stated to the Board that, desiring to make sure of Union representation on the Industrial Council should it continue in existence as the organization representing the employees, the Union did approve and arrange for certain of its members to stand for election, and, in fact, some of these were elected and are members of the current industrial council, although it is said that in the five departments where acclamations took place the majority of the nominees were Union men who refused to stand for election. At least two Union men stood as candidates and were elected as members of the Council.

There is no formal agreement signed by the parties in existence between the Company and its employees as represented by the industrial council, but there is in writing what is called a Constitution, which is amended and promulgated from time to time by the Company and the council. Copies of this are posted publicly in a number of places in the Plant and it is recognized as the arrangement between the Company and its employees. It is so recognized by the Company in its letter to the Registrar of the Department of Labour dated July 7, 1942, in response to the application to constitute this Board.

This Constitution, so-called, makes provision (inter alia) not only for the constitution and election of the council, but also for hiring and dismissal, for seniority rights, for grievances procedure, for hours of work, holidays, etc. It is said that it was considerably amended after the agreement was negotiated between the Company and the Union respecting the Pearl Street Plant to bring it

in line with the agreement completed between the Company and the Union in respect of that plant. Union representatives claim that the industrial council is favoured by the employers, and that the council has been able to accomplish little benefit for the employees. On the other hand, we are referred to various benefits which have been brought into effect during its existence.

On June 26, 1942, the date of the application for this Board, there were 325 employees in the plant in question who would be eligible for Union membership. At that time it is said that of this number some 199 were Union members. At the time of hearing, the Union membership was said to be approximately 254. Union representatives tendered to the Board for inspection 254 completed Union cards said to be membership cards of the employees of this Plant and representing members in good standing. This does not necessarily indicate the payment of initiation fees and monthly dues. Union representatives stated that it is the custom in organizing plants to waive the Union initiation fee of $3 and the monthly fee of $1 per month. An inspection of these cards reveals that they are dated on various dates from May 13, 1942, to August, 1942. Over the signature of the employee, the card contains (inter alia) the following provision:

> I hereby designate, select and empower the International Union, United Automobile, Aircraft, & Agricultural Implement Workers of America (UAW-CIO), as my representative for the purpose of collective bargaining in respect to rates of pay, wages, hours of employment and other conditions of employment; and I hereby revoke every selection or designation which in any manner may heretofore have been made by me, or any other representative for any of such purposes.

This evidence would indicate that as of this date a substantial majority of the Company's employees are in favour of being represented in their negotiations with the Company by the applicant Union.

The result of the election for the industrial council held on June 2, 1942, is of importance. There was no protest with respect to the election of the officers elected by acclamation and in the seven departments comprising 124 employees, it is of no little significance that 90 employees cast valid ballots for the election of candidates, and that only 31 ballots could be interpreted as a protest against the Industrial Council being elected as representative of the employees. It is also frankly conceded by Union representatives that a number of their members did take part in the election, some to stand as candidates, and many to cast ballots for the election of members.

From the facts stated it must be concluded that the employees of the plant, including a considerable number of employees members of the Union, joined in the election held in June, 1942, of the industrial council with the approval of the Union. By permitting some of its members to stand as candidates the Union hoped to get control of or at least have a voice in the employees' organization through the medium of this Council. It is recognized both by the Company and the employees that this Council is elected for a term of 12 months. Having enjoyed certain benefits obtained through this Committee and joined in the re-election of this Council for a further period of 12 months, it would seem only fair and reasonable that the employees and the applicant Union should be bound by the choice so made, at least for the currency of the present council. It is recognized by both the Company and the employees that the election of the council constitutes not only a negotiating body on behalf of the employees for a period of 12 months, but also the adoption and ratification of the current conditions set out in the Constitution and posted in the plant. The practical effect of what has been done, is an agreement with the employees through the industrial council for a period of 12 months from June 2, 1942, on the terms and basis of the Constitution so posted. It would be improper for the Company to deny the existence of this agreement or to seek to escape any of the benefits for employees provided by the Constitution. Likewise, the employees should be bound for the recognized term of the agreement in the same manner as the Company.

Although criticism might be made from a legal standpoint, under the circumstances the completion of such an arrangement should be recognized as having some stability by both parties. It may be the hope of certain employees, having obtained certain benefits through the industrial council, that by having the Union now act as their negotiating agent further benefits can be obtained. There seems no doubt that at the present time the applicant Union represents a substantial majority of the hourly-rated employees of the plant in question. If the situation is similar when the present agreement expires, that will be a matter to consider at that time, but at the present time, and during the period for which the present industrial council was elected the industrial council should be recognized by both the Company and the employees as the organization representing the employees. In the circumstances we would express the hope that the applicant Union would not press its present claim until, or unless, the employees

whom it represents are unfettered by a current and existing arrangement with the Company.

All of which is respectfully submitted.

Dated at Toronto, this 9th day of November A.D. 1942.

(Sgd.) J. C. Gillanders,
Chairman

(Sgd.) V. A. Sinclair,
Member

Minority Report

The Honourable Humphrey Mitchell,
Minister of Labour,
Ottawa, Ontario.

In the matter of the Industrial Disputes Investigation Act and of a dispute between Brantford Coach and Body Limited, Employer, and Employees in its Mohawk Street Plant, Members of Local 397 United Automobile Workers of America, Employees.

The Board of Conciliation and Investigation appointed by you to enquire into the dispute between the above named parties has made its investigation. Finding myself entirely at variance with the conclusions of my colleagues on the Board, I now have the honour herein to present my report.

The question at issue is whether or not the applicant Union should be recognized as the bargaining agent with which the Company should negotiate and conclude a collective agreement with respect to its Mohawk Street Plant in the city of Brantford.

In order to clearly understand the problem in this dispute, I find it necessary to relate the events leading up to it and to thoroughly examine the vote for the election of plant council representatives, as well as the circumstances surrounding the adoption of the alleged "Contract." The dispute must, however, be considered with respect to the activities of the Union in the Company's Pearl Street Plant in order to arrive at a proper conclusion as to whether or not the Company in its Mohawk Street Plant has succeeded through the employment of devious means to have established a Council supposedly representative of the employees therein, for the purpose of depriving the employees of their right to union recognition.

Events Leading up to Dispute

In 1937 the United Automobile Workers of America, at the request of some of the employees, placed their services at the disposal of the employees in both of the Brantford Coach and Body plants in Brantford. Some of the employees became members but as the Union was at that time engaged in the organization of several large automobile plants in Ontario, little attention was given to the Brantford situation and it was an easy matter for the Company to persuade their employees in the Pearl Street plant to form themselves into an isolated company union, called the Brantford Coach and Body Builders Association, it having been related by their employers that their affiliation with the C.I.O. at that time was detrimental to that business. Labour generally in Canada had been suffering for a period of at least seven years from unemployment, short time and, worse still, from fear of these. Together with the inability of the Union at that time to give them the attention and guidance they required, it was natural that the employees could be persuaded to discontinue their Union affiliation. The result was that the Union rescinded the charter of the Brantford Local on the formation of the company union.

In 1941, however, the officers of the company union had had ample opportunity to learn how ineffective and impotent such an employees' organization could be. Early that year it decided to become a proper trade union but was undecided as to which organization it should affiliate with. A meeting of the employees was then held. By a large majority their committee was instructed to seek reaffiliation with the U.A.W.-C.I.O. and their charter was returned to them by the Union and the local re-established.

The Union then approached the Company for purposes of collective bargaining. Up until this time union organization had only taken place in the Pearl Street Plant, the Union not being active in the Mohawk Street Plant.

Vote in Pearl Street Plant Result of Union Request

In response to the Union's request for negotiations in the Pearl Street Plant, the Company decided to take a vote among its employees when by ballot they were asked to state whether they wished to be represented by an industrial council or an "outside union." The Union has no complaint about the voting procedure. I submit however that the term "outside union" was a deterring one as it is vague and misleading when a specific union, the U.A.W., was the one requesting bargaining rights. The result of the ballot, nevertheless, was 80 per cent in favour of the Union.

As a result of the ballot, negotiations were entered into between the Company and the U.A.W. Local, resulting in an agreement being completed and signed by these two parties on the 21st day of August, 1941. It should be noted that the vote was taken in June, 1941, and the agreement completed and signed in August. At least two months were, quite

properly, necessary to arrive at final conclusions.

Vote in Mohawk Street Plant Company Initiated

However, at the same time as the vote was taken in the Pearl Street Plant, the Company on its own initiative also took a similar vote in the Mohawk Street Plant, the one we are now concerned with. This was an astute move on the part of the Company, as the Union had not requested collective bargaining in that plant. It was therefore a very obvious strategy to forestal union activity and in countries where unfair labour practices are properly defined and penalized such strategy is unlawful.

This "unfair labour practice" resulted, as was a foregone conclusion, in 80 per cent of the votes favouring the company union or industrial council. A council was elected, representative of the various departments. A "constitution of Industrial Council of Mohawk Street Plant of Brantford Coach and Body Limited" was later posted in the plant. It contained 13 clauses and in none of them nor in its title is there any indication that this document constitutes a contract between the Company and the council (company union). It is, as it simply states in its title, a constitution of the plant council to which in no part of it is the Company committed, nor has it signed to agree, to the provisions therein. There was not, therefore, at the time of the inception of the council or company union any "contract" entered into between the Company and the council.

Union Membership Increases in Mohawk Street Plant

Having completed its negotiations with the Company in the Pearl Street Plant resulting in a proper agreement being entered into and concluded by the Union and the Company, some attention could be given to the increasing demand for union membership and representation on the part of the employees in the Mohawk Street Plant. During the year, this membership increased until at the date of the application on June 27 for this Board, it numbered 199. When the Board held its sitting in Brantford, evidence was submitted determining that at that time the Union membership had increased to 254. The cards do show that many joined between May 13, 1942, and August, 1942. This should be considered in connection with the date set for nominations to office of the plant council members which took place on May 27 as additional evidence of protest from the employees on behalf of proper union representation. Further evidence I adduce from the result of the nomination proceedings and the balloting for candidates.

Union Advises against Strikes

I cannot in any manner agree that a vote for officers or representatives to a plant council can, by any stretch of the imagination, be considered as a vote determining what agency the employees desired to represent them. Our workers are not astute politicians wary of abstract implications but are honest hard working men unaware of what construction or misconstruction can and might be placed on their honest actions. It is claimed that "there was no protest with respect to the election of the officers elected by acclamation in the seven departments comprising 124 employees." They could have struck the plant to give ample evidence to their protest against the vote that was to take place, but the Union had already on or about May 9 induced them to return to work when a strike was in progress. In an earlier strike those employees who were active sponsors of proper union representations had previously induced the workers to return to their jobs. It was contrary to their determined policy of no strike on war production to countenance any such measures. What sort of protest was required of them? Is the Company anxious for a strike or for the heat for strike action to be generated, as they also protested at the Board that a strike vote had not been taken when this Board was applied for? The Union, however, has advised its members against such action during the war so it protested in every other legal means in its power. From the following examination of the vote for the industrial council we will see that this protest is an obvious and determined one.

Nominations Results for Industrial Council

In five departments, comprising 168 employees eligible to vote, the candidates were returned by acclamation but not "without protest" as is most evident from the nomination proceeding. In this procedure, every employee eligible to vote or nominate obtains a ballot on which he writes and deposits the name of his nominee.

In the Dump Body Department three employees received nominations. One of these nominees was a union member and he received a *plurality* of the votes cast. One of the remaining two nominees had been the Council representative the previous year and receiving the least votes of the three, he refused to stand as he considered the vote as evidence of lack of confidence in the Council. The remaining nominee was elected by acclamation. There are approximately *30 employees in this Department.*

In the Wood Department there were 15 employees eligible to vote. A union man received the majority but declined to stand for election. There was also an acclamation in this department.

In the U.K. line, two were to be elected as there are more than *50 employees in this department.* Two union men received the greatest and the second greatest number of the nomination votes. They declined to stand and the two others receiving a minority vote were elected by acclamation.

In the Research Department there are approximately *50 employees.* The Secretary of the Council for the past year received a substantial majority but declined to stand owing to the impotence of the Council. The other nominee who had received a small minority of the vote was therefore elected by acclamation.

Election Results in Seven Departments

In the seven departments where *a vote was taken for election,* the results are also interesting and substantiate the Union's "protest" and its majority.

In the Yard Department two union men received 16 votes. In the Shipping Department, the union man received 18 votes and in the Wood Department, the union member received 5 votes. In the three departments where union members did not stand for election, they were elected in two of them and lost the third by only 2 votes. Of the total of 124 votes cast for representatives in these three departments alone union members received 39 votes. Add to these 39 the 31 ballots marked U.A.W.-C.I.O. and we find a total of 70 for the Union, which must be considered a minimum for the Union because in the four other departments there is no way of determining Union strength. This 70 represents a substantial vote for the Union even in those seven departments where the vote was taken.

Overwhelming Vote Favours Union Representation

Considering the results of the vote with the results of the nominations where Union nominees received such an overwhelming majority of the votes but declined to stand for election to a plant council, I am forced to come to the conclusion that the Company was very anxious to establish a shadow organization to frustrate the employees' demands for union representation and recognition. As those employees who had not more than two months' service with the Company were not permitted to vote, and as the vast majority of them are union members, the choice of the Union by the employees is very evident.

Union Approached Company before Vote Taken

I say the Company was anxious to get a shadow Council re-elected because for some time prior to nominations, the Union had advised the Company that it represented the majority of the employees in the Mohawk Street Plant and desired to enter into collective bargaining with a view to concluding a collective agreement. A shop Committee conveyed their requests to the Company for a vote to be again taken either under the supervision of the Department of Labour or as it had been taken the year before. In reply to that request the Committee was invited to meet the management when the Manager, the Director of Personnel and the President, Mr. J. E. Ruby, were present. At that meeting, Mr. Ruby stated emphatically that he would have nothing to do with the C.I.O., that he would recognize the Industrial Council and nobody else. The Committee then had to exert every effort to dissuade the employees from striking. The International Representative of the Union had submitted similar verbal requests on various occasions and in writing on May 20 to which the Company in its statement declared that "no reply was made". This all took place prior to the nomination and elections pertaining to the plant council. The Union addressed further communications to the Company immediately following the vote.

Company Agreed on Vote Subject to Directors' Approval of Results

The Company ignored the Union's "protests" and requests for a means to determine the Collective Bargaining Agency and proceeded to hold the nominations and elections with the *results above noted.* However the company did, on June 26, agree to a vote being taken in the plant to determine the bargaining agent but when the arrangements for the votes were under way, the management declared that should the vote favour the Union, the matter would only be referred to the Board of Directors for their decision as to whether the Union should or should not be recognized. Under these circumstances the Provincial Department of Labour withdrew as it could not justify the time and cost involved.

The Constitution or "Contract"

An equally important factor in this dispute is the nature of the alleged "contract" or collective agreement which it is now claimed is in force and resulted from negotiations with the Industrial Council.

First of all what is a collective agreement? Whatever the legal terminology may be, one definition is as follows: "there must be two

parties to a contract or agreement and there must be mutual assent to its terms. Further, to constitute a contract there must be both the 'offer or a promise' or a proposal and the acceptance of that offer or proposal."

In the case of a union contract, the agreement is on behalf of its members who either in assembly, vote to adhere to its provisions or who have instructed officers to bargain for them and authorized them to sign agreements on their behalf. The Contract becomes an important document as it sets forth the parties to its provisions, working conditions, responsibilities, etc. Further it is negotiated on the instructions and authority of the Union members who are a party to it.

Is there such an agreement in effect between the employees in the Brantford Coach and Body, Mohawk Street Plant, and its employers? For the following reasons I must conclude that there is no collective agreement now in force there.

As I pointed out above, after the election of the Industrial Council officers in 1941, a Constitution of the Industrial Council was posted consisting of some thirteen clauses. This is simply an inadequate "constitution" for such a Council setting forth its form of organization and stating what its function will be—i.e., to discuss grievances and working conditions. In no way can this "constitution" be termed a collective agreement or a contract. In the first place a collective agreement implies an agreement on behalf of a collective body and a contract concluded necessarily implies terms to which two or more parties have agreed. The Company has very studiously avoided giving this document recognition as a contract, and it never acknowledged the existence of a "Contract" at the Board meeting. While the Industrial Council "Constitution" might be construed to contain "a proposal" there is certainly no evidence of its acceptance by the Company as it is not a party to the "Constitution," far less being a party to a collective agreement or contract.

It is now generally conceded in modern industrial relations that "good faith" on the part of parties to a Union contract necessitates its expression by the conclusion of a signed agreement.

Eleven days after the election of the representatives to the Industrial Council which was protested by every legal means, short of a strike, by the employees who are members of the Union, documents were posted in the Plant. One set of documents was headed:

"Minutes of meeting of Industrial Council held in Brantford Coach and Body Limited plant on Saturday, June 13, 1942, at 1 p.m."

The first item in these minutes states: "The Constitution of the Industrial Council was the first order of business. This was studied. The adoption of the Constitution to stand, it being considered by the Industrial Council as satisfactory, except Clause No. 1 which should read as follows: 'That all grievances of any employee which are of a serious nature be referred to the Industrial Council, and, if found to be in order, the grievance will then be forwarded for consideration by the management'."

The Company's answer appears on the right hand side of this Document which purports to be minutes of an employees' meeting and is as follows:

"1. Minutes noted by Management. Copies of Constitution, with additional memo, have been posted in all Departments."

Let's recall that the election was held on June 2 and the minutes of the Council meeting are dated June 13, and in the course of the eleven intervening days the "additional memo" consisting in fact of the addition of two pages of material to the existing one page of the "Constitution." All in the intervening eleven days when negotiations for a similar document with the Union in the Company's Pearl Street Plant were necessarily extended over a two month period.

These "minutes" say that the "Constitution was studied." Does a contracting body merely "study" the terms for which it is negotiating? Obviously these terms were prepared for the Council by the management and accepted with little or no comment.

Further, the Company is at this date able to say "Copies of Constitution, with additional memo have been posted in all Departments." This seems to be a farce but, unfortunately, one that will have serious repercussions as it is further evidence of the Company's determined effort to thwart the employees' right to be properly represented.

The "memo" mentioned in the minutes, and consisting of two pages of material, deals with provisions for Hiring and Dismissal, Seniority, Grievance Procedure, Hours of Work, etc., which it must be conceded are of utmost importance in any collective agreement. In spite of that importance, however, again the Company studiously avoids giving it the status of a contract.

On the other hand, the representatives elected to the Council by the means explained above were neither instructed to negotiate the "memo" nor were they authorized to act on behalf of the employees in the Plant. Nor does the "Constitution" give them such authority.

Further, the representatives on the Council did not submit these matters, either before or after their consent to its adoption, to the employees. This "Constitution" cannot, therefore, in any sense be considered as a contractual obligation legally or otherwise. There

never has been an employees' meeting held to consider any of these matters.

In addition to the above contention that there is no contract in existence between the employees of the Company. I submit that even if a document, purporting to be a contract, had been signed by the Council members and the Company it would have been concluded by the Council members who represent a minority only of the employees. Therefore they would not have had the authority to conclude such an agreement. It would have been highly improper for them, as representatives of a defunct or discredited pseudo organization to act on behalf of the majority of the employees with no authority to so act.

It is interesting to note that Mr. Ruby asked a gathering of the employees why should they join an International Union when there was one recognized in the Pearl Street Plant and whatever benefits it secured there would apply to the Mohawk Street Plant. This is obviously another unfair labour practice but, unfortunately, our laws in Canada do not as yet prohibit it. Justice, however, demands that the employees be accorded their legal rights.

Conclusion

I will conclude with the assertion that the employees in the Mohawk Street Plant are entitled as elsewhere to be represented by a Union of their own choosing, free from employers' domination, as stipulated in Order in Council 2685. The employees have made it quite clear that they have chosen U.A.W.-C.I.O. as their Union. They should not be deprived of that right simply because of employers' manoeuvres and strategy which it is hoped will, in the near future, be declared illegal. The employees' protests before and during the vote for Council representatives is sufficient evidence of their desires. And it is that desire with regard to which organization should represent them that must be given consideration, not the choice of the employers. The Council is definitely not the choice of the employees, neither is the "Constitution" a contract or a collective agreement, nor is the vast majority of the employees a party to it. Neither has the employer become a party to the "Constitution" and "Memo" it is now supporting in a final effort to thwart the Union of his employees.

Obviously the Union represents a substantial majority of the employees and there is no existing collective agreement between any other representative body of employees and the employer. Therefore U.A.W.-C.I.O. Local 397 should be accorded exclusive recognition as the bargaining agency on behalf of the employees. Should there be the least doubt about the wishes of the employees, the vote agreed to by the parties in June to be taken by the Department of Labour should be recommended to determine the bargaining agency; and should the vote favour the U.A.W.-C.I.O. Local 397, the Company should be instructed to enter into negotiations with it with a view to the conclusion of a proper collective agreement. Otherwise deplorable industrial relations practices will be countenanced whereby an employer can employ nefarious tactics to have pseudo committees elected and pseudo "agreements" arrived at for the purpose of frustrating the employees' legal rights to proper union representation and recognition.

Respectfully submitted,

(Sgd.) Drummond Wren,
Member.

Dated at Toronto, this 2nd day of November, A.D. 1942.

Report of Board in Dispute between Dominion Engineering Works, Limited, Longueuil, P.Q., and Its Employees

The Board of Conciliation and Investigation established to deal with a dispute between the Dominion Engineering Works, Limited, Longueuil, P.Q., and its employees, members of the Metal Trades Council of Montreal and Vicinity (LABOUR GAZETTE, November, 1942, page 1249), has submitted a unanimous report to the Minister of Labour.

The personnel of the board was as follows: Mr. F. W. Edge, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members: Mr. William C. Nicholson, K.C., appointed on the nomination of the employer; and Mr. James Somerville, appointed on the nomination of the employees. All three reside in Montreal.

The board's report together with the signed agreement, which was negotiated with the assistance of the board, follows:

Report of Board

Re Dispute between the Dominion Engineering Works Ltd., Longueuil, Que., and its Employees, Members of the Metal Trades Council of Montreal and Vicinity.

MONTREAL, NOVEMBER 24, 1942.

To the HON. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

SIR:—

The Board of Conciliation and Investigation appointed by you to investigate the above-

mentioned dispute begs to report that written and oral evidence submitted by both parties to the dispute was heard by the Board at its various sittings held in the Old Court House, Montreal. It soon became evident to the Board that there was no disinclination on the part of the Dominion Engineering Works Limited to make an agreement with the accredited representatives of its employees, therefore, the Board lent its efforts to the task of negotiating an agreement between the two parties.

Your Board is now pleased to report that an agreement has been made, based on the rates of pay and working conditions at present in effect at the Longueuil Plant, and we are enclosing copy of same.

This dispute may now be considered as amicably settled to the mutual satisfaction of both parties.

Yours faithfully,
(Sgd.) F. W. EDGE,
Chairman.
(Sgd.) JAMES SOMERVILLE,
Board Member.
(Sgd.) W. C. NICHOLSON,
Board Member.

1. *The parties to this agreement.*

The parties to this agreement shall be:—

(*a*) Dominion Engineering Works Limited, operating the Longueuil Plant on behalf of and as Agent for His Majesty (hereinafter called the "Company") and

(*b*) The hourly rated employees of Dominion Engineering Works, Longueuil Plant, as represented by The Metal Trades Council of Montreal and vicinity (hereinafter called the "Union").

2. *Wages, working hours and conditions of employment*

(*a*) The hourly rated employees of the Company not represented by the Union will be employed on terms neither more nor less favourable than the terms of employment applicable to the employees covered by this agreement, provided they are in the same trade or classification.

(*b*) The parties hereto recognize that under existing Government regulations wage rates cannot be increased or decreased nor can any term of employment be altered, including any rule, regulation or practice governing working conditions having the effect of or for the purpose of directly or indirectly increasing or decreasing wage rates now in effect without the written direction or authorization of the Regional War Labour Board. Nothing herein contained shall be deemed to restrict either party from applying to the said Board for revision of existing wage rates or working conditions as above-mentioned.

The schedules attached to this agreement outlining present classifications, minimum rates of wages and other matters are for information and guidance only and are not to be considered as a settled part of this agreement. They may be changed from time to time by the Company as circumstances may require or upon the order of the proper Government authority in cases where, under existing Government Regulations, such authority is required.

(*c*) The Company undertakes to allow employees a period of five minutes before the end of each shift to wash-up and to return tools to the tool crib.

(*d*) The Union agrees to work with overtime rates for two shifts of twelve (12) hours so long as the same may be necessitated for wartime production.

(*e*) Employees will be paid during their regular working hours.

3. *Overtime on statutory holidays*

Any time worked on the following days shall be paid for at the overtime rates in force for such days: New Year's Day, Good Friday, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, and all Sundays, and any day declared by statute or decree to be observed as one of the holidays mentioned herein because such holiday would fall on a Sunday.

4. *Classification of employees*

All hourly paid employees of the Company covered by this Agreement shall be classified as follows:—

(*a*) An employee hired as a trainee shall be so classified and paid according to the Company's schedule of wage rates for trainees.

Upon completion of such period of service as a trainee such employee shall be classified as an "Improver" and shall be paid according to the Company's schedule of wage rates for Improvers. Such employee shall remain an Improver until his wage rate reaches the minimum rate of wages for the job classification for the work the employee is performing, whereupon the employee shall become a classified employee.

The Company may at its discretion promote or discharge a trainee or improver at any time before he becomes a classified employee.

(*b*) Every employee other than Trainees and Improvers shall be classified according to the job classifications established by the Company, and every such employee will be entitled to receive the minimum rate of wages established for his job classification.

Every employee shall be notified whenever his job classification is changed. There shall be no discrimination on account of age or sex in classifying any employee.

The classification of an employee in accordance with the terms of this agreement shall be done by the Company. In case of a disagreement over any classification the employee shall be given an opportunity to show whether or not he can qualify for the classification which he believes he deserves, provided a vacancy in such occupational classification occurs.

(*c*) Plant police, guards or watchmen are not covered by this agreement.

5. *Deductions*

Deduction from wages, except those required by law, shall be made only on the written authority of the employee.

6. *Safety and Health*

The Company shall continue to make reasonable provisions for the safety and health of its employees during working hours.

In cases where, in the opinion of the Company, special clothing or protective devices are required for the protection of the employees the same will be supplied by the Company.

7. *Rest Periods*

The Company will allow all employees a ten-minute rest period with pay in the morning and in the afternoon; shifts other than the day shifts shall be allowed two similar periods. An additional ten-minute rest period with pay will be allowed to employees working on a 12-hour shift.

8. *Committee of the Union*

The Union agrees to notify the Company of the names of the members of a Committee appointed by the Union to discuss with the Company any matters or grievances arising out of the operation of this agreement and also of any changes that may take place from time to time in such Committee. All the members of the Committee shall be employees of the Company, and if they are required to leave their jobs for the performance of their duties as members of the Committee they shall obtain leave from their foreman before doing so.

9. *Settlement of Disputes*

Any disputes arising out of this agreement, or any grievances or misunderstandings which any employee or group of employees covered by this agreement may desire to discuss or adjust with the Company shall be handled as follows:

(*a*) The employee concerned may take the matter directly to his foreman alone, or accompanied by a member of the Committee.

(*b*) If a settlement is not reached within a reasonable time, the employee, accompanied by a member of the Committee, may take the matter to the Superintendent of the employee's Department.

(*c*) If a settlement is still not reached, the member of the Committee shall report the matter to the Committee of the Union in writing and the Committee shall discuss the matter with the Works Manager.

(*d*) If a settlement is still not reached, the matter may be referred to an executive officer of the Company.

(*e*) All decisions arrived at between the Company and the Committee shall be final and binding upon the Company, the Committee, and the employee or group of employees concerned.

(*f*) Matters to be dealt with under the foregoing provisions of this paragraph shall normally be discussed during working hours, but lengthy negotiations for settlement of disputes shall be discussed outside of working hours.

10. *Arbitration*

In the event that no agreement is reached through the procedure set forth in Clause 9 hereof the matter may, by mutual consent, be referred to an Arbitration Committee consisting of an equal number of representatives (but not exceeding two each) of the Company and the Committee and the chairman chosen by such representatives. Should the representatives fail within five days to agree on a chairman the Minister of Labour of the Dominion of Canada will be requested by the above-mentioned representatives to name an additional member of the Arbitration Committee who shall act as chairman. After an Arbitration Committee has been formed by the foregoing procedure it will meet and hear the evidence of both sides and render a decision within seven days of the completion of the taking of evidence. The decision of the Arbitration Committtee shall be final and binding upon both parties.

11. *Seniority*

In all cases of lay-off or increases of staff the following factors shall be considered:

(i) Ability, skill and experience.
(ii) Length of Service.

No employee shall have seniority status until he has been continuously employed by the Company for three months as a classified employee.

In the case of equally qualified employees seniority will be taken into consideration by the Company on all occasions when a lay-off is necessary and the Company agrees to discuss with the Committee of the Union any case or instance of hardship or alleged injustice to an employee arising out of any lay-off.

12. *Discharges*

The Management of the Company will upon request notify the Committee in writing of the reason for the discharge of any employee covered by this agreement. Any such action of the Company which, in the opinion of the Committee, results in an employee or a group of employees being unjustly dealt with or discriminated against shall be considered a grievance to be dealt with under the provisions of Clause 9 of this agreement.

13. *Co-operation*

The Union undertakes to co-operate with any Management Labour Production Committee formed by the Company under the provisions of the National Selective Service scheme and will support the enforcement of Company rules and regulations on the part of the employees covered by this agreement.

During the term of this agreement the Company agrees that there shall be no lockout and the Union agrees that there shall be no slowdown, strike or other stoppage or interference with work.

14. *Discrimination*

There shall be no discrimination, interference, restraint or coercion by the Company or any of its agents against any employee because of membership in the Union, and the Union will not coerce employees into membership, or solicit membership, or distribute propaganda, or transact any other business of the Union on the Company's time other than as provided in this agreement. No Union meeting shall be held nor Union notice distributed or posted on the Company's property which has not been approved by the Works Manager.

15. *Leave of Absence*

(*a*) The Company will grant reasonable leaves of absence without pay to delegates of the Union not exceeding three in number, when necessary for the transaction of Union business.

(*b*) Any employee elected as a full-time Union Official shall be given special consideration as to re-employment upon termination of his term of office. If at such time a position suitable to his position and experience is open he shall be given preference over other applicants.

16. *Approval and termination*

The present agreement shall be subject to the approval of the Minister of Munitions and Supply insofar as the same may be necessary and shall terminate immediately upon the Company ceasing to operate the Longueuil Plant on behalf of and as Agent for His Majesty.

Subject to the foregoing this agreement shall become effective on the 23rd day of November, 1942, and shall remain in effect for one year

thereafter unless changed by mutual consent of the parties hereto.

It shall be binding for a further period of one year unless either party shall have given the other written notice of the termination of the agreement one month before the last day of the period prescribed by this agreement.

17. *Notices*

Any notices required to be sent to the Union hereunder shall be effectively given when posted to The Metal Trades Council of Montreal and vicinity at Room 207, 1502 St. Catherine Street W., Montreal, and any such notices required to be given to the Company shall be effectively given when mailed to the Company, P.O. Box 220, Montreal, Que.

This Agreement shall be signed on behalf of the Parties hereto by their duly authorized officers this 23rd day of November, 1942.

Dominion Engineering Works Limited, operating the Longueuil Plant on behalf of and as Agent for His Majesty.

(Sgd.) H. G. Walsford, Vice-President.
(Sgd.) F. W. Evens, Secretary.

The Metal Trades Council of Montreal and Vicinity.

(Sgd.) Robert Haddow,
(Sgd.) J. Leopold Bissonette.

SCHEDULE "A"

DOMINION ENGINEERING WORKS, LIMITED.—(LONGUEUIL PLANT)

MINIMUM RATES OF WAGES FOR TRAINEES AND IMPROVERS—HOURLY RATE EMPLOYEES

Trainees

Male trainees over 18 years of age or male trainees of any age holding a certificate from a recognized training school:

First 12 weeks of employment—35 cents per hour.

Second 12 weeks of employment—40 cents per hour.

Male trainees under 18 years of age not holding a certificate from a recognized training school:

First 4 weeks of employment—25 cents per hour.

Second 4 weeks of employment—30 cents per hour.

After the first eight weeks of employment the employee will be rated on the same basis as trainees over 18 years of age commencing at 35 cents per hour.

Female trainees over 18 years of age:

First 4 weeks of employment—27½ cents per hour.

Second 4 weeks of employment—30 cents per hour.

After the first eight weeks of employment the employee will be rated on the same basis as male trainees over 18 years of age commencing at 35 cents per hour.

All trainees on night shift shall receive 2½ cents per hour more than on day shift except while in the school.

Trainees while in the school shall not be paid time and a half for overtime. Time and a half for overtime shall be paid all trainees as soon as they are put on production.

Improvers

At the completion of the second 12 weeks of employment at 40 cents per hour the trainee's rate shall be increased to 45 cents per hour. As soon as a trainee attains a wage rate of 45 cents per hour he shall be classified as an "Improver."

The wage rate of an Improver shall be increased 5 cents per hour at the end of each four weeks of employment as an Improver until the Improver receives the minimum rate established by the Company for the job classification for the work the employee is performing.

As soon as an Improver receives the minimum rate for his job classification as above he shall immediately become a "classified employee."

Improvers on night shift shall receive 5 cents per hour more than on day shift.

Improvers shall receive payment for overtime on the same basis as "classified employees."

The Company may at its discretion promote or discharge a trainee or an improver at any time before he reaches the minimum rate for his job classification as above provided.

Night Shift

Minimum wage rates for the above job classifications on the Night Shift shall be 5c per hour more than the above schedule of rates.

SCHEDULE "C"

DOMINION ENGINEERING WORKS, LIMITED—(LONGUEUIL PLANT)

OVERTIME REGULATIONS—HOURLY RATED EMPLOYEES

All hourly rated employees except as noted below shall be paid overtime rates as follows:

Time and one-half for all hours worked in excess of nine (9) hours per day and five (5) hours on Saturdays (but not over twelve (12) hours) except on Sundays and Legal Holidays when they shall be paid on the basis of double time.

Double time will be paid for all hours worked in excess of twelve (12) hours per day.

The exceptions are as follows:—

Yardmen and Labourers

Time and one-half for all hours worked in excess of nine (9) hours per day (but not over twelve (12) hours) except on Sundays and Legal Holidays when they shall be paid on the basis of double time.

Double time will be paid for all hours worked in excess of twelve (12) hours per day.

Power House Men, Firemen and Coal Passers

(i) for all hours worked on Sunday, the employee will be paid time and one-half.

(ii) for all hours worked from Monday through to Saturday in excess of 60 hours the employee shall be paid time and one-quarter, or

(iii) for all hours worked in excess of twelve (12) hours on any one day the employee shall be paid time and one-quarter.

Penalties for Late Starting

The Timekeeper will dock employees for being late, as follows:

From 2 to 15 minutes—3/10ths of one hour.
Over 15 to 30 minutes—5/10ths of one hour.
Over 30 to 60 minutes—one hour.

Lateness up to sixty (60) minutes will not be taken into consideration in the calculation of overtime. Any employee being late more than sixty (60) minutes will be paid for overtime on the basis of actual hours worked.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING NOVEMBER, 1942

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purposes of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, and war work, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Fredericton. The territory of the officers resident in Vancouver comprises British Columbia and Alberta: officers stationed in Regina and Winnipeg cover the provinces of Saskatchewan and Manitoba; the officers resident in Toronto confine their activities to Ontario; the officers in Montreal to the Province of Quebec, and the officer resident in Fredericton represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

During November, sixty-eight disputes were referred to the Industrial Relations Branch of the Department. In a great number of these cases, and in other disputes carried over from the preceding month, Industrial Relations Officers were instrumental in bringing about an amicable settlement of the matters in dispute. The following statement, however, summarizes only those disputes of major importance and is not intended as a complete review of the activities of the Branch during the month.

WOODWORKERS, SOUTHAMPTON, ONTARIO.—Late in October, a complaint was received from Local Union No. 2690, United Brotherhood of Carpenters and Joiners, that nineteen of its members had been dismissed because of union membership by the Dominion Plywood Company, Southampton, Ontario. The Director of Industrial Relations requested the Conciliation Service of the Province of Ontario to assign an investigator, one of its officers having already been in touch with the situation. As a result of two visits to the locality by this official, nine employees were reinstated and at last report, it appeared likely that four or five others would be reinstated. The investigating officer agreed that the other dismissals were warranted. The plant is engaged on the fabrication of aeroplane plywood.

COAL MINERS, NANAIMO AND CUMBERLAND, B.C.:—Approximately 1300 employees of Canadian Collieries (Dunsmuir) Limited stopped work on October 21 and 22 protesting the alleged delay of the National War Labour Board on the findings of the special Commission appointed to investigate the application of the United Mine Workers of America, District 18, for a 30 per cent increase in wages. In its report the Commission, under the chairmanship of Professor W. G. McBride of McGill University, Montreal, P.Q., with Mr. A. L. Smith, K.C., Calgary, Alberta, representing the employees, and Dr. J. W. Gray, Sydney, N.S., representing the company expressed the opinion that the mines could not be operated by the company if any increase in wage rates was granted. The Commission made no recommendations to the National War Labour Board, considering itself to be a fact-finding body only. Mr. F. E. Harrison, Western Representative, Dominion Department of Labour, Vancouver, mediated. A vote was conducted by the employees on October 28, 519 being in favour of a return to work and 401 against. The Union also decided to make application to the National War Labour Board for the application of the wage rate schedule in effect in the Crow's Nest Pass area. Work was resumed October 30. On November 24, an Emergency Coal Production Board was established by Order in Council to examine coal production in Vancouver Island. The Order authorized the company to pay the rate of wages set out in their wage agreement, supplement No. 7 of November 16, 1942. The Board was also authorized to examine and report upon the financial ability of the company to pay increases in wages; to make recommendations as to the extent to which the Government should financially assist the company if it is determined that the company is unable to pay the increased wages authorized and to determine the desirability of continuing the operations of all the collieries in the district having regard to the availability of manpower and the conditions of production in the several collieries.

PIPEFITTERS AND MACHINISTS, VICTORIA, B.C.:—A serious dispute, which at times threatened to affect production, developed during October between two groups of workers employed by Yarrows Limited, Victoria, B.C.

All outward evidence indicated that the dispute was purely a jurisdictional one relating to operations connected with steel-pipe bending. The company follows what is stated to be an "Old Country" practice in its methods of assigning to machinists certain operations involved in the installation of pipes on vessels under construction. This practice was embodied in an agreement with the National Union of Machinists, Fitters and Helpers (C.C.L.). Strong objection was taken to these methods by the United Association of Journeymen Plumbers and Steamfitters (T.L.C.C.), which organization claimed that they infringed upon operations ordinarily performed by pipefitters under Canadian methods, and that they were contrary to the established procedure in other Western shipyards. Numerous efforts to settle the dispute by mediation or resort to independent arbitration were made during November by Mr. F. E. Harrison, Western Representative, Dominion Department of Labour, Vancouver and Mr. G. R. Currie, Industrial Relations Officer, Vancouver. At the end of the month the interested organizations were studying a proposal that a committee composed of members of the Victoria Trades and Labour Council and of the Victoria Labour Council should act as mediators.

MACHINISTS, SIMCOE, ONTARIO.—It was reported to the Department on October 29, that two employees of Canners' Machinery Limited, Simcoe, Ontario, had been discharged by the company because of their membership in the United Automobile Workers of America and activity on its behalf. Mr. J. P. Nicol, Industrial Relations Officer, Dominion Department of Labour, Toronto, who was assigned to make an investigation of the complaint, reported he was convinced that the allegation the employees had been dismissed for union activities was unfounded. Reference is also made, on page 1374 to the application of the union on behalf of the employees of the same company for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute concerning union recognition and the negotiation of a collective agreement.

ROOFING MATERIAL WORKERS, PORTNEUF STATION, P.Q.:—On November 3, an Industrial Relations Officer were requested to investigate a labour dispute existing in the plant of Bishop and Sons, Limited, and Mr. L. Pepin, Industrial Relations Officer, Montreal, was assigned to the case. The dispute developed out of the fact that an employee, who had resigned as a member of the National Catholic Syndicate of Pulp and Papermakers of Portneuf, had retained a position on the Employees Committee. It was charged that this man had lost the confidence of the other employees, that he was under the influence of the management, and that he was using his elective position on the Committee to promote the company's interests. Harmony was restored when the employee in question agreed to resign from the Committee.

GAUGE AND PRECISION TOOL MAKERS, GALT, ONTARIO.—In October, 90 of the 95 employees of Whitehall Machine and Tools, Limited, Galt, Ontario, served 7-day notices of separation upon the manager of the company. Mr. J. L. MacDougall, Industrial Relations Officer, Ottawa, visited the plant early in November and persuaded the workers to withdraw their notices of separation and continue work. The dispute arose out of feelings engendered when the majority control of the company changed hands as the result of a stock transaction. Earlier in the year a one-day strike had taken place for a similar reason. At that time, the Government named an official of the Department of Munitions and Supply as Controller of the plant and retained the former president of the company as general manager. Following the recent incident, the Department of Munitions and Supply decided to place a resident manager in charge of operations who will be responsible to the Controller.

WELDERS, PIPEFITTERS AND HELPERS, LAUZON, P.Q.—On November 19, the Department was advised that the electrical welders of Geo. T. Davie and Sons Limited and Davie Shipbuilding and Repairing Company, Limited, were on strike and that the pipefitters and helpers of the latter company would go on strike on November 23. Previously, on October 23, following a strike which began on October 20, the pipefitters of the Davie Shipbuilding and Repairing Company had agreed to resume work on the understanding "that a Committee of the workers be constituted as soon as possible for the purpose of investigating and submitting to the company any grievance, claim or complaint filed by the workers and that a time limit of one month from to-day (October 23) be granted to the workers' representative in order to file with the National War Labour Board at Ottawa an application for a wage increase as agreed upon during the course of this meeting." On November 17, the employees were informed that a telegram of October 20 to the Minister of Labour requesting assurance that journeymen would be paid 90 cents an hour and helpers 60 cents an hour, could not be considered as an application to the National War Labour Board and that up to that time no formal application had been received by the National War Labour Board for such increases. The employees were advised, on November 21, that their action in going on strike was in violation of

the Industrial Disputes Investigation Act, P.C. 5963 (Wartime Wage Control Order) and National Selective Service Regulations. On the same date Mr. Raoul Trepanier, Industrial Relations Officer, Dominion Department of Labour, Montreal, was assigned to the case. The pipefitters and helpers went on strike on November 23. As a result of the intervention of an official of the Canadian Congress of Labour, a meeting of employees was held on November 26 at which it was agreed that work would be resumed and that a delegation representing the workers involved would proceed to Ottawa for an interview on November 30 with the Executive of the National War Labour Board. At this interview the delegation was advised that the request for increased basic wage rates would be dealt with when a formal application was filed with the Board. Welders and pipefitters of the Davie Shipbuilding and Repairing Company resumed work on the morning of November 27; while the strike of welders and pipefitters of the Geo. T. Davie and Sons Limited was reported terminated November 25.

TRANSPORT WORKERS, WINDSOR, ONTARIO.—One hundred and thirty Windsor transport workers failed to report for work on November 21, seriously affecting the movement of supplies to and from essential war industries. Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was instructed to investigate. The dispute, which culminated in strike action, arose out of the alleged delay on the part of the Automobile Transport Association in negotiating a collective agreement with the Teamsters and Chauffeurs Union 880, A.F. of L. The workers were advised that the strike was illegal being in violation of the Industrial Disputes Investigation Act, recourse to which should have been taken prior to strike action. The workers returned to work on November 25, a joint meeting of the operators having been arranged by Mr. Ainsborough for November 26. On that day it was decided that when the employees had their proposed agreement ready for presentation, it would be forwarded to Mr. Ainsborough who would transmit it to the operators. A meeting between the operators and workers to discuss the proposed contract was tentatively set for December 1.

ORDNANCE WORKERS, HAMILTON, ONTARIO.—On November 24, the Department received a complaint from the United Electrical Radio and Machine Workers of America stating that the president of Local Union No. 515, Hamilton, Ontario, had been suspended by Otis-Fensom Elevator Company Limited for "alleged violation of plant rules." On November 26, Mr. J. P. Nicol, Industrial Relations Officer, Toronto, conducted an inquiry which revealed that the suspension of the employee in question was warranted, he having wilfully disobeyed a written rule of the company forbidding unauthorized assemblies in the plant. The company was persuaded, however, to restore the employee to his position when he signed a statement recognizing that he had been in error and undertaking to abide by plant rules, if reinstated.

DRY DOCK AND SHIPBUILDING WORKERS, SAINT JOHN, N.B.—A wage dispute, of considerable duration, culminated in a stoppage of work by some 800 employees of St. John Dry Dock and Shipbuilding Company Limited, on the afternoon of November 25. A reference as to wage rates had been made to the National War Labour Board in March, 1942, at which time the employees of the firm were represented in negotiations with the management by four Unions affiliated with the Trades and Labour Congress of Canada, and two chartered by the Canadian Congress of Labour. One independent Union was organized later. Dissatisfaction with the Finding and Direction of the National War Labour Board gave rise during the summer to a refusal by the employees to work more than 44 hours per week. This failure to work overtime created serious problems in the drydocking of naval and other vessels and in making urgent repairs to ships over week-ends. In September, the four T.L.C.C. unions signed a collective agreement with the management, based on the Finding and Direction of the National War Labour Board and accepting wage adjustments as from March 1, 1942. However, the two C.C.L. unions and the independent organization (all of which later became amalgamated) refused to accept the March 1 adjustments and in order to enforce a general increase in wages, persisted in their refusal to work overtime. The National War Labour Board notified the parties that a Finding and Direction would not be made until the employees resumed their normal hours of work (approximately 56). Following mediation by Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B. (whose services had also been utilized on numerous earlier occasions), the employees agreed to resume overtime work as of October 29. A new Finding and Direction of the National War Labour Board relative to the application for general increases, made in September, reached the parties and was discussed at conferences on November 24 and 25, Mr. Pettigrove participating in the conferences on the second day. The Finding and Direction provided for wage increases in certain occupational classifications, retroactive to September 8. The Union representatives refused to accept this decision, demanding that the

wage increases be made retroactive to March 1, 1942, and that increases for certain occupational classifications be made to bring them into conformity with rates payable in a Halifax Shipyard. An agreement was reached between the company and the negotiating committee that a joint application would be submitted to the National War Labour Board on a small number of specific adjustments. All members of the Union were requested to discontinue work at 2 p.m. on November 25 to attend a mass meeting, at which the joint proposals were endorsed. Work was resumed November 26.

STEEL-MILL WORKERS, VANCOUVER, B.C.—Approximately 1,200 employees of Hamilton Bridge Western Limited ceased work on November 27-28 on account of the company's alleged refusal to negotiate a closed-shop contract with the Boilermakers' and Iron Shipbuilders' Union (C.C.L.), and in protest of the company's action in signing an agreement affecting welders and burners affiliated with the Amalgamated Building Workers of Canada. Mr. F. E. Harrison, Western Representative, Dominion Department of Labour, Vancouver, advised the Executive Committee of the Boilermakers' and Iron Shipbuilders' Union to resume operations and make application for the establishment of a Board of Conciliation and Investigation. On November 30, Mr. Harrison reported that following conferences arranged by him between the Union representatives and Managements concerned, the employees of Hamilton Bridge Western Limited agreed to resume work on the afternoon of November 30, and under a similar arrangement a threatened strike of the employees of West Coast Shipbuilders' Limited was averted. A further conference between the management of both companies and the unions concerned was arranged for December 1.

Union Representation Votes

MUNITIONS WORKERS, WINDSOR, ONTARIO.—By joint consent of the parties concerned, a ballot under Departmental supervision was conducted on October 29 among employees of Defence Industries, Limited, Windsor, Ontario, to determine the following question: "Do you desire the U.A.W.A.—C.I.O. to represent you to bargain with your employer on your behalf?" The result of the ballot, announced on November 4, was as follows: voting "Yes", 18; voting "No", 9; spoiled ballots, 0.

CHEMICAL WORKERS, WINDSOR, ONTARIO.—By joint consent of the parties concerned, a ballot, under Departmental supervision, was conducted on October 29 among employees of Canadian Industries Limited, Windsor, Ontario, to determine the following question: "Do you desire the U.A.W.A.—C.I.O., to represent you to bargain with your employer on your behalf?" The result of the ballot, announced on November 14, was as follows: voting "Yes", 253; voting "No", 162; spoiled ballots, 3.

AIRCRAFT PRODUCTS WORKERS.—At the request of the parties concerned, a ballot, under Departmental supervision, was conducted on November 20, among employees of Dowty Equipment (Canada) Limited, Montreal. The text of the ballot was as follows: "Is it your wish that the International Association of Machinists, Lodge 712, act as bargaining agent on your behalf in negotiations with your employer, Dowty Equipment Canada Limited?" The result of the ballot was as follows: Eligible to vote, 76; voting "Yes", 45; voting "No", 28; spoiled ballots, 1.

MUNITIONS INSPECTORS, MONTREAL, P.Q.—By joint consent of the parties concerned, a ballot was conducted under Departmental supervision on November 25 to determine the wishes of employees of the Inspection Board of the United Kingdom and Canada engaged on the premises of Canada Strip Mills Limited, Montreal, P.Q. The text of the ballot read: "Do you wish to be represented by the Canadian Union of Inspectors of War Supplies, an affiliate of the Canadian Congress of Labour?" Out of 29 eligible, 21 voted "Yes" and 6 voted "No." There were no spoiled ballots.

Fire Hazards in Industry

Mr. W. J. Scott, K.C., fire marshal for Ontario, has suggested the following "fire hideouts" which should be eliminated in all industrial plants:—

1. Loose electric connections.
2. Worn or frayed electric cords.
3. Insulated cables near hot equipment.
4. Unguarded welding operations.
5. Wherever open flames are used.
6. Where static is generated near flammable vapours.
7. Bridged fuses.
8. Defective chimney fire arrestors.
9. Wherever workmen smoke.
10. Improperly oiled bearings.
11. Where spontaneous ignition may occur.
12. Dirty flues and ducts.
13. Dirty, oily or overloaded motors.
14. Where light bulbs contact combustibles.
15. Dipping tanks and cleaning operations using flammable solvents.

67746—3½

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1942

DURING the month of November there were 27 strikes and lockouts recorded, involving 20,490 workers and causing a time loss of 103,770 man working days, as compared with 26 strikes in October, 1942, involving 6,107 workers and causing a time loss of 26,926 days. The figures for the month of November, 1941, showed 12 strikes, with 4,740 workers involved and a time loss of 41,764 days. During the month under review one strike of motor vehicles factory workers at Windsor, Ont., accounted for more than 70 per cent of the workers involved and over 80 per cent of the time loss.

Two strikes involving 222 workers were carried over from October and 25 commenced during November. Of these 27 strikes 25 were terminated during the month. Three resulted in favour of the workers, four in favour of the employers, six were compromise settlements and twelve were indefinite in result.

At the end of the month two strikes were reported as unterminated, namely: textile factory workers at Montreal, P.Q., and asbestos miners and grinders at East Broughton, P.Q.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Such strikes are listed in this paragraph for a period up to one year after their removal from the table of current strikes.

The following comparative table gives information for October and November, 1942.

Date	Number of strikes	Number of employees involved	Time loss in man working days
*November, 1942.....	27	20,490	103,770
*October, 1942.....	26	6,107	26,926
November, 1941.....	12	4,740	41,764

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1942*

Industry, occupation and locality	Number involved		Time loss in man working days	Particulars†
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to November, 1942				
MANUFACTURING—				
Textiles and Clothing—				
Textile factory workers, Montreal, P.Q.	1	177	3,500	Commenced October 13, 1942; for union recognition and agreement; unterminated.
SERVICE—				
Business and Personal—				
Laundry workers, Saskatoon, Sask.	2	45	400	Commenced September 19, 1942; for union recognition; terminated November 30 (employment conditions no longer affected; replacement; in favour of employer.
(b) Strikes and Lockouts commencing during November, 1942				
MINING—				
Coal miners, Princeton, B.C.	3	120	360	Commenced November 2; for closed shop union agreement with increased wages; terminated November 4; conciliation (federal); return of workers pending negotiations; indefinite.
Coal miners, Springhill, N.S.	1	*(a)* 20	20	Commenced November 4; *re* measuring of working places; terminated November 5; negotiations; compromise.

(e) 4,800 indirectly.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the May issue, in the review of "Strikes and Lockouts in Canada and Other Countries, 1941". The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919, in the various countries for which such figures are available. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones. An order under the Defence Regulations, effective July 25, 1940, provides for the settlement of disputes and the prevention of strikes and lockouts, as noted in the LABOUR GAZETTE, August, 1940, page 760.

The number of disputes beginning in September was 123, and 9 were still in progress from the previous month, making a total of 132 disputes in progress during the month; 25,000 workers were involved in the disputes in progress during the month and the time loss was 53,000 working days.

Of the 123 disputes beginning in September, 40 arose out of demands for increased wages and 34 over other wage questions; 5 over working hours; 23 over questions as to the employment of particular classes or persons; 18 over other questions as to working arrangements; and 3 on questions of trade union principle. Final settlements were reached in 111 disputes, of which 11 were settled in favour of workers, 72 in favour of employers and 28 resulted in compromises; in 18 other disputes, work was resumed pending negotiations.

Australia

For the third quarter of the year 1941, the number of disputes was 185, directly involving 125,056 workers, with a time loss of 557,693 working days; for the fourth quarter of the year, corresponding figures were 163 disputes, 41,362 workers and a time loss of 170,665 working days. For the year 1941, as a whole, the number of disputes in existence during the year was 590, directly involving 240,845 workers; the time loss for the year was 984,174 working days.

United States

The number of strikes beginning in October was 235, involving 60,000 workers in these new strikes. The time loss for all disputes in progress during the month was 325,000 man-working days.

More Efficient Use of Available Resources in Great Britain

Great Britain's Production Minister, the Rt. Hon. Oliver Lyttelton, recently announced a wide-spread transfer of labour from less heavily burdened areas to those which no longer could supply all the workers needed for essential production.

Capt. Lyttelton declared that Britain was nearing the peak mobilization of labour. The nation could not, broadly speaking, get any further production from drafts of new labour into the munitions industries. Nor could an increase in production by construction of new factories be expected.

The peak of production, however, had not been reached, and this must be aimed at by making better use of the labour and plants now at hand.

Capt. Lyttelton cited cases where individuals and firms had obtained contracts (from other firms) unsuited to their technique or equipment. These firms were using skilled and other labour which would contribute far more to efficient war production if it could be used in factories properly supplied in all respects except labour.

In such cases, he said, if no other remedies were applicable, he intended acting on the advice of regional boards, to prohibit the individuals or firms concerned from taking further orders for the kind of work in question. Their labour would be transferred where it could be more usefully employed.

In some caces, according to Capt. Lyttelton, transfers will apply not only to labour but to plants. Labour will be moved to areas where it will be more useful, but what is more, machinery will be moved to centres where it can be better employed.

COLLECTIVE BARGAINING RIGHTS EXTENDED TO CROWN COMPANY EMPLOYEES

New Order in Council Establishes Right of Workers in Government Owned Companies to Join Trade Unions and Bargain Collectively

AN important and significant development in the Government's labour policy is the extension to employees of Crown companies, which have been established in Canada since the commencement of the war, of the right to join trade unions and to bargain collectively.

These privileges are accorded by Order in Council P.C. 10802, which was passed by the Governor General in Council on December 1, on the recommendation of the Minister of Labour, Hon. Humphrey Mitchell.

In November, 1939, the provisions of the Industrial Disputes Investigation Act were extended to include all companies engaged in war industries, and in June, 1940, with the object of avoiding labour unrest and speeding up production, Order in Council 2685 (LABOUR GAZETTE, July, 1940, pp. 678-9) recommended the principle that the right to join trade unions and bargain collectively be extended to employees of such companies.

Since that time the Government has set up a number of Crown plants engaged in various phases of war activity, and the status of employees of such plants has been made the subject of representations to the Minister of Labour by organized labour groups.

Mr. Mitchell made a comprehensive study of the request that employees of Crown plants should be accorded similar rights to those enjoyed by workers in privately owned plants, and recommended an Order in Council establishing these rights.

The Order in Council, P.C. 10802, which was approved, provides that the principles enunciated in Order in Council P.C. 2685 shall apply to employees in Crown companies, and extends the provisions of the Industrial Disputes Investigation Act to Crown company employees.

The effect of this latest Order in Council is that employees of Government owned companies may now apply to their managements for collective bargaining rights and may, if the necessity arises, make application to the Department of Labour for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

In the preamble to P.C. 10802 the Minister of Labour represented to the Governor General in Council that the improvement of relations between employers and employees is of vital importance in accelerating the production of war supplies and munitions of war and in leading to the full support of the national war effort by the work people of Canada in all branches of industry.

Crown companies are described in the Order as comprising any corporation engaged in the manufacture of war materials, having a share capital the majority of the shares of which are held by or on behalf of His Majesty, and any corporation having a share capital, in respect of any plant or establishment or part thereof and directly controlled by an officer of His Majesty for a period exceeding three months.

Employees affected by the Order include any person employed by a Crown company to do any skilled or unskilled manual, clerical or technical work.

The Order states that any employee of a Crown company shall be free to join or continue membership in a trade union and to participate in the administration and lawful activities of a trade union.

Coercion or intimidation of any kind to influence any employee of a Crown company either to join or abstain from joining a trade union is prohibited. Attempts to organize a trade union in working hours are not authorized.

No officer, agent or other employee of a Crown company shall, while acting on behalf of the company, participate or in any manner interfere with the formation or operation of a trade union.

The refusal to employ a person or dismiss an employee by reason of his membership in a trade union, or the imposition of penalties to compel an employee to abstain from becoming or continuing to be a member of a trade union is also prohibited.

An officer or agent of a Crown company may negotiate with any of its employees with a view to the conclusion of a collective agreement covering the employees of such company whom they represent providing that the employees participating in the negotiations are the properly chosen representatives of a trade union to which the majority of the employees of the company belong, or to which the majority of its employees in any trade or craft which is appropriate for collective bargaining purposes belong. Further, it is provided that no Crown company shall enter into any collective agreement any provision of which, in the opinion of the Minister of Labour, will have the effect of restricting or hampering productive output except in so far

as is necessary for the protection or the safety and health of employees.

Any difference regarding the appropriate bargaining agency shall be determined by the Minister of Labour who may refer such difference to an Industrial Disputes Inquiry Commission. Where any such difference arises between a Crown company and its employees other than a difference, the provisions of the Industrial Disputes Investigation Act shall apply.

Nothing in the Order shall be deemed to limit or restrict in any way the operation of the provisions of P.C. 5963, the Wartime Wages Control Order.

Text of Order in Council

The following is the text of the Order in Council, P.C. 10802, of December 1, 1942:—

Whereas the Minister of Labour represents that the improvement of relations between employers and employees is of vital importance in accelerating the production of war supplies and munitions o war and in leading to the full support of the national war effort by the work people of Canada in all branches of industry;

And whereas by Order in Council P.C. 2685, dated June 19, 1940, certain principles for the avoidance of industrial unrest were approved, including therein, amongst others, the following:

(i) that employees should be free to organize in trade unions, free from any control by employers or their agents;

(ii) that employees, through the officers of their trade union or through other representatives chosen by them, should be free to negotiate with employers or the representatives and employers' associations concerning rates of pay, hours of labour and other working conditions, with a view to the conclusion of a collective agreement;

(iii) that there should be no interruption in productive or distributive operations on account of strikes or lockouts and that where any difference arises which cannot be settled by negotiation between the parties, assistance in effecting a settlement should be sought from the Government conciliation services, and failing settlement of the difference in this manner, it should be dealt with in accordance with the provisions of the Industrial Disputes Investigation Act, which has been extended under the War Measures Act to apply specifically to all war work;

And whereas increases or decreases in wage rates and alterations in terms of employment governing working conditions of employees, having the effect of increasing or decreasing wage rates directly or indirectly, are now subject to the provisions of The Wartime Wages Control Order, Order in Council P.C. 5963, dated July 10, 1942;

And whereas the Government of Canada has caused certain corporations to be incorporated to act as agents of His Majesty in the production of certain war supplies or of munitions of war or in the furnishing of certain necessary services or in connection therewith has assumed sole and direct control over the operations of certain corporations, in whole or in part;

And whereas it is deemed advisable for the welfare of Canada, by reason of the state of war now existing, without restricting or limiting the provisions of the said Wartime Wages Control Order, to make provision for the application of the principles set out above in respect of such corporations or operations;

Now, therefore, His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, and under the authority of the War Measures Act, chapter 206, Revised Statutes of Canada, 1927, is pleased to order and doth hereby order as follows,—

1. In this Order, unless the context otherwise requires,

(*a*) "Crown company" means any corporation engaged in the manufacture of war materials, having a share capital the majority of the shares of which are held by or on behalf of His Majesty and any corporation having a share capital, in respect of any plant or establishment or part thereof the operations of which are wholly and directly controlled by an officer of His Majesty for a period exceeding three months;

(*b*) "employee of a Crown company" means any person employed by a Crown company to do any skilled or unskilled manual, clerical or technical work;

(*c*) "trade union" means any combination of employees formed for the purpose of regulating relations between employers and employees but shall not include any such combination which denies membership to any person on the grounds of citizenship, nationality, race, creed or colour.

2. Any employee of a Crown company shall be free to join or to continue membership in a trade union and to participate in the administration and lawful activities of a trade union.

3. Nothing in this Order shall be construed in any way to authorize an employee of a Crown company in the exercise of the right to join or to organize a trade union, to use either coercion or intimidation of any kind to influence any person to join or to abstain from joining a trade union, or to work for or to attempt to organize a trade union in working hours at his place of employment.

4. No officer, agent or other employee of a Crown company shall, while acting on behalf of the company, participate in or in any manner interfere with the formation or operation of a trade union.

5. No Crown company, or officer or agent thereof acting on behalf of the Company, shall refuse to employ any person or shall dismiss or threaten to dismiss any employee of such company for the reason that such person or employee is a member of a trade union and no Crown company or officer or agent thereof shall seek by intimidation or by threats or by the imposition of any pecuniary or other penalty to compel any employee to abstain from becoming or continuing to be a member of a trade union.

6. A Crown company or officer or agent thereof may negotiate with any of its employees with a view to the conclusion of a collective agreement covering the employees of such company whom they represent provided that the employees participating in the negotiations are the properly chosen representatives of a trade union to which the majority of the employees of such company belong or to which the majority of its employees in its plant or in any of its plants or in any department of a plant

or in any trade or craft which is appropriate for collective bargaining purposes, belong, whether or not such representatives are accompanied by persons not employees of the company who are representatives of a trade union of which the employees' union is a part; but no Crown company shall enter into any collective agreement any provisions of which in the opinion of the Minister of Labour will have the effect of restricting or hampering productive output except in so far as is necessary for the protection of the safety and health of the employees.

7. Any difference between a Crown company and its employees as to whether any persons are properly chosen representatives of a trade union, or as to the number of employees in a plant, department of a plant, craft or trade who are members of a trade union or as to whether any such department, craft or trade is appropriate for collective bargaining purposes shall be determined by the Minister of Labour who may refer such difference to an Industrial Disputes Inquiry Commission appointed pursuant to the provisions of Order in Council P.C. 4020, dated June 6, 1941, as amended.

8. Where any difference arises between a Crown company and its employees, other than a difference which in the opinion of the Minister of Labour is a difference of the nature described in section seven of this Order, the provisions of the Industrial Disputes Investigation Act, except subsections (*e*) and (*f*) of section two and section sixty-four thereof and of all Orders in Council applicable in respect of disputes within the scope of that Act shall, in so far as such difference constitutes a dispute within the scope of that Act, be applicable thereto.

9. Nothing in this Order shall be deemed to limit or restrict in any way the operation of the provisions of The Wartime Wages Control Order, Order in Council P.C. 5963, dated July 10, 1942.

EMERGENCY COAL PRODUCTION BOARD ESTABLISHED

Action Taken to Relieve Shortages—New Board Given Wide Powers to Stimulate Increased Production

DECLARING a grave emergency in the field of coal production the Government, through the Honourable J. L. Ilsley, Minister of Finance, on December 2 announced the creation of a three-man Emergency Coal Production Board with wide powers to stimulate and organize increased coal production in Canada. J. McG. Stewart, K.C. of Halifax, Coal Administrator under the Wartime Prices and Trade Board since the outbreak of war, is the Chairman of the new Board, which is responsible to the Minister of Finance. The other members of the Board are Mr. Charles Payne, Secretary, Local No. 2665, United Mine Workers of America, Mountain Park, Alberta, and Graham F. Towers, Governor of the Bank of Canada.

Coal production in Canada has increased substantially since the outbreak of war. Prior to the war Canadian production averaged 15,000,000 tons a year, and consumption 27,000,000 tons a year. In 1941 Canadian production reached 18,200,000 tons but consumption increased to nearly 40,000,000 tons. Up until mid-summer of 1942 production continued to increase, but in recent months the rate of production has begun to slip, and unless remedial measures are effected, production in 1943 will fall to 16,000,000 tons and perhaps even less.

While the over-all coal supply position throughout Canada is sufficient for the current season, very serious local shortages have developed in several parts of Western Canada, and one of the immediate tasks of the new emergency Board was to deal with production problems in these areas.

It should be pointed out, Mr. Ilsley added, that in many areas where acute local shortages now exist consumers had failed to act upon the emphatic and repeated warnings of the Coal Administrator urging them to take delivery of their winter coal during the summer months and offering them through the banks special arrangements for financing such purchases. In Ontario and Quebec, where many thousands of people followed the Administrator's advice, the heavy summer deliveries have saved the situation. Had they not done this, many areas in the central provinces would to-day be in a most difficult situation.

Outlook Serious for 1943

The really serious position, however, is the prospect for 1943. Canadian war industry is still expanding, Canadian railways will be handling even greater quantities of freight, and the demand for coal for ships' bunkers will continue to increase.

The estimated Canadian coal requirements for 1943 are 46,000,000 tons. The United States, because of its own expansion of industry, its own railway congestion, and its own coal mine labour problem, will almost certainly be unable to increase its shipments to Canada. The prospective Canadian balance sheet for coal for 1943 indicates a shortage of about 8,000,000 tons. This deficit will have to be met in part by increased production and in part by conservation in use.

The recent declines in the rate of coal output have been due chiefly to labour leaving the coal mines, some to other industries, many

into the armed forces. Those that have gone have been largely from the younger and more active age groups. With the exception of a few individual mines the production per man is tending to fall, with the result that the total output is falling more rapidly than the number of men employed.

The principal objective of the Emergency Coal Production Board will be to stimulate increased coal production by all available means with a view to reversing the downward trend in output and establishing new highs in Canadian production.

Powers and Duties of New Board

The powers and duties of the new Board will include power to open new mines or re-open closed mines. It will also have power to close small inefficient mines wherever the labour employed in these can be transferred to more efficient operations. In certain sections in Canada labour now employed in coal pits producing less than two tons per man per day could be more effectively employed working in seams which yield four or five tons per man per day.

The Board will have power, after consultation with the provinces and with labour, to suspend for the duration of the war any rules or regulations respecting employment in coal mines which may be found to be serious impediments to maximum production. It will have power to direct the production policy of mines and, where necessary, to provide financial assistance to mines which find themselves financially unable to continue in maximum production.

The Emergency Coal Production Board will work in close co-operation with the Wartime Prices and Trade Board and National Selective Service. The Wartime Prices and Trade Board, through its Coal Administrator, will continue to be responsible for prices, distribution and allocation of coal and the Board's Administrator will be the Chairman of the new Emergency Production Board. National Selective Service will continue to be responsible for implementing labour supply policy but it will be a duty of the new Board to make recommendations to National Selective Service from time to time.

The Emergency Coal Production Board will not have jurisdiction in respect of wages and wage rates, which will remain with the National War Labour Board, but its knowledge and experience will be made available to the National War Labour Board.

If the war program is to be carried through, and if acute suffering is to be avoided next winter, increased production must be accompanied by maximum conservation in the use of coal. Every householder, every person responsible for the heating of business or commercial premises should exercise the greatest economy in the use of coal. The Emergency Coal Production Board, in co-operation with the Coal Administrator, will develop plans to give leadership and direction along the lines of such conservation.

Painting Machinery

"In Germany, America, and to a lesser extent England," according to an article by David E. Roe appearing in a recent issue of *Industrial Welfare and Personnel Management*, a British publication, "experiments have been carried out in painting machinery with definite objects in view.

"In one scheme all the machines in one shop may be painted in different bright colours, care being taken that machines which are adjacent to each other are not painted in discordant colours. It has the dual function of introducing brightness and at the same time inducing a certain degree of interest in the operative. Thus it is found that the operative takes greater care in keeping his machine clean and, furthermore, when maintenance men are oiling they are not so prone to be careless, and any oil which is spilt is seen at once and usually wiped off.

"An even more interesting use of paint on machine tools has been developed by the Philadelphia Electric Company and E.I. du Pont de Nemours & Company. Machine tools are painted in such a manner that the focal point of operation in the machine is painted in a colour which contrasts with the body of the machine. This has the effect of focussing the attention of the operative upon the point on which he must concentrate and so reduces the number of mistakes made. The danger point is usually painted in a light shade, for example cream or buff, but obviously this will depend upon the colour of the material which is being machined and to a lesser extent upon the type of lighting used and the general colour scheme in the immediate vicinity. Such schemes reduce visual fatigue very appreciable and materially reduce the number of accidents which may occur."

67746—4½

DESIGN FOR POST-WAR SOCIAL SECURITY IN GREAT BRITAIN

Summary of Report by Sir William Beveridge on "Social Insurances and Allied Services"

ONE of the most important documents arising out of proposed plans for the post-war world is the report on "Social Insurances and Allied Services" issued recently in Great Britain by Sir William Beveridge, outstanding authority on socio-economic problems.

This report (which was submitted to the British Parliament) provides a blueprint for a comprehensive social security program. It is a consolidation and extension of existing social legislation in Great Britain and was prepared by a committee which included twelve representatives of Government Departments and Branches appointed in June, 1941. As aptly stated by its author, the report, of 300,000 words, covers "the whole of life," and envisages a post-war society buttressed on a strong foundation of social responsibility.

The following is an official summary of Sir William Beveridge's report which has been received by the Department of Labour.

Origin and Terms of Reference

The survey, on which the recommendations of Sir William Beveridge's Report on Social Insurance and Allied Services are based, was instituted on 10th June, 1941.

The terms of reference were:—

"To undertake, with special reference to the inter-relation of the Schemes, a survey of the existing national schemes of social insurance and allied services, including workmen's compensation and to make recommendations."

In January, 1942, it was announced to be "within the power of the Committee to consider developments of the National Insurance Schemes in the way of adding death benefits with any other risks which are at present not covered by such schemes."

The duty of survey was laid upon an interdepartmental Committee, under the chairmanship of Sir William Beveridge. The departmental officials acted as the Chairman's "advisers and assessors on the various technical and administrative matters with which they were severally concerned"; and the Report is the Report of Sir William Beveridge and not of the Committee (p. 2 and para. 40). The Committee received evidence from more than a hundred organizations and individuals. A full list is given in Appendix C; the memoranda submitted are printed in a separate volume (Cmd. 6405) as Appendix G of Sir William Beveridge's Report.

Survey of Existing Schemes

The immediate task was to make, for the first time, a comprehensive survey of the whole field of social insurance and allied services, which have been developed during the last 50 years, and to show what provision is now made and how it is made for the different needs of the population.

The survey thus included health insurance, unemployment insurance, old age pensions, widows' and orphans' pensions, workmen's compensation for industrial accident and industrial disease, non-contributory pensions for old age, public assistance and blind assistance. It does not attempt to deal with other social provisions such as housing, education or industrial welfare.

The results of this survey are set out in Appendix B of the Report, which gives a short history with statistical details of the existing social insurance schemes. They show the gratifying fact that "provision for most of the many varieties of need through interruption of earnings and other causes that may arise in modern industrial communities *has already been made in Britain* on a scale not surpassed and hardly rivalled in any other country in the world." The comparison is made in Appendix F of the Report. In one respect only, namely, limitation of medical service, both in the range of treatment which is provided as of right and in respect of the classes of persons to whom it is provided, does Britain's achievement fall seriously short of what has been accomplished elsewhere. Sir William Beveridge's Report suggests that the existing provisions for social security require to be unified and their administration to be simplified so that certain present deficiencies, anomalies and lack of co-ordination may be removed.

Recommendations and Changes

The greater part of the Report is devoted to recommendations and changes proposed to that end. In making these proposals, the Report "uses experience but is not tied by experience"; the scheme is in some ways a revolution, "but in more important ways it is a natural development from the past."

It suggests much that is new, it retains basic features which are familiar. In particular the finance of the Plan for Social Security rests on the present three part scheme of contribu-

tions, from workers, employers and the State, which was established in 1911, and has been in force for thirty years.

A list of the principal changes proposed by the Report is given in paragraph 30 of Part I, which forms an introduction and summary. These changes and the reasons behind them are discussed in Part II of the Report. Part III sets out to calculate a minimum level of subsistence and considers the special problem of old age pensioners. Part IV deals with the cost of the scheme and the manner in which the cost is to be shared between employers, employees and the State. In Part V the plan for social security is explained in detail. The meanings of various terms used are explained; details are given of the benefits proposed; the contribution conditions attached to these benefits are laid out and the technical and administrative details of the plan are outlined. A detailed Table of Contents, list of Appendices and list of Tables are given on pp. 296-99.

The plan suggested by Sir William Beveridge for social security depends on three assumptions defined in paragraph 301.

"*Three Assumptions:* No satisfactory scheme of social security can be devised except on the following assumptions:—

(*a*) Children's allowances for children up to the age of 15, or if in full-time education up to the age of 16;

(*b*) Comprehensive health and rehabilitation services for prevention and cure of disease and restoration of capacity for work, available to all members of the community;

(*c*) Maintenance of employment, that is to say avoidance of mass unemployment."

These assumptions are discussed in Part VI of the Report; the final paragraphs are concerned with the abolition of want as a practical post-war aim and with planning for peace in war. Sir William Beveridge uses the term Social Security to denote "the securing of an income to take the place of earnings when they are interrupted by unemployment, sickness or accident, to provide for retirement through age, to provide against loss of support by the death of another person, and to meet exceptional expenditures, such as those connected with birth, death and marriage. Primarily social security means security of income up to a minimum, but the provision of an income should be associated with treatment designed to bring the interruption of earnings to an end as soon as possible."

Social security as envisaged in this Report is pre-eminently not a plan "for giving to everybody something for nothing and without trouble." It is a plan to secure to each citizen an income adequate to satisfy a national minimum standard "*on condition of service and contribution* and in order to make and keep men fit for service."

The changes suggested therefore "accord with two views as to the lines on which the problem of income maintenance should be approached"; *firstly*, "that benefit in return for contributions rather than free allowance from the State is what the people of Britain desire." (para. 21). *Secondly*, "whatever money is required for provision of insurance benefits should come from a fund to which the recipients have contributed . . ."

The insured persons should not feel "that income for idleness, however caused, can come from a bottomless purse . . . The place for direct expenditure and organization by the State is in maintaining employment of the labour and other productive resources of the country." (para. 22).

Unification

Twenty-three changes are proposed in the Report. They are concerned, on the one hand to unify existing schemes, on the other hand to extend these existing schemes to cover new classes of persons and new types of risk.

As regards unification Sir William Beveridge suggests that there should be a Ministry of Social Security which would take over the duties of present Government Departments in respect of health, pensions and unemployment insurance; the work of the Assistance Board; and the duties of local government authorities in respect of public assistance.

One stamp on one insurance document, payable weekly, would cover all social insurance schemes. The rates of benefit and the conditions of contribution and benefit would, generally speaking, be assimilated.

Extension

As regards extension of social insurance, the plan would include all citizens without upper income limit, but the contributions made and types of benefit received would vary according to different needs of six groups of the population. (Classes I-VI). The classes are:—

i. Employees (Insured by weekly contributions on employment book).

ii. Other gainfully occupied, including employers, traders and independent workers of all kinds. (Insured by contribution on occupation card.)

iii. Housewives, that is married women of working age. (Insured on marriage through housewife's policy.)

iv. Others of working age who are not gainfully occupied, as for example, students above the age of 16, persons of private means, and unmarried women engaged in domestic duties not for pay. (Insured by contributions on Security Card.)

v. Persons below working age. (No contribution paid.)

vi. Persons retired above working age. (Insured by contributions paid during working age.)

All classes would be insured for medical treatment and funeral grant; children's allowances would be payable for Class V; retirement pension to Class VI. The benefits available to married women, Class III, are a special feature of the Plan for Social Security and are explained in paragraphs 339-347. Housewives are recognized as a distinct insurance class with benefits adjusted to their special needs. These include, in all cases, marriage grant, maternity grant, widowhood and separation provisions and retirement pensions. Share of the husband's unemployment or disability benefits and maternity grants, differ for reasons explained in the Report, between housewives who have no occupation outside their homes and those who are gainfully occupied.

A new basis is suggested for co-operation between the State and Friendly Societies in Change 3 (paragraphs 48-73) whereby voluntary insurance to supplement compulsory insurance remains an integral feature of the plan.

The Report suggests, in Change 23, that it would be advantageous to convert the business of industrial assurance into a public service under an Industrial Assurance Board. This proposal arises partly as a consequence of Change 3 and partly from the study of the administrative cost and other features of industrial assurance given in detail in Appendix D

Rates of Benefit

Sir William Beveridge bases his proposals on calculations made (see Part III, paragraphs 215 to 232) of the minimum cost of subsistence); a complete list of levels of benefit is given in paragraph 401 here reproduced.

Provisional Rates of Benefit and Contribution	*Shillings per week*
Unemployment, Disability and Training Benefit	
Man and not gainfully occupied wife (joint benefit)	40/–
Man with gainfully occupied wife not on benefit	24/–
Single man or woman, aged 21 and upwards	24/–
Single man or woman, aged 18-20	20/–
Boys or girls 16-17	15/–
Married woman gainfully occupied when herself on benefit	16/–
Retirement Pension (after transition period of twenty years)	
Man and not gainfully occupied wife (joint pension)	40/–basic
Single man or woman, man with gainfully occupied wife, woman contributor with husband below pensionable age (single person)	24/–basic
Addition to basic pension for postponement, in respect of each year of postponement—	
On joint pension	2/–
On single pension	1/–
Maternity Benefit (13 weeks)	
Married woman, gainfully occupied whether paying contributions or exempt, in addition to maternity grant	36/–
Widow's Benefit (13 weeks)	36/–
Guardian Benefit	24/–
Dependant Allowance	
Dependant above age for children's allowance of person receiving unemployment disability or training benefit	16/–
Children's Allowance	
For each child when responsible parent is in receipt of any benefit or pension, and for each child after the first in other cases, allowances graded by age averaging over all children in addition to existing provision in kind	8/–
Industrial Pension	
For total disability	Two-thirds of assessed weekly earnings, but not more than £3 a week and not less than would have been paid as disability benefit and dependant allowance if any.
For partial disability	Pension proportionate to loss of earning power.

	Grants
Marriage	Up to £10 according to number of contributions.
Maternity	£ 4
Funeral	
Adults	£20
Age 10-20 years	£15
Age 3-9 years	£10
Under 3 years	£ 6
Industrial	To be determined in accordance with Regulations (para. 334)

For cases of industrial accident and disease it is proposed that these should receive the normal rate of disability benefit for the first thirteen weeks and afterwards should, if totally disabled, obtain benefit based on two-thirds of their assessed weekly earnings, with a maximum of £3 a week and a minimum based on their disability benefit.

Old Age Pensions

Special provisions are made for raising the present basic pension of 10/– a week to the same level as unemployment and disability benefit over a transitional period of twenty years. In Table XI on page 91, the Report shows that in 1901 there were about 2¼ million persons of pensionable age, in 1941 the figure was 5½ million and in 1961 it will be over 8 million.

The increasing number of old persons makes the problem of old age pensions very difficult and very costly. These and other considerations are set out in paragraphs 233 to 240. Sir William Beveridge proposes that the present contributory pension of 10/– a week (20/– for man and wife) should be raised to 14/– (25/– for man and wife), in the first year of the new scheme, and would then rise by 1/– per week (1/6d per week for man and wife) every two years thereafter, and would by the end of twenty years be 24/– for the single man and 40/– for man and wife. Thus over a period the contributory pension would increase, and the supplementary or assistance pension based on a Means Test would gradually cease to be necessary. For the purpose of the Report the year 1945 is taken as the first full year of the scheme and, therefore, the full scale of contributory pension would be reached in 1965. This arrangement is somewhat similar to the arrangement in New Zealand which is referred to in paragraphs 16 and 241 of the Report. The arrangements just mentioned refer to people who are either contributory pensioners at the moment or are contributors for pensions under the existing scheme. In addition, Sir William Beveridge proposes to bring into pensions insurance all other persons not at present included, and for these persons the basic pension of 14/– or 24/– will start to be paid ten years after the beginning of the scheme, i.e. 1955, and will rise to the full rate by 1965. All these pensions would be made conditional on retirement, i.e. upon giving up regular earnings; any casual earnings above a certain amount received after retirement would entail a partial reduction of the basic pension. Existing pensioners in receipt of 10/– contributory pension would, however, have the option of continuing to work and receiving the 10/– or retiring and going on to the 14/– immediately. Persons who desire to continue working after pensionable age (65 for men and 60 for women) would receive a higher contributory pension on retirement according to the number of years they continue working after pensionable age. For each year that the claim for pension is deferred, a marired man would receive an extra 2/– per week on his pension, and a single man 1/– per week. Examples of the manner in which the contributory pension would increase automatically are given in paragraph 242, and examples of the manner in which the postponement of retirement additions operate are given in paragraph 246.

Finance

The Plan for Social Security is based on the contributory principle. The Report considers the alternative of financing the whole scheme from general taxation but rejects this method in favour of the contributory principle for the reasons given in paragraphs 272 to 274. Only two items which enter into the Social Security Budget will be financed wholly out of taxation; these are children's allowances and national assistance. All the cash benefits other than these two items will be financed out of a Social Insurance Fund into which

will be paid the contributions of insured persons, employers and an Exchequer Grant. There will also be paid from this Social Insurance Fund a contribution towards the total cost of the health and rehabilitation services.

The total expenditure on all items covered by the Social Security Budget is estimated at £697 million in 1945, rising to £858 million in 1965. Details of the expenditure are given in Table XII, which is reproduced at the end of this Summary. The division of the total expenditure between the three parties—employees, employers and State—is explained in Table XIII, p. 102 of the Report.

All this is not new or additional expenditure. There already exist large schemes of Health, Unemployment and Pensions Insurance, etc., and in 1938-39 these cost in total £342 million to the various parties. During the present war extensions have been made in these services, particularly in the introduction of supplementary pensions and the raising of the rates of benefit in other schemes. As a result of these and other factors, it is estimated that the cost of the present schemes will be £432 million in 1945. The Report thus suggests an increase in total expenditure of £265 million. The proportions to be borne by each of the three parties concerned (National Exchequer, insured persons and employers) are given in Table XII on page 112. This Table shows that of the £265 million increased expenditure, £86 million will fall on the Exchequer, £125 million on insured persons, and £54 million on the employers of insured persons. Between 1945 and 1965 the total expenditure is estimated to increase by £161 million and this extra sum will fall on the Exchequer.

The rates of weekly contribution proposed in the Report for Classes I, II and IV are given in paragraph 403, as follows:—

—	Male			Female		
	Insured Person	Employers	Joint	Insured Person	Employers	Joint
Class I—						
Age 21 and upwards	4/3	3/3	7/6	3/6	2/6	6/-
18–20	3/6	2/9	6/3	3/-	2/-	5/-
16–17	2/6	2/6	5/-	2/-	2/-	4/-
Class II						
Age 21 and upwards	4/3	—	—	3/9	—	—
18–20	3/6	—	—	3/-	—	—
16–17	2/-	—	—	2/-	—	—
Class IV						
Age 21 and upwards	3/9	—	—	3/-	—	—
18–20	3/-	—	—	2/6	—	—
16–17	1/6	—	—	1/6	—	—

Special arrangements are suggested for financing the cost of disability arising from industrial accident and disease. Part of the cost will be spread over all employers and workpeople and part will be levied on the dangerous industries in accordance with the risk in those industries.

The finance of the scheme is examined in detail by the Government Actuary in a memorandum printed as Appendix A. to the Report.

TABLE XIII.—ESTIMATED COST OF SOCIAL SECURITY TO EXCHEQUER, INSURED PERSONS AND EMPLOYERS AT VARIOUS DATES

—	£ million			
	1938–39	1945		1965
		Commitments under existing arrangements	Proposed	Proposed
	(1)	(2)	(3)	(4)
National Exchequer (and Local Rates for hospitals and public assistance)	212	265	351	519
Insured Persons	55	69	194	192
Employers	66	83	137	132
Other (mainly interest)	9	15	15	15
TOTAL	342	432	697	858

SECURITY PROVISION FOR MAN, WIFE AND TWO CHILDREN (PRESENT CONTRIBUTORY CLASSES) BASED ON TABLE XIV.

	PRESENT		PROPOSED IN PLAN FOR SOCIAL SECURITY	
	Amount	Period and Conditions	Amount	Period and Conditions
Unemployment	38/- per week	26 weeks (followed by assistance on means test).	56/- per week	Unlimited in time without means tests at any time. Subject to attendance at a training centre if unemployment is prolonged.
Liability other than industrial.	18/- per week	26 weeks, followed by 10/6 per week in disablement. Additional benefit in some cases.	56/- per week	Unlimited in time without means test at any time.
Old Age	20/- per week	Supplemented by Assistance Board according to needs.	40/- per week	On retirement, 2/- a week increase for each year of postponement of retirement. (Full rate only after transition period of twenty years. Assistance pensions on means test meanwhile.)
Widowhood	18/- per week		40/- per week	Reduced by part of any earnings. 52/- per week for first 13 weeks without reduction.
Maternity	£2		£4	
Maternity in wife gainfully occupied.	£2 additional		36/- per week for 13 weeks additional.	
Funeral	Nil		£20	With smaller sums for children.
Industrial Disability	Half earnings up to maximum of 35/- per week. (Plus 8/- for the two children).	Subject to compounding for lump sums.	56/- p.w. for 13 weeks followed by pension of two-thirds earnings up to maximum of 76/- p.w. but not less than 56/- p.w. No compounding for total disability.	
Medical Treatment.	General Practitioner for man, with additional treatment benefits in some cases.		Comprehensive medical treatment including hospital, dental and ophthalmic, nursing and convalescent homes for whole family. Post-medical rehabilitation.	

Engineering Cadetship in Great Britain

The Ministry of Labour and National Service in Great Britain has established a scheme for Engineering Cadetships leading to technical commissions in the fighting services.

Under this plan boys aged 16, 17, 18, and 19 are invited to apply for Engineering Cadetships if:—they left school before October, 1942; they are not employed in any branch of engineering; and they have obtained the necessary academic qualifications at school. Applicants for Engineering Cadetships are chosen by a Selection Board on which all three services are represented.

The training of Cadets is carried out under the directions of the Education Departments. So far as can be arranged each cadet attends a Technical College near his home. During their courses Cadets cover the basic engineering science required in the Associate Membership Examinations of either the Institute of Mechanical Engineers or the Institution of Electrical Engineers. While receiving this training, a Cadet is a member of one of the pre-Service organizations or of the Home Guard. Membership of a particular organization does, however, not necessarily determine the service in which a Cadet will be commissioned upon the completion of his training.

Cadets also attend periodic lectures by Service Officers and make visits to technical units and workshops.

The tenure of an Engineering Cadetship is subject to satisfactory progress and conduct. But, as a rule, the training usually continues until the Cadet has reached the age of 20. The length and character of the training of Cadets is adjusted to their age and educational qualifications. In general Cadets aged 18 and 19 attend courses of training for 18 to 24 months while Cadets aged 17 attend similar courses for 2 years and 6 months. Boys of 16 receive preliminary instruction at an appropriate Technical college or other institution.

The Government pays the necessary educational fees and allows each Cadet a maintenance grant of £140 a year (in London £160 a year) if he has to live away from home or £75 a year (in London £90 a year) if he lives

ACTIVITIES OF NATIONAL SELECTIVE SERVICE

Transfer of Call-up Machinery—Man-power Advisory Committees—Assistance of Farmers in Lumbering and Mining—Appeal for Coal Miners—Special Order Concerning Christmas Employment

ON December 1, 1942, the mobilization machinery for the army was transferred from the War Services Department to the National Selective Service Branch of the Labour Department. With the transfer, both military and civilian man-power needs have been co-ordinated under National Selective Service.

Honourable Humphrey Mitchell, Minister of Labour, in a recent statement said that the transfer took place without interruption.

Major-Generals T. L. Tremblay and H. J. Riley, appointed joint associate directors of the military section of Selective Service in October, are responsible for administration of the mobilization service. Under them is the complete organization that existed in the War Services Department, including: headquarters staff, the divisional boards, registrars and sub-staffs as well as the medical services.

The personnel of the mobilization service remains unchanged and A. de Gaspé Taché, formerly director of mobilization, continues as supervisor of mobilization. The 13 regional boards, now known as Mobilization Appeal Boards, will function as they have in the past but the Minister of Labour has authority to increase the size of boards.

The National Registration of 1940 is being kept up to date, as before, and is serving as the basis for the call-up. All persons liable to register are required to do so and persons who have changed their addresses must notify the national registration division of National Selective Service, Ottawa. Cards are available in all post offices for this purpose.

It is anticipated that this co-ordination will effect a better working arrangement. Immediate action, for example, has beeen taken through the operation of National Selective Service regulations to see that men seeking employment be required to produce proof that they have complied with regulations dealing with military training. This is an effective method of discovering men who are delinquent in this respect. It is also the intention to ask employers to check over their payrolls and satisfy themselves that employees have complied with these regulations.

Man-power Advisory Committees

In dealing with the man-power problems of particular industries National Selective Service has consulted representatives of both management and labour. This consultation has been provided by industry Man-power Advisory Committees. Committees have been established for the pulp and paper, coal mining, hardrock mining, and jewellery industries, and are in the process of formation for the needle trades, steel, and printing and publishing industries. The Director of National Selective Service recently announced that a Man-power Advisory Committee on Agriculture would be set up.

The Pulp and Paper Man-power Advisory Committee has given invaluable assistance in connection with man-power problems arising out of the curtailment of that industry due to power shortage. This Committee has been instrumental in arranging for the transfer of displaced pulp and paper workers to war industries, in explaining to the industry the necessity for curtailment, and in acquainting the industry with National Selective Service policy and regulations.

In this connection the Committee sponsored what is believed to be the first joint management-labour conference of a major industry on a national basis in Canada. This conference was held in Montreal on November 14-15. The first session was addressed by the Power Controller, who explained the necessity for curtailment; by the Newsprint Administrator, who discussed the way in which the curtailment program was developed; by a representative of National Selective Service, who indicated the role played by National Selective Service in the curtailment situation; and by representatives of organized labour, who presented labour's views on the situation facing the pulp and paper industry. The remaining sessions of the conference were devoted to consideration and explanation of National Selective Service regulations.

The Jewellery Man-power Advisory Committee has also been active in planning to meet any curtailment within this industry. The members of the Committee have discussed curtailment problems with the Jewellery Administrator.

Assistance of Farmers in Lumbering and Mining

National Selective Service, through the Special Services Division, has undertaken a campaign to enlist the services of upwards to 100,000 farmers in coal and base metal mines

and in logging and sawmill camps during the farming off-season.

Statistics for November show that 23,342 permits to seek employment outside agriculture were granted. In addition to the recorded movement of men, as shown by the issuance of permits to seek employment, many more are believed to have gone into logging operations under the special provisions in the regulations which allow agricultural workers to take off-season employment in other essential industries for periods up to 30 days without permits.

The placement offices have on record 12,520 men who went into logging and 1,120 who went into coal mining. It is estimated that at least 10,000 more men, who did not require permits, left farms during the slack winter season for logging work.

A break-down of the available figures for November show that the following number of farm workers have entered coal mining and logging: Ontario, logging 4,301; Quebec, logging 3,723; Maritimes, coal mining 179; logging 1,409; Manitoba, logging 305, Saskatchewan, mining 115, logging 52; Alberta, mining 744, logging 807; British Columbia, mining 82, logging 1,923.

Permits to seek employment outside agriculture were granted as follows by provinces: Maritimes, 3,187; Quebec, 9,089; Ontario, 5,356; Manitoba, 2,225; Saskatchewan, 1,387; Alberta, 1,287; British Columbia, 811.

The request for these workers has been directed to only those persons who are not needed on the farm in the off-season, which may include part of the fall and all winter, until late March or early April.

Federal, provincial and municipal government officials have co-operated in supplying information to assist farmers in getting off-the-farm work during their slack seasons. A booklet entitled "A Message for Farmers" in English and French has been mailed to all farmers on rural routes or who have post office boxes, throughout a number of areas in Canada. A special advertisement in weekly and farm newspapers, and the use of radio announcements of the farm broadcasts were used to reach farmers.

The advertising was framed in such a way as to eliminate in so far as possible the movement of men to employment more distant from their home community than is necessary. In some cases movement of some considerable distance was required, but the aim has been to direct prospective employees to seek work as near to their homes as is feasible.

Departments of every provincial government are co-operating with the Dominion in moving farm workers into mining and logging during the winter months. Agricultural representatives, lands and forests officials and similar provincial fieldmen are acting as representatives, with full information about the man-power needs in mining and logging, the areas in which the needs exist and how farmers can get in touch with potential employers, either through Employment and Selective Service offices or directly.

Authorization has also been given to certain representatives of employers to visit defined rural areas in an effort to obtain men for specified industries or firms. These representatives must have written authorization from Selective Service authorities which includes instructions. The area in which a representative may recruit is defined. Each representative is given a list of other industries or firms with high labour priority to which he should send any available workers who do not wish to be employed in the industry for which he is recruiting; for example, a representative of a lumber company might be given the names of coal or base metal mines for which he could find workers who did not wish to do bush work. It is necessary that each representative be certain that agriculture will not suffer by the removal of persons being recruited. The representatives report to the nearest Employment and Selective Service Office the names, present addresses, future locations and character of employment, of each man taken from agriculture. Any transportation arrangements are at the expense of the companies for whom the men are recruited.

Under National Selective Service Regulations, farmers may accept employment outside agriculture without permit for a period not exceeding thirty days. Accordingly, a large number of farmers have proceeded directly to bush and mine operations without permit, but, in cases where it has been anticipated that the period of employment outside of agriculture would exceed thirty days, application has been made at the nearest local Employment and Selective Service Office for a permit. Farmers engaged without permit under the thirty-day rule may quit that employment without notice of separation, but when the employment is covered by permit, the farmer may not leave the operations without first serving seven days' notice of separation.

To encourage farmers and farm workers to return to agriculture in time for spring work, an expiry date is being placed on the employment permits.

Appeal for Coal Miners

In addition to the efforts to induce farmers to take off-season work in coal mines, other steps have been necessary to meet this national emergency.

Labour Minister Humphrey Mitchell, in collaboration with the four western Provincial Governments, the mine operators and the representatives of the miners, made an appeal to the mayors of Western Canada and to all employers situated from the head of the Great Lakes westward to canvass their employees to see if there are any skilled coal miners among them. The appeal was issued regardless of the essentiality of the industries.

The mayors and employers were asked to grant to the ex-coal miners leave of absence from their jobs, with protection of their seniority and pension rights. The Government paid transportation costs of those skilled men who were willing to return to the mines.

A directive was sent out to the Selective Service Officers in Employment and Selective Service Offices as another means of finding more workers for this industry. Applicants for permits who register at any office and who give their occupation as coal miners, are to be induced to return to coal mines.

In addition to these efforts, The Emergency Coal Production Board was established with wide powers to stimulate and organize increased coal production in Canada. The objectives, powers and duties of this new Board are outlined on page 1404.

Special Order Concerning Christmas Employment

National Selective Service Regulations were relaxed to permit postal authorities and the retail trade to give temporary seasonal employment to certain classes of men and women during the Christmas season. An order to this effect was made by the Director of National Selective Service on November 24, 1942, with the approval of the Minister of Labour.

Affected by the order were: students and teachers during the Christmas vacation, men more than fifty-nine years of age, women more than forty-four years of age and, where there are more than sufficient women to meet the requirements of high priority industry in a given locality, women who are less than 45 years old.

Under the order Selective Service Regulations which require permits to seek employment, seven days' notice on termination of employment, etc., do not apply to temporary seasonal employment in retail trade or by the Post Office Department during the period from December 13 to January 5. No person employed without permit pursuant to this order may continue in such employment without permit after January 5, 1943.

In addition to assisting employers, the order was designed to make it easy for the classes named to obtain work during the Christmas rush and to ease the burden on the local Employment and Selective Service Offices at that time.

Youth Welfare in Scotland

The Committee appointed by the Secretary of State for Scotland to inquire into means of carrying out the Government's newly developed youth welfare scheme has recently issued its report.

A broad view of the scope of youth service schemes is taken by the Committee which declares that youth councils must not be satisfied with short-term plans suited to the present emergency but must

> prepare now such resources as will enable young people to be prepared for work, citizenship, industrial and community living, and for the all-round development of their physical, mental, moral and spiritual life. The youth councils, also, will be charged with the duty of ascertaining and considering the living and working conditions of young people in relation to their leisure time and its beneficial use.

The Committee proposed that local education authorities should assume full responsibility for building up the youth service in their respective areas and should be assisted by youth councils acting as advisory committees and representing local health, police and government authorities, churches, voluntary organizations, employers, trade unions, the medical profession, pre-service training organizations, the Ministry of Labour, the Educational Institute of Scotland and the Workers' Educational Association or other suitable educational body. Local youth panels should be set up as district committees to advise on the special needs of each district and to execute the policies of the education authorities.

The Committee declared that the Government's scheme for youth welfare should not affect the independence of the voluntary organizations, but that youth councils should endeavour to secure increased co-operation between voluntary organizations and statutory authorities in the field of youth welfare by such means as the organization of music and drama festivals, sports and games, competitions and handicraft exhibitions.

MAN-POWER REGULATIONS IN THE UNITED STATES

Paul V. McNutt, Chairman of the U.S. War Man-Power Commission, Given Control over Employment and over Calling up of Men for Military Service

AS a result of regulations which came into effect on December 5, the United States has taken steps towards the establishment of full governmental control over its man-power, both for military and industrial needs.

The new regulations came into effect through an executive order signed by President Roosevelt. They give broad powers to the chairman of the War Man-power Commission, Mr. Paul V. McNutt, which may be summarized briefly as follows:—

1. Control of the Selective Service System (i.e. the machinery by which men are called up into the armed forces.)
2. Power to direct that the hiring of workers, in any establishment, occupation or area designed by the chairman, be conducted solely through the United States Employment Service.
3. Power to assure that no employer retain in his employ any worker whose services are more urgently needed elsewhere.

The President's order also terminates voluntary enlistments in the United States armed forces, the Army and Navy being directed to obtain their recruits henceforward solely through the Selective Service System.

President Roosevelt stated in his order that it was issued "in order to promote the most effective mobilization and utilization of the national man-power and to eliminate so far as possible waste of man-power due to disruptive recruitment and undue migration of workers."

Five-Point Man-power Program

At a press conference Mr. McNutt declared that the total population would now be considered a national pool from which the needs of the armed forces, war industries, agriculture and essential civilian activities would be supplied. He outlined the use he planned to make of his new powers in the following five-point program:—

1. Allocation of man-power to armed forces, war industries, agriculture and other essential civilian activities.
2. Efficient use of labour for war industries.
3. Mobilization of the nation's labour reserves.
4. Transfer of workers from less essential activities to activities essential to the support of the war.
5. Providing labour needed for essential agriculture.

Management-Labour Policy Committee

Under the terms of the Order, Mr. McNutt is instructed to appoint a "management-labour policy committee", to be selected from the fields of labour, agriculture, and industrial management, and to "consult with the members thereof in carrying out his responsibilities."

Control of Hiring

The section of the Order directing that employment in certain cases be conducted solely through the governmental Employment Service reads as follows:—

> In so far as the effective prosecution of the war requires it, the chairman shall take all lawful and appropriate steps to assure that all hiring, rehiring, solicitation and recruitment of workers in or for work, in any establishment, plant, facility, occupation or area designated by the chairman as subject to the provisions of this section shall be conducted solely through the United States Employment Service or in accordance with such arrangements as the chairman may approve.

Mr. McNutt indicated that he would not immediately use this power to its utmost extent, and that for the time being the ordinary methods of hiring workers would continue.

"The authorization for the regulation of hiring", he said, "is clearly a necessary control in areas of critical labour shortages.

"Although I am determined to exercise this authority, where necessary, to prevent labour hoarding and allocate essential workers to war plants, action will be taken only in those areas and with respect to those occupations where it is essential to meeting labour requirements.

"Until further clarification, it should be understood that presently approved methods of recruiting and hiring may continue."

Release of Workers from Non-essential Industry

The provisions of the Order restricting employers from retaining in non-essential employment workers needed elsewhere are as follows:—

> No employer shall retain in his employ any worker whose services are more urgently needed in any establishment, plant, facility, occupation or area designated as more essential by the chairman pursuant to this section.

Mr. McNutt said that the newly-strengthened Commission was prepared to "ration scarce labour where available man-power is insufficient to meet all competing demands."

Acting with the advice of other government agencies, he said, the Commission "has established priorities for the use of labour, based on the urgency of various kinds of war production and services and linked to the production schedule and the flow of materials."

Adjustment of Hours of Work to Promote Production

"Steps are being taken", Mr. McNutt declared, "to adjust hours of work to a realistic standard designed to safeguard health and to promote production."

This adjustment, he said, would include reduction of hours in industries where they have been so "excessive" as to reduce efficiency and increase absences from work.

It also would include increasing hours in industries where "labour demands are inflated and production limited by an unnecessarily restricted working schedule," he declared.

He announced that he was taking steps "to effect the transfer of the hundreds of thousands of workers needed to meet the manpower demands of essential industries and services" and that machinery was being established to assure those transferred "suitable standards of wages and working conditions."

Allowances for Undue Hardships

In regard to the restrictions on employment, the chairman is directed in the order to take steps to prevent and relieve gross inequities or undue hardships, in so far as he finds so doing will not interfere with the effective prosecution of the war. A hearing is to be assured to any person claiming that any action under the terms of the Order is unfair or unreasonable as applied to him .

Call-up for Military Service

The Selective Service System, which in the United States administers the calling up of men for military duty, is transferred by the Order, with all its functions, to the War Man-power Commission. Mr. McNutt declared that the system would operate as a bureau within the Commission with Major General Lewis B. Hershey continuing as its chief.

The relationship between the military chiefs and Mr. McNutt is defined in the Order as follows:—

> The Secretary of War and the Secretary of the Navy shall, after consultation with the chairman, determine the number of men required to be selected each month in order to fulfil the total respective requirements of the Army and Navy as approved by the President. The chairman shall furnish the required number of men through the Selective Service System.

Voluntary enlistments into the armed forces are halted for all men between the ages of 18 and 38. The Army and Navy can now obtain recruits only through the Selective Service System.

Mr. McNutt asserted that this centralization of man-power control under a single authority, was "a prerequisite to any adequate attack upon the tremendous task of allocating men to the armed forces and to war industry."

"The transfer of the Selective Service System" he declared, "and the restrictions of voluntary enlistments, will make possible a unified plan for the orderly withdrawal of men from civilian life with the least possible disturbance of essential war production."

Seniority Rights for Workers Shifting to War Production

In regard to the transfer of workers to war production, President Roosevelt, shortly after issuing the man-power order, appealed to employers in civilian industries to assure employees who take up war work that their seniority rights will be protected, as the seniority rights of those who go into the armed forces are protected by the Selective Service Act.

The President's appeal was made public on December 8, and reads as follows:

"One of the ways in which we can encourage skilled workers in civilian industry to shift to employment in war plants is to see to it that when victory has been won, employees can return to their peace-time work without loss of all the seniority rights which they have accumulated over the years. . . . . .

"Seniority privileges have become an institution in American industry. This was recognized when the Selective Service Act was passed. It was thought by the Congress only fair that men who gave up their jobs to enter the Army and Navy should have the maximum protection, so that when they returned they could step back into their jobs with a minimum of loss.

"Valuable re-employment and seniority rights are protected under the Selective Service Act. I think the same protection should be accorded to a worker, wherever, possible, who leaves his job to accept employment to help with the war effort, frequently away from home and at times under less favourable conditions. I feel that employers in civilian industries will be willing to give the same assurances to their employees who leave for war work as they are giving to employees who are leaving to join the armed services. By so doing they can perform a great service to the government at this time".

PRICE CONTROL IN CANADA DURING NOVEMBER, 1942

Government Action to Lower Cost of Living by Reducing Retail Food Prices —Activities of Wartime Prices and Trade Board in Controlling Shortages—Conservation—Rationing—Price Regulations —Import Policy

ON December 3, the Minister of Finance, the Hon. J. L. Ilsley, announced the government's plan "to bring the cost-of-living at least part of the way back to the level of the basic period" (September 15 to October 11, 1941) by reducing the retail prices of a number of imported and domestic foods of widespread consumption through reduction of duties and taxes and out-right subsidy. Every consumer will share the advantage of the reduced prices since the commodities selected, milk, tea, coffee and oranges, are foodstuffs commonly used in the average household. Effective December 7, the retail price of tea is reduced by not less than 10 cents per pound, and the price of coffee to the consumer by 4 cents a pound. Retail prices of oranges are to reflect decreased costs to distributors and dealers. Starting on December 16, the retail price of milk is reduced by 2 cents a quart. The Government also instructed the Board to examine the retail prices of beef which, in some instances, are believed to have risen unreasonably in relation to established wholesale prices.

The reduction in tea and coffee prices will be effected by the Commodity Prices Stabilization Corporation. A subsidy is payable to all persons who have stocks on hand for resale at the close of business, December 5. Since the C.P.S.C. is the sole importer of tea and coffee, it is planned to furnish future supplies to retail stores at appropriately reduced wholesale prices. The lower milk price will be made possible by the payment of a subsidy to distributors of milk at retail outlets. In regard to beef prices, the Board is examining the practicability of a Board Order that will fix maximum retail prices for standard retail cuts of beef in proper relation to established wholesale prices.

Supply Problem

Meat.—In order to bring meat supplies throughout Canada under more complete control, all *slaughtering of livestock* for the sale of meat has been placed under permit. After January 1, 1943, persons who slaughter livestock in a slaughter house or other place or have it slaughtered for them, for the sale of meat, are required to obtain a permit. Interim permits are issued by local offices of the Board to all persons making application, and after the applications have been reviewed by the Foods Administration, permits for continued operations may be issued, replacing the interim certificate (A-490, Nov. 23). *Custom Slaughtering* has been brought under control by an order adding it to the list of services regulated by the Board. Provision is also made that maximum prices for custom slaughtering are to be determined by those established during the period October 26 to October 31, 1942, both dates inclusive. (Board Order No. 204, November 3.)

Butter.—With a view to meeting temporary shortages of *butter* in certain retail markets, provision was made for releasing, by the end of the month (Nov. 30), 25 per cent of all stocks of butter held in storage. All holders of butter in excess of 5,000 pounds were required to report their storage stocks at the end of the month, regardless of whether such stocks were held for the dealer's own account or for the account of any other person. (A-483, Nov. 18, revoking A-457.)

Canned Fruits and Vegetables.—Sales of *canned fruits and vegetables* by canners and wholesalers in Canada have been limited to 75 per cent of the stocks in their hands on November 1, 1942, with the remaining 25 per cent being held to the order of the Foods Administrator. The new restriction of sales applied to any fruit or vegetable product, or the juice thereof, packed and preserved in containers of 16 ounces or more; to jam, jelly or marmalade in containers of two pounds or more, and also to fruit for remanufacture in quantities of 30 pounds or more. Exception has been made in the case of a canner who had sold or contracted to the Department of Munitions and Supply 15 per cent of his 1942 pack of canned tomatoes, as provided in Board Order No. 148, June 24, 1942: above this 15 per cent he has been required to retain only 10 per cent of his holdings of canned tomatoes to the order of the Foods Administrator. (A-500, November 28).

Fuelwood.—Anticipating a *fuelwood* shortage in the winter of 1943-44 unless appropriate action is taken, the Board called upon provincial authorities to bring the matter to the attention of the municipalities. The Board pointed out that "it is not possible or feasible for the Board to assume primary responsibility for the supply of fuelwood

throughout Canada; in the main the individual communities must shoulder the burden." The Board suggested that a survey of the supply situation be made as soon as possible, preferably by December 1; that municipal authorities co-operate with the trade by establishing wood yards or by other measures, and that "special action" be taken in districts where such appears necessary.

Coke.—In order to conserve *petroleum coke* for essential industries such as aluminum, electrode and abrasive production, all transactions have been placed under a permit system. Provision has been made that anyone granted a permit to acquire petroleum coke for the manufacture of briquettes for domestic heating may sell such briquettes as long as such sales are reported to the Administrator in any form which may be required. The Board pointed out that substitutes for petroleum coke are available to replace it in domestic use. (A-495, November 25).

Simplification and Conservation

Leather.—Further regulations in the manufacture of leather footwear have been issued, effective November 20. The new regulations were concerned primarily with simplifying methods of production for the purpose of conserving materials and man-hours. In applying the regulations, minor disputes are to be arbitrated by one or more committees known as Committees of Reference composed of one representative of manufacturers and one of retailers or wholesalers.

Leather conservation has been effected by requiring, for civilian purposes, the use of 8½ gauge outsoles, by restricting vamp linings and facings on uppers of 5 oz. and over. Leather linings have been restricted to heavy boots that require a leather quarter lining. The great majority of heels are to be made of wood and will not be leather covered. The colour range in women's shoes has been reduced. A two-tone effect has been prohibited, both by the use of contrasting leather or by the addition of contrasting trim. White colour is no longer available in men's shoes and brown is out for work boots. In addition, novelty variations have been sharply restricted. The use of steel has been prohibited except in the case of steel shanks used in trade-marked arch-support recognized and approved by the Administrator. Certain exemptions from the regulations were made with respect to special types of footwear. Imported shoes, however, must conform with the restrictions of the Order.

The new regulations contained an important provision that no design or construction may be utilized by the manufacturer which had not been utilized by him during the period between October 1, 1941, and the effective date of the Order (November 20). Under a separate Order, manufacturers of leather footwear have been prohibited from installing machinery for manufacturing by a process differing from that existing in their plants on November 26, 1942, except with written permission of the Administrator (A-489, November 21). To assist tanners in producing larger quantities of *sole leather* for military use, manufacturers of leather footwear have been prohibited from putting into process for civilian sale any inner soles or middle soles cut from shoulders of 5 to 8 gauge or iron, or any outsoles cut from bends over 8½ gauge or iron. (A-497, November 26).

Other restrictions with a view to simplification and cost reduction were applied to sales and distribution methods. All shoe boxes must be of uniform sizes, thus eliminating the costly "brand" box. Boxes may be covered only in white or natural kraft paper, while such details as size and description must be affixed to the box in one operation. Manufacturers have been forbidden to supply window samples. Advertising labels must not be attached to shoes, and distinguishing name stamps may not be affixed except when such a mark can be applied in one stamping operation. Shipping on approval and consignment have been prohibited, and all shoe orders must contain a minimum of 15 pairs in two widths or 30 pairs in up to five widths. (A-478, November 13, revoking A-263).

Clothing.—Additional measures of simplification and conservation have been applied to the manufacturer of *women's, misses' and children's wear.* While the previous orders have been revoked, the majority of the restrictions contained in them are maintained in the new regulations with a few revisions and the addition of certain new schedules to cover garments not formerly listed. The manufacture of certain luxury garments such as evening and dinner dresses has been discontinued. Garments, other than women's or children's hats, must not be fashioned in more than four shades. The use of wool cloth to line any garment has been prohibited. The order also prohibited fur trimmings on women's and misses' hats. Restrictions have been placed on overall tucking, shirring or pleating, while double cuffs or yokes have been prohibited except as permitted under the Order. Certain new restrictions have been applied to uniforms for nurses, maids, waitresses and beauticians. Among the garments not formerly listed which were covered by the new Order were sportswear, infants'

wear, boys' wash suits, women's and children's hats, bloomers, brassieres, corsets and scarves. New blocks for women's and children's hats were prohibited, effective January 15, 1943. (A-474, November 11).

In addition to the restrictions placed upon the manufacture of *women's, misses' and children's wear,* new regulations were applied to styling, sale and delivery of such clothing. Styles in general have been "frozen" as of the present fall and winter season, or the spring and summer season of 1943. The style range which had been reduced for the fall season of this year by one-third has been cut to one-half. The number of samples shown by any manufacturer for any season "shall not exceed 50 per cent of the number of samples shown by him for the corresponding season in 1941, and no manufacturer customarily selling by sample shall sell any garment in any style for which he has not shown samples." Sales by manufacturers and wholesalers on consignment or approval have been prohibited. Displays by manufacturers on retailers' premises have also been prohibited. (A-475, November 11).

Paper Products.—With respect to the manufacture of *shipping tags,* specifications have been set out as to size, stock (of paper) and colour (for certain of the stocks). (A-456, November 2). Regulations have been made for the manufacture of *paper bags,* used for various commercial purposes, in fewer sizes and from prescribed weights of paper. In the case of special orders received by a manufacturer for 100,000 bags or more of one type, size, weight and grade which do not conform to the specifications in the Order, the Administrator may, by permit in writing, allow their manufacture. (A-482, November 17).

Glasswear.—The manufacture of *glass* containers for bottling alcoholic beverages has been restricted to the sizes, shape of container and type of closure specified in an Order issued by the Administrator of Glass and Glass Products, and in accordance with such specifications as to style, quality and shape as are approved by the Administrator. (The order does not cover the bottling of beer, ale, porter or stout). (A-472, November 7).

Brushes.—Manufacturers of *paint and varnish brushes* have been permitted to add three popularly priced lines of brushes to the number which may be turned out under the Board's program of standardization and simplification. (A-494, November 25, amending A-197).

Restrictions and Conservation

Heaters, Pumps, etc.—The manufacture of converter *heaters,* preheaters, instantaneous or storage heaters has been restricted to the styles, models and sizes listed as standard in the latest catalogue published by the manufacturer prior to November 19, the effective date of the Order. (A-479, November 16). Similar provisions have been applied to the manufacture of circulating, condensation and vacuum *pumps* by "freezing" the types of pumps at the range shown in manufacturers' catalogues and listing the permitted types of control apparatus. (A-484, November 20). Types and sizes of *surface heating coils* have also been prescribed. (A-485, November 20).

Furnaces, etc.—Manufacture of *humidifiers* for all industrial uses has been prohibited except by written permission of the Administrator (A-486, November 20). The manufacture of *all steel furnaces* (containing more than 50 per cent by weight of sheet or plate steel) has been prohibited except with written permission of the Administrator. Under the permit system, manufacturers are restricted to an annual use of not more than 70 per cent of total weight of iron and steel used in 1941. (A-476, November 11). With respect to concealed and enclosed convector type *radiators,* their manufacture has been prohibited, except for ships or railroad cars, or with permission of the Administrator (A-480, November 16).

Bristles.—Regulations governing the manufacture and sale of *pigs' bristles* in brushes have been further tightened in conformity with new restrictions in the United States. Production of brushes for ordinary civilian uses has been restricted to those containing bristles under two inches in length. Except with written permission of the Administrator, manufacturers have been required to use not less than 50 per cent of material "other than bristles" where the size of stock of bristles is 2 to 3½ inches, and not less than 45 per cent, where the bristles are 3¾ inches or longer (A-493, November 25).

Jewellery.—The use of *platinum and palladium* or their alloys has been prohibited in the manufacture or assembly of various articles of jewellery, effective November 15. The purchases of rhodium or alloys for such use has also been prohibited (A-431, November 11).

Food Choppers.—The manufacture of hand operated or motor driven *food choppers* for household use has been prohibited, while a permit in writing from the Administrator has been required in their manufacture for industrial, institutional or commercial use. (A-471, November 7).

Paper.—An Order issued by the Administrator of Converted Paper Products has prohibited the manufacture of fancy printed or embossed *wrapping paper,* special or standard Christmas wrapping paper, waxed and/or printed, and printed decorative crepe tissues. (A-481, November 17).

Shotguns.—The sale of *shotguns* at wholesale or retail has been prohibited except with permission of the Co-ordinator (of Sundry Items, n.o.p.) (A-459, November 2).

Soaps and Cleaners.—Consumers purchasing bar or packaged *soaps and cleaners* have been assured of getting materials of uniform weight, size and quality as a result of regulations issued by the Administrator of Oils and Fats. Manufacturers have been required to show clearly on the containers the packed weight of their products. The regulations provide that the weight of bars of toilet and laundry soap and bar cleansers may not be changed. Continued quality of output has been guaranteed by a provision forbidding any manufacturer from selling either bar or packaged soaps or cleansers differing in quality from those sold during the basic price ceiling period of 1941 (A-458, November 2).

Toilet Goods.—An Order by the Administrator of Pharmaceuticals and Toilet Goods has prohibited inclusion in gift sets of any tooth cleaning or shaving preparation contained in collapsible metal tubes (A-461, November 3). Simultaneously, the Board passed an order allowing retailers to sell, without exchange of tubes, tooth and shaving preparations when they form part of a gift set purchased by the retailer as such. (Board Order No. 206, November 3).

Typewriters.—The Board tightened up its regulations regarding typewriter sales by restricting the sale of used or rebuilt non-portable machines by independent dealers. In a previous amendment (A-379) to the regulations an independent dealer had been allowed to sell such a machine to users not listed in the priority schedules. Under the amendment issued this month, new, used or rebuilt non-portable typewriters may be sold to Class "B" users (war industries) in the priority schedule, with written permission of the Director, and only typewriters more than 10 years old may be sold without restriction. (A-496, November 26, amending A-194 as amended by A-379).

Building Products.—With a view to eliminating over-competition in deliveries and restricting the practice of over-ordering and returning *materials and supplies for building and construction* purposes, an Order has forbidden delivery by dealers on the same day the order is received of any of the materials and supplies listed in a schedule to the Order. Pickups of supplies and materials have been prohibited except in the course of a lawful delivery. The maximum refund or credit on returns has been at 75 per cent of invoice, except for asphalt base or tar base roofing and siding products, wallboards of wood fibre or asbestos base or building papers, for which 90 per cent credit has been permitted. (A-460, November 2).

Photo Engravings, etc.—In order to level out the peak or rush periods in production of *photo engravings,* electrotypes, etc., an Order provided that after orders are received certain minimum time limits must elapse before deliveries are made. Manufacturers of cuts for news columns of newspapers were exempted (A-487, November 21).

Deliveries.—Restrictions upon the use of both automotive and horse-drawn vehicles in the *delivery of bread and bakery products* become effective throughout Canada on December 28, 1942. Distributors have been prohibited from operating vehicles which do not yield weekly sales equal to or greater than specified minimums ($225 per week for automotive vehicles and $175 per week for horse-drawn vehicles). Exempted from the restrictions were distributors who do not operate more than two vehicles, of which not more than one may be an automotive vehicle. (A-492, November 25).

New restrictions have been placed on *deliveries of ice.* Distributors have been restricted to three deliveries a week to private residences and one each week-day to hotels and commercial establishments. Under the three day a week delivery system one man will be able to deliver in areas formerly served by two. All Sunday deliveries have been abolished and on week-days only regular deliveries may be made. The latter are to begin at a particular time and proceed along a specified route or through a designated area. The three-per-week deliveries to private residences are to be on alternate days except when a regular delivery falls on a statutory holiday, for which certain provisions have been made. (Certain deliveries are exempted from the restrictions, e.g. to hospitals). Both horse-drawn and automotive vehicles have been placed under the delivery restrictions, and distributors have been prevented from increasing the number of motor vehicles over the number regularly used last August. Subject to certain exemptions, no distributor may use an automotive vehicle after December 28, to deliver ice unless the total quantity delivered from it in each week is at least 21,000 pounds. The minimum for a horse-drawn vehicle has been placed at 15,000 pounds.

Consumer Rationing

Tea, Coffee and Sugar.—Early in the month the Administrator of Rationing announced that double rations of tea and coffee would be allowed for soft coal miners working underground in the principal coal mining areas in Nova Scotia, Saskatchewan, Alberta and British Columbia. Special arrangements have been made for distribution, partly in co-operation with organized labour groups. In announcing the double ration the Administrator pointed out that "the work being done by the miners of soft soal is one of great national importance . . . and involves conditions of considerable hardships".

The Rationing Division advised insurance adjusters, trustees in bankruptcy and others having to do with disposal of salvaged tea, coffee or sugar that they must obtain a permit for such sales from the appropriate officer of the Board. (The Directors of tea and coffee, and in the case of sugar, the Sugar Administrator.)

Price Regulations

Mattresses, etc.—During the month several pricing orders were issued covering certain new goods. Manufacturers' prices for *new cotton felt mattresses* must be approved or fixed by the Administrator, with concurrence of the Administrator of the Retail Trade. For retailers the ceiling will be laid down cost plus normal markup, the latter not to exceed 40 per cent of retail selling prices (a new range of quality cotton felt mattresses is replacing spring filled mattresses) (A-470, November 6). Having limited the number of types (basic construction) of *wood frame bed springs* and studio couches and metal frame beds with composite panels and wood side rails, applications for price fixing must be made to the Director of Bedding showing proposed selling price, comparison with former products as to ability, etc. On the basis of the application and Director's recommendation, maximum selling prices are to be fixed by the Deputy Administrator of Supplies, with concurrence of the Administrator of the Retail Trade. Retailers' maximum prices are to be the sum of the actual price paid and a normal markup, the markup not to exceed 40 per cent of the retailer's selling price (A-498, November 28).

Bicycles.—Specific ceiling prices have been established at the retail level for wartime *bicycles,* following an order issued last May by the Controller of Supplies which required that all bicycles must be built to certain specifications. Prices were determined after a comparative study of the prices at which bicycles were sold during the basic period (A-463, November 4).

Skates.—A price formula for manufacturers of *nu-chrome skates* and for wholesalers and retailers selling these products was issued by the Administrator of Footwear. Manufacturers were required to submit a statement showing details of cost and proposed selling price. Dealer's maximum selling price must not exceed the sum of laid down cost and basic period markup, the latter not to exceed 15 per cent and 35 per cent of selling price for wholesalers and retailers respectively (A-464, November 5).

Clothing.—Manufacturers of *women's, misses' and juniors' coats, suits or sport jackets* to be offered for sale at retail during spring and summer of 1943 may be authorized to increase by not more than 10 per cent the price at which they sold the same type of garment produced for the 1941 season. Although this increase was provided for in an Order issued last April (Board Order No. 115, respecting seasonal goods), manufacturers did not take advantage of it because they were in a favourable inventory position. (A-462, Nov. 6). Manufacturers of *men's and boys' caps and suspenders* have been authorized to make a uniform charge in addition to their maximum selling prices for caps sold in small quantities and for special large sizes of caps and suspenders. (A-469, Nov. 6).

Potatoes.—Maximum wholesale and retail prices for *potatoes* in all parts of Canada will be the highest lawful prices at which potatoes were sold in the period November 1-10, 1942. In announcing the Order, the Board's statement declared "that its new order became necessary as a result of recent sharp increases in potato prices". (Board Order No. 205, Nov. 11).

Eggs.—Specific price differentials between various grades of *eggs* were established, covering the period from November 23, 1942, to January 31, 1943. By a previous Order (No. 178), maximum wholesale prices were set in 11 principal Canadian markets for Grade "A" large eggs, and these continue in force under the new Order. A charge of two cents a dozen above the maximum wholesale price for the particular grade may be added to the prices set when eggs are packed in cartons containing a dozen or half-dozen eggs.

Fuelwood.—Several additional orders were issued covering *fuelwood* prices in certain centres. For the cities of Fort William and Port Arthur, Ontario, the maximum delivered price per cord was set for seasoned fuelwood, and also maximum prices for fractions of a cord when ordered by the purchaser. Maximum prices for slabs, edgings or millwood were to be those prevailing in the period December 1-15, 1941 (F-50, Nov. 18). Several minor amendments were issued with respect

to maximum prices for fuelwood in Greater Toronto area and the city of Hamilton, Ontario (F-51, Nov. 10); maximum prices for dry fuelwood in the Province of Manitoba (F-54, Nov. 18); maximum prices for fuelwood in the City of Saint John and certain districts in New Brunswick (F-52, Nov. 23); and sawdust and millwood in Vancouver area, British Columbia, F-53, November 18).

Photographic Equipment.—The maximum price for all types of *used cameras, binoculars, lenses and photographic equipment in general* has been fixed at 100 per cent of list price. In issuing the Order it was pointed out that in many cases used cameras, etc., had been selling for more than new ones had formerly brought because new goods were not being manufactured and there was a good deal of competitive bidding for the used goods. In an accompanying schedule the Order listed maximum prices for different kinds and types of used cameras, representing in general the last quoted retail selling prices for new goods during the basic period September 15 to October 11, 1941. Used binoculars, used lenses and used photographic equipment not listed in the schedule may not be sold at a price higher than the last quoted retail selling price as shown on manufacturers' or dealers' price lists. (A-477, Nov. 12).

Import Policy

The Board has added a number of imports to the list of commodities excluded from subsidy or ineligible for subsidy unless, prior to importation arrangement has been entered into with the Commodity Prices Stabilization Corporation. The changes were by way of amendment to the schedules which accompanied the Board's Statement of Import Policy on July 13, 1942. Added to the list of tariff items excluded from subsidy (section 1 of Schedule "B") were prunes, and cleaned rice when imported by manufacturers of cereal foods for use in the manufacture of cereal foods in their own factories. Added to the list of goods eligible for subsidy only if, prior to importation, an arrangement respecting subsidy has been entered into with C.P.S.C., were the following items: Starch, dextrine, etc.; moulding compositions and other primary forms of pyroxylin, cellulose nitrate, etc.; common and colourless window glass; cane and rattans, osiers or mullions and bamboos—unmanufactured; and button blanks and ivory nuts.

I.L.O. REVIEW OF INDUSTRIAL RELATIONS IN WARTIME

INDUSTRIAL Relations and the Determination of Conditions of Employment in Wartime is the title of a comprehensive and timely article in the International Labour Review, November, 1942. After outlining the problems affecting industrial relations which arise in a war economy, the author points out the modifications which appear to be necessary in connection with collective bargaining, the adjustment of wages and the settlement of disputes.

The review of earnings which were revealed by a study made by the British Ministry of Labour and National Services and of wage rates in the United States leads to the statement that

> "it would appear that while trade union action can help certain privileged groups of workers to benefit by an increase well in excess of the cost of living, others may experience a substantial decline in the purchasing power of their wages."

The experience of the various Allied countries suggests to the author certain principles on which an industrial relations policy may well be based: (1) A general agreement for collaboration between the central workers' and employers' organizations on the one hand and the Government on the other; (2) the regulation of wages and conditions of employment for whole industries either through collective agreements or through arbitration awards; (3) the voluntary renunciation of strikes and lockouts and the submission of all labour disputes to conciliation and arbitration; and (4) the formulation by Government authorities or by law of certain principles of wage policy which are to be observed by industry and labour in their agreements and by the conciliation and arbitration authorities.

The application of these principles in different countries must vary, of course, with the extent to which employers and workers are organized and with the framework of legislation and customs into which they have to be fitted. Where there is a unified labour movement covering a large proportion of industry and similar organizations of employers, a national industrial relations policy, it is found, can be more readily formulated and applied. The Government is able to count on these organizations to assume responsibility for playing a part in framing and carrying out national production plans.

As regards collective agreements, the writer of the article points to the action taken by a considerable number of countries to give to agreements the force of law and to make it possible to extend them on certain conditions to the whole of the industry or the occupation

concerned. The legal enforcement of agreements and their extension to third parties had been provided for by law before the war in Austria, Bulgaria, Czechoslovakia, Denmark, Finland, France, Republican Germany, Greece, Ireland, Italy, Luxemburg, the Netherlands, Norway, Poland, Portugal, Rumania, Spain, Sweden, the U.S.S.R., several Australian States, New Zealand, South Africa, Brazil, Chile, Cuba, Morocco and other countries. New labour codes or draft codes containing such provisions have been drawn up in the Argentine, Bolivia, Colombia, Ecuador and Venezuela. The generalization of agreements under statutory authority is also provided for in the Province of Quebec under the Collective Agreement Act. In both Great Britain and the Commonwealth of Australia the Government in 1940 provided in an emergency measure for the extension of collective agreements to non-parties so that the whole industry or occupation covered by the agreement would be bound by its terms. In all these countries, of course, it is required that before an agreement may be extended, a substantial proportion of the industry must have entered into it voluntarily.

Other parts of the article summarize the more important changes in conciliation and arbitration machinery that have been made to speed up settlement and prevent work-stoppages during the war and the policies that have been adopted in certain countries for the regulation of wages and other conditions of employment.

In the United States and South Africa, as in Australia and New Zealand, there is compulsory arbitration and strikes and lockouts are prohibited. In Australia the powers of the Commonwealth Conciliation and Arbitration Court have been extended to cover all disputes, not merely those extending beyond the borders of a State; in New Zealand strikes and lockouts are again prohibited and decisions of emergency disputes committees as of the Court of Arbitration are binding on the disputants; in South Africa and the United States arbitration has been made compulsory since the outbreak of war. In Great Britain any dispute must be reported to the Minister of Labour and National Service who may refer it to the National Arbitration Tribunal if the parties fail to settle it and there may be no stoppage of work until three weeks have elapsed after it has been reported and unless the Minister has not, within that period, referred the dispute for settlement. The National Arbitration Tribunal's decisions bind the parties.

As regards wages, the writer states:

> The main object of any wage policy in wartime is of course to stabilize wage rates at a particular level, since what is desired is precisely to prevent a continued and uncontrolled rise in the price of labour (an essential factor of the cost of production) from leading in the long run to inflation and therefore to disorganization of the war production program.
>
> The stabilization of all wage rates has been imposed by law in Australia, Canada, and the United States. In Great Britain it has been made possible in practice by strict measures of indirect control (price control, rationing, taxation, voluntary savings, etc.) and by the discipline to which the workers' and employers' organizations have submitted of their own accord. But in no country has the stabilization of wage rates meant the freezing of wages for the duration of the conflict. In point of fact, all the national regulations provide for the necessary correctives to alleviate the strict application of the principle, in particular, in the case of the lowest paid categories of workers. Furthermore, certain exceptions are allowed in order that the wage system may continue to act as an incentive to output and thus play an active part in the war production policy.

Thus, provision is made for increasing wages which are below the subsistence level or which are low when compared with rates in the same or a similar area, occupation or industry. Further, wages may be adjusted to the cost of living, and, to stimulate war production, there may be, as in Canada, new classifications of workers, a change-over from time to piece rates, or other adjustment, or, as in Australia, increases for special skill or output. In Canada and the United States the principle of equal pay for equal work irrespective of sex has been accepted.

NATIONAL SERVICE FOR WOMEN IN GREAT BRITAIN

As many men as possible must be available for front line duties in the Armed Forces, according to a report in the October issue of the British *Ministry of Labour Gazette*. This means that many more women must be recruited for the Women's Auxiliary Services to undertake duties for which men would otherwise have to be used, but in which women have shown themselves able to take the place of men.

The compulsory powers of the National Service Acts are being used to provide a number of the additional recruits wanted (LABOUR GAZETTE, February, 1942, page 193). These Acts do not apply, however, to married women, nor are they used to compel a woman to join the Forces who prefers to take one of the vital jobs in industry. So far, the age classes from 1918-1921 and the older half of the 1922 age class are included in the compulsory call-up; further age classes will probably be included later, but at the moment a concentrated effort is being made to secure the release from their existing work

of more women within the present call-up age classes. The position therefore is that the compulsory call-up is yielding recruits from among single women born between January 1, 1918, and June 30, 1922, provided they do not prefer factory work, but not from women born outside those age limits nor from among married women. Accordingly, the field for recruits under the National Service Acts is comparatively small, and outside it there is a much larger field of women for whom there is no compulsory call-up but who are eligible to volunteer.

The Women's Auxiliary Services have always been and still are, in the main, volunteer forces. The recruitment of these Services up to the necessary complements depends very largely upon volunteers. Even since the extension of the National Service Acts to women the number of volunteers has consistently been larger than the number of women called up under the National Service Acts. During the past six months the number of volunteers has been double the number called up, but the rate has dropped and the balance must be restored. Now that there is a call for a large increase in recruitment for the Women's Auxiliary Services the call must be answered in two ways, viz., (1) by increasing as much as possible the number of women called up from the field covered by the National Service Acts, and (2) by an increase of volunteering from that much larger field to which the calling-up arrangements do not extend.

In the past, numbers of women who wanted to volunteer have not been accepted because it was felt that their civilian work was too important. The needs of the Women's Auxiliary Services, however, have now grown more urgent and many of these women and others in like positions will now be accepted. Women in reserved work who wish to volunteer will be accepted for the Women's Auxiliary Services if their employers are willing to let them go, and it will be quite exceptional for any women not in reserved work to be refused permission to volunteer. Women may join the Service they prefer, subject to a certain proviso with regard to the W.R.N.S. in the case of the National Service age group, and so far as this can be arranged, they may follow the trade they choose, except that for certain types of work special qualifications are needed. Volunteers are wanted in the largest numbers for the following: A.T.S.—Anti-aircraft, signals, driving, special operations, radio mechanics, cooking, orderly work, camouflage; W.A.A.F.—Cooks, motor drivers, balloon operators, aircraft hands, clerks, flight mechanics, mess stewards and waitresses, radio operators. Women in the 20-24 age group can be considered for the W.R.N.S. only if they possess one of the seven special reasons or qualifications agreed between the W.R.N.S. and the Ministry of Labour. This ensures that only a certain proportion of the women in the National Service age group will be allocated to the W.R.N.S., which is the smallest of the three Women's Services.

Pay depends on the type of work done, length of service, and rank. The lowest rate is 2s. a day, all found. Wives of servicemen are granted their leave to coincide with their husbands' leave, subject to Service exigencies.

LABOUR AND INDUSTRY IN ONTARIO, 1942

Report of Provincial Department of Labour Reflects Increased Industrial Activity—Deals with Employment, Industrial Disputes, Accident Prevention, Wages and Hours, etc.

UNPRECEDENTED gains in industrial employment in Ontario, due to the gathering momentum of the war effort, were reported by the provincial Department of Labour in its twenty-third report covering the fiscal year ending March 31, 1942. Employment was up almost 25 per cent over the previous year's total, the index number registering an average of 167·6 for the year, compared with 135·0 for the year preceding (1926=100). Though expansion was general in all industries covered by the report, it was specially marked in the manufacturing industry as a whole, with employment increases being greatest in the iron and steel division.

Industrial Disputes.—The number of strikes reported in Ontario during the fiscal year 1942 totalled 109, in which 28,690 workers were involved with a time loss of 298,393 man-working days. In the previous year there had been 55 strikes, involving 9,188 workers with a loss of 36,318 days, the smallest time loss due to strikes since 1925. One strike in the mining industry caused more than 45 per cent of the total time loss, or 136,000 days.

The predominant cause of strikes concerned wage increases or cost of living bonuses, there being 41 strikes for this cause alone, while wage increases figured among other demands in 34 strikes. Union recognition was the sole cause of 6 strikes, and figured among other demands in 25 strikes.

Approximately 18 per cent of the workers in all disputes were successful in their demands,

31 per cent were partially successful, and 14 per cent were involved in strikes settled in favour of employers. The remaining 37 per cent of the workers were involved in strikes which resulted in work being resumed pending negotiations or reference to a Board.

There was a great increase in the number of cases handled by the conciliation officers of the Department during the year. One reason for this increase was the number of cases referred to them for investigation and mediation by the Regional War Labour Board established under the terms of what is now known as the Wartime Wages Control Order. Another reason was the fact that, due to the co-ordination of the functions of the Ontario and federal Departments of Labour, the federal conciliation officers in this Province operated under the direction of the Ontario Department of Labour.

War Emergency Training Program.—During the second year of operation the Dominion-Provincial War Emergency Training Program extended its scope to meet the needs of changing conditions. Two new developments in the training for industry plan were the part-time classes which gave advanced training to 1,835 promising employees, both men and women, in order to make possible the up-grading of these employees, and the inauguration of authorized plant schools to give advanced training on machines and equipment not available in other training schools. Three such schools were authorized during the last month of the fiscal year.

Arrangements were made, under agreement with the Department of Pensions and National Health, for the rehabilitation training of discharged men. Such classes have already been established and plans are being completed for taking care of large numbers of ex-service men as soon as required.

During the year pre-employment and pre-enlistment classes were brought under the Workmen's Compensation Act, so that trainees will receive benefits in case of accident.

Volunteer Farm Workers.—In April, 1941, an Interdepartmental Committee of representatives of the Departments of Education, Agriculture and Labour was appointed to deal with the problem of farm labour shortage. A plan was formulated for enrolling in the Farm Service Force of Ontario secondary school students and all young men and women willing to volunteer for this national service. The administration of the plan was undertaken by the Department of Labour.

The young men placed on farms usually lived with the farmers for whom they worked and the young women lived in camps equipped by the Government and supervised by the Young Women's Christian Association. There were ten of these camps in the Niagara District, where 1,120 girls were employed in fruit picking and other farm work, and one fruit picking camp for 120 boys. Many workers went out daily from the towns and cities for farm work, being called for and returned morning and evening by the farmers.

The objective for the season was the placement of 10,000 volunteer farm workers but the total amounted to 22,860 and a magnificent service was rendered by these workers in conserving the farm products of the Province.

Employment Service.—The Ontario Government Offices of the Employment Service of Canada were taken over by the Dominion Government on August 1, 1941, pursuant to the Unemployment Insurance Act. For twenty-three and a half years these offices formed an important link in the chain of Employment Offices across Canada, and during their operation 3,378,637 placements were made.

Factory Inspection.—During the year, 29,343 inspections were made by members of the Inspection Branch. This total was 2,624 fewer than had been made the previous year, the inspectors spending a greater proportion of their time in the large firms engaged in war production. It was stated in the report of the Factory Inspection Branch that priority of inspection is given to known hazards where accidents have occurred, or are most likely to occur.

Such hazards in plants are followed up closely by a repeat visit of the inspector, and all mechanical accidents reported are investigated as soon as possible in order that repetition may be averted.

Repeat visits on less urgent matters have been reduced and a great deal of follow-up on instructions of the inspectors has been handled by correspondence with an encouraging measure of success. It has also been found advisable to curtail the inspection services within the Department on what might be considered matters of minor importance in order to utilize the maximum efforts of the inspectors in the all-important sphere of accident prevention and maintenance of satisfactory working conditions in war industry.

The number of accidents reported to the Branch showed a marked increase during the year, and in this connection the report stated: "The upsurge in accidents, both fatal and lost-time, follows the curve reported during the similar period in the last war, and presents one of the major problems of the war effort of this country. All the skilled operators have been absorbed in industry long since, and operators taken on now and in the future

will be those who have had short courses of training or who belong to the 'green hand' class. Therefore, if the maximum war effort is to be developed, these employees must be protected until they become skilled workers able to carry their full load in war industry. They must be made fully conversant not only with the production possibilities of their machines, but with the accident probabilities as well. While adequate guarding may cut down production to a certain extent, it is of paramount importance in these days to ensure that workers are kept safe to remain in their places on the production line."

Concerning industrial diseases the report declared: "The danger of industrial diseases continues to be a real problem owing to the increasing use of harmful chemicals, particularly in munition plants. The Industrial Hygiene Branch of the Department of Health has again assisted us in coping with this problem."

Hours of Labour.—Due to the pressure of war production, it was stated, double and triple shifts are becoming more and more necessary. The numbers of overtime permits and double shift permits for female workers have increased greatly, and overtime permits now are issued to cover a month or more, instead of a single night as formerly. "This Branch," declares the report, "realizes the strain under which manufacturers are working to maintain and increase production, with the prevailing shortage of skilled operators and materials, and the factory inspectors are instructed to be reasonable in their recommendations for changes in factories. It has been proved, however, that excessive hours of work over an extended period result in reduced production and that satisfactory working conditions and adequate guarding of machinery improve the workers' morale and thus make for greater production."

Child Labour.—There were more cases of child labour during the year, and the report predicted that as available man-power in the Province is absorbed into military and industrial life this problem will become more and more acute. The strictest adherence to the law, which prohibits the employment of children under 14 years of age, in industrial and commercial establishments, is being enforced.

Plans for Buildings.—The Examiner of Reports and Designs approved of 993 plans for new factory, shop and office buildings, or additions and alterations to such buildings. In all large new factory buildings adequate provision is made for the dispensation of medical services, and satisfactory arrangements were made with many firms to make similar provision either in new additions or by altering the floor areas in existing buildings. The total estimated construction cost amounted to $34,224,030, or an increase of $4,785,730 as compared with the previous year. This total is nearly three times that of 1940 and over four times that of 1939.

Legislation.—Three of the Acts coming under the jurisdiction of the Minister of Labour were amended at the 1942 session of the Legislature of Ontario.

Several amendments were made to the Workmen's Compensation Act for the purpose of clarifying the law and practice of the Workmen's Compensation Board.

The sections dealing with compensation for permanent disability were redrafted to make it clear that the Board is to estimate the impairment of earning capacity from the nature and degree of the injury rather than from the difference in average earnings before and after the accident, but may use the latter method if it deems it more equitable. The Board is to fix a sum as compensation proportionate to such impairment but not to exceed 66⅔ per cent of the workman's average earnings during the previous twelve months, if he has been so long employed or, if not, then for any shorter period during which he has been in the employ of his employer. Compensation is to be a weekly or other periodical payment during the lifetime of the workman, or for such period as the Board may fix, and is payable even if the workman is not disabled for seven days from earning full wages.

The provision debarring a workman from compensation for an industrial disease unless the disease was due to the nature of employment in which he was engaged at any time within twelve months previous to the date of his disablement, was abolished.

Amendments were also made to the Factory, Shop and Office Building Amendment Act (revising the elevator section of the Act) and to the One Day's Rest in Seven Act.

Industry and Labour Board

The Industry and Labour Board administers the Industrial Standards Act, the Apprenticeship Act and the Minimum Wage Act.

Industrial Standards Act.—Seven schedules pursuant to the Industrial Standards Act were approved, of which one was a new schedule and six were renewals. At the close of the fiscal year, 101 schedules were in effect.

Arrears of wages of 204 employees amounting to $3,490.19 were collected from 54 employers. Of this amount the sum of $534.74 was diverted to the Crown with the approval of the Industry and Labour Board. There were 23 prosecutions during the year, resulting

in 18 convictions, and 5 cases withdrawn. Fines amounting to $171 were imposed.

Apprenticeship Act.—The numbers of apprentices registering in the designated trades have been decreasing since the beginning of the war, due to enlistments and the demand for workers for munition plants and other war enterprises, to whom are paid wages higher than those paid to apprentices. During the fiscal year 1942 a total of 333 apprentices registered, 108 of whom were in the building industry, 113 in the motor vehicle repair trade and 112 in barbering and hairdressing. The apprentices completing their training during the year numbered 360, cancellations of contracts 170, and the number of apprentices still in training at the end of the fiscal year totalled 1,123.

Employers' and employees' organizations in the construction industry have been giving serious consideration to methods of meeting the shortage of apprentices in the building trades. The various restrictions on the use of automobiles have resulted in unsettled conditions in the motor vehicle repair trade, and have affected the registration of apprentices.

Numerous inquiries have been received from employers outside the designated trades concerning organized apprenticeship and many firms are entering into contracts of apprenticeship and others are considering the matter.

Minimum Wage Act.—The wage returns submitted to the Minimum Wage Branch by 16,264 employers showed a marked increase in the numbers of persons employed. Employees reported totalled 631,631, as compared with 535,906 the previous year. Almost two-thirds of this increase of 95,725 were female workers.

As a result of the checking of these wage sheets, increased wage rates were ordered for 968 employees in 637 establishments, as compared with 1,504 employees in 869 establishments the previous year. Arrears of wages amounting to $7,432.17 were collected from 202 employers on behalf of 345 employees, as compared with $15,332.19 from 372 employers on behalf of 738 employees in 1941.

Four charges were laid against three employers, as compared with 22 charges against 17 employers in 1941. Three of these charges were withdrawn after the payment of arrears of wages amounting to $83.86, and one conviction was registered and a fine of $10 imposed.

Detailed statistics are given in the report dealing with wages and hours in various industries.

WAR EMERGENCY TRAINING PROGRAM

Statistical Summary for November, 1942

ON November 30, 1942, a total of 20,691 persons were receiving training under the Dominion-Provincial War Emergency Training Program. When compared with the total number in training on November 30 of last year, this represents an increase of over 7,000 trainees.

Of those training on November 30 this year, 4,578 were attending full-time Industrial classes, while 4,553 were receiving part-time instruction.

There were 9,495 members of the Armed Forces receiving instruction under the program. Of this total 6,374 were attending R.C.A.F. courses, 2,221 were following Army classes, while 900 were in Navy classes.

In Plant Schools 1,400 individuals were receiving full-time training. In addition to those who were being trained on a part-time basis in classes held in Vocational Schools, 478 persons were receiving part-time training at other centres.

The Rehabilitation classes for the training of men who have been honourably discharged from His Majesty's Forces had an attendance of 187 on November 30, 1942.

During November this year, 8,316 new enrolees were admitted to the classes. This represents a substantial increase over the numbers who commenced training during November, 1941, when the total was 5,668.

Of the 2,588 persons who commenced training this November in the full-time Industrial classes being held in Vocational Schools, 1,410 were women. A total of 873 new enrolees entered the approved Plant Schools of whom 459 were women.

During November, 1942, 2,420 trainees who had been enrolled in the full-time Industrial classes, completed their training and were placed in employment. Of this total 1,063 or about 43 per cent were women.

From the approved plant schools 320 men and 357 women completed their training during the month, while 27 men and 23 women were placed on production before completing their courses.

As pointed out in previous issues of the LABOUR GAZETTE with the reduction in the available supply of male trainees women have been enrolled in War Emergency Training

Classes in increasing numbers. On November 30, 1941, there were only 655 women in training under the Training Program. On November 30 of the current year, there were 3,449 women enrolled under the War Emergency Training Program. Of this number 1,912 were enrolled in full-time Pre-employment Industrial Classes, 917 in part-time classes, while 620 women were receiving training in Plant Schools being carried on by industry in co-operation with the War Emergency Training Program. During the month of November, 1942, a total of 2,140 women were admitted to training under the War Emergency Training Program, as compared with 767 women admitted to training classes during the month of November, 1941. In November, 1941, 371 women trainees in full-time Pre-employment Classes were placed in employment, while during the same month in 1942, 1,063 women from the full-time Pre-employment Classes were placed. In addition 446 women in Plant Schools and part-time classes completed their training during November, 1942. There were no women enrolled in either part-time classes or Plant Schools in November, 1941.

In addition to training workers for war industry and the armed forces, Vocational Training is being provided under the War Emergency Training Program to discharged members of the armed forces who are referred to the program by the Department of Pensions and National Health. Under the Post-Discharge Rehabilitation Order of the Department of Pensions and National Health, provision is made whereby certain allowances may be paid to discharged men by that Department, while they are undertaking Vocational Training or completing interrupted education. To avoid any duplication of facilities, arrangements were made to have the Vocational Training of discharged members of the armed forces provided under the War Emergency Training Program.

As above mentioned, the selection of the discharged members of the armed forces to be given training is made by the Department of Pensions and National Health, but officials of the War Emergency Training Program work very closely with the District Veterans' Welfare Officers. Committees have been set up across the country on which are included representatives of the War Emergency Training Program and Veterans' Welfare Officers to review cases of discharged members of the forces referred for Vocational Training, and to advise on the type of training most suitable.

So far there have not been a great number of discharged men referred to the program for training due to a large extent to the existing employment opportunities. Since April 1, 1942, a total of 791 discharged men have been enrolled in Rehabilitation Training Classes, while 187 were under training in these classes at the end of November, 1942. Owing to the small numbers involved, special classes have not as yet been established for Rehabilitation Training. These men are being enrolled in existing classes carried on under the program. However, facilities are available to establish special Rehabilitation Classes when the number of discharged members of the forces requiring Vocational Training justifies this step.

The responsibility for securing employment for discharged members of the armed forces on completion of their training rests with the Department of Pensions and National Health and the Employment Offices under National Selective Service, but wherever possible the War Emergency Training Program has given assistance in locating suitable employment through its field representatives. From April 1 to the end of November, 1942, 386 men from Rehabilitation Classes have been placed in employment. During the same period 157 rehabilitation trainees left the classes before completing their training. A great majority of these left the classes to take available employment.

The Training Branch has in preparation a new Foreman Training unit which is to follow the first two units which have already been made available to war industries, namely, Job Instructor Training and Job Relations Training.

The new unit will be called Job Methods Training. This has to do with the principles of job simplification.

It is anticipated that in view of the increasing scarcity of man-power and the demand being made on war industries for continuously increasing output that this new unit will be of extreme interest both to management and labour interested in providing maximum output to back up the men in the front line.

This is not a "speed up" program but rather one concerned with the elimination of waste effort and the discovery of methods by which this objective may be attained.

The new program should be available in the latter part of the winter. Companies with engineering, production planning, time and motion study divisions will be particularly interested in this development.

(1) Trainees in Part-time Classes consist largely of employed persons who are being given training at the request of employers in war production who wish to up-grade their employees.
(2) Includes those graduates who, though actually placed prior to November 1, 1942, were not so reported until after November 1, 1942.

RECENT REGULATIONS UNDER DOMINION AND PROVINCIAL LEGISLATION

Collective Bargaining—Selective Service Powers—Labour Supply Measures — Job Instructor Training — Seamen — Housing — Unemployment Insurance — Manitoba Electrical Standards — Quebec Stationary Engineers — Miners and Minimum Wages in Alberta and Quebec — Saskatchewan Teachers' Pensions.

THE right of employees of "Crown Companies" to join trade unions and to bargain with the employer through their unions has been established. The Director of National Selective Service has been given control over the Unemployment Insurance Commission. Recent labour supply measures include Orders establishing control over the employment of university science students, fixing wage rates on certain communication projects in British Columbia and Manitoba, authorizing special allowances for workers who will construct the synthetic rubber plant at Sarnia and establishing an Emergency Coal Production Board. An extension of the Job Instructor Training Program has been authorized. Relaxation of the Load-Line Rules for Canadian ships has been permitted in order to secure more cargo space, and additional regulations regarding life-saving appliances were issued. Steps have been taken to make more effective the enforcement of discipline in manning pools and training centres for merchant seamen. A Committee to co-ordinate the work of the Government departments and agencies concerned with housing has been established. The occupation of life insurance agent has been declared non-insurable under the Unemployment Insurance Act.

In the provincial field, Alberta has revised its minimum wage Orders relating to women workers and has authorized the issue of emergency coal miners' certificates to meet the shortage of qualified miners. Manitoba has issued regulations regarding standards for electrical work and Quebec has amended its safety and electrical regulations for mines and quarries. Quebec has also renewed five minimum wage Orders and revised its regulations relating to stationary engineers. Saskatchewan has issued regulations for the administration of its Teachers' Superannuation Act, 1942.

Dominion

Collective Bargaining in Government-Controlled Plants

Persons employed by a "Crown Company" are declared by an Order in Council of December 1 (P.C. 10802) to have the right to join trade unions and to bargain with their employer through representatives employed by the company and chosen by the union to which belong the majority of the employees in the plant or plants or in any department of the plant or in any trade or craft employed in the plant. The representatives may be accompanied during the negotiations by other representatives of the union who are not employed by the company.

Disputes between such companies and their employees are brought within the scope of the Industrial Disputes Investigation Act but disputes concerning representation may be determined by the Minister who may refer them to an Industrial Disputes Inquiry Commission.

Dismissal of, or discrimination of any kind against a trade union member is forbidden, and also interference by the employer in the affairs of the union.

The text of this Order in Council is published elsewhere in this issue.

67746—6

Control of Employment Service and Unemployment Insurance by Selective Service Director

The Director of Employment Service and Unemployment Insurance and the other officers and employees of the Unemployment Insurance Commission were brought under the Director of National Selective Service by an Order in Council of October 16 (P.C. 9466) passed under the War Measures Act and gazetted November 14. The Order also provides for the appointment of an Associate Director of National Selective Service—Civilian who will assist the Director in administering the National Selective Service Regulations (LABOUR GAZETTE, September, 1942, p. 1020) and in supervising the officers and staff of the Unemployment Insurance Commission.

Job Instructor Training Program

An extension of the Job Instructor Training Program (LABOUR GAZETTE, 1942, May and November, pp. 504, 1239), begun last spring to provide instructors to train supervisors in Canadian war plants, has been authorized by an Order in Council of October 28 (P.C. 22/9776) under the War Appropriation Act which allots a further sum for this project.

Labour Supply for Constructing Synthetic Rubber Plant

To secure labour for construction of the plant of the Government-owned Polymer Corporation which is to produce synthetic rubber, National Selective Service Officers have been authorized to arrange for the payment of prospective workers' travelling expenses to the site and for supplementary living allowances not exceeding $5 a week to persons who must maintain two domiciles because of employment on the work. The Order in Council (P.C. 10088), passed November 10 under the War Measures Act, states that these payments are subject to such conditions as may be prescribed by the Director of National Selective Service. Payment of supplementary allowances of various kinds was authorized by the National Selective Service Regulations (LABOUR GAZETTE, September, 1942, p. 1020). Loggers in the Queen Charlotte Islands were granted supplementary living allowances by an earlier Order (LABOUR GAZETTE, October, 1942, p. 1173).

Emergency Coal Production Board

To stimulate the production of coal an Emergency Coal Production Board has been set up under the Minister of Finance by an Order in Council of November 23 (P.C. 10674). See p. 1404 of this issue.

A subsequent Order in Council (P.C. 10726, November 24) authorized Canadian Collieries (Dunsmuir) Ltd., operating mines at Nanaimo and Cumberland on Vancouver Island to pay the wage rates specified in Wage Agreement Supplement No. 7 conditionally agreed upon by the Company and its employees on November 16. The Emergency Coal Production Board was directed to investigate conditions of coal production in the area, advise as to the desirability of continuing operation of these mines, adopt measures for stimulating production, examine the financial ability of the Company to pay the increased wages and recommend what financial assistance, if any, should be granted to the Company by the Government.

British Columbia and Manitoba Communication Projects

Wage rates of contractors extending communication systems under the direction of the Department of National Defence for Air in British Columbia and the United States Army Signal Corps in Manitoba have been fixed for certain occupational classifications by Orders in Council of August 5 and November 6 (P.C. 1/6956 and 9899) passed under the War Measures Act. This step was considered necessary "in the interest of industrial peace and the early completion of the project". Contractors undertaking work on these projects in either province must pay the following hourly rates: groundmen, 60 cents; linemen (second class), 75 cents; linemen (first class), 90 cents; cooks and truck drivers, 65 cents. Time and one-half is to be paid for all hours over 44 a week. Foremen are to receive $190 a month plus board and supervisors, $220 a month with board.

If an employer was paying higher basic rates on November 15, 1941, or was subsequently authorized by a War Labour Board to pay higher rates, he is not to reduce his rates. If his rates are lower, however, he may increase them in conformity with this Order, but only for the duration of his contract for these projects.

Life-Saving Appliances for Seamen

Three sets of "Additional Regulations" prescribing special measures for the protection of crews and passengers on merchant ships in wartime were issued on May 26, July 6 and July 31, 1942, under authority of an Order in Council of May 4 (P.C. 3638) (LABOUR GAZETTE, August, 1942, p. 925). Additional Regulations No. 1 of May 26 were supplementary to regulations passed in 1937 under the Canada Shipping Act and related to life-saving appliances. They in turn have been supplemented by Additional Regulations No. 4 issued November 17, 1942.

The new regulations were made in order that Canadian legislation on this subject might be brought, as far as feasible, into line with the terms of a resolution adopted by the Joint Maritime Commission of the International Labour Organization at its meeting in London on June 26 to 30 (LABOUR GAZETTE, August, 1942, p. 882). Like the Additional Regulations No. 1, they apply to all ships of Canadian registry of more than 500 tons gross tonnage which are engaged in foreign or home-trade voyages except coastal trade.

All these ships must carry one or two life-boats in addition to those already required and two of the life-boats must be approved motor life-boats with fuel for a voyage at full power of at least 160 miles. A minimum size is specified for life-boats in all new ships and additional requirements are made for davits and life-lines and for emergency life-rafts. There are also additional requirements regarding the equipment to be carried on life-boats and life-rafts. Ships which lack stowage space for all the emergency life-rafts required by the No. 1 Regulations may carry approved buoyant apparatus, the equipment for which is set out. There are also special requirements for oil tankers to protect the crew and the life-saving equipment in case of fire.

Load-Line Rules for Canadian Ships

To secure more cargo space, deeper loading of ships of Canadian registry than is authorized by Load-Line Rules issued under the Canada Shipping Act in 1937 has been permitted by four Orders in Council under the War Measures Act.

The Load-Line Rules of December 18, 1937, which apply to home-trade and foreign-going ships not operating on lakes or rivers are based on an International Load Line Convention which was adopted in 1930 by 30 countries, and to which Canada is a signatory. By an Order in Council of October 8, 1941 (P.C. 7816) Canadian ships subject to the Convention may now be loaded to limits specified in the Order but their load-line certificates must be endorsed by the authority issuing such certificates to indicate the extent to which the international standards have been modified, and the authority may require necessary structural alterations. The Order also makes a declaration that ships of any other country signatory to the Convention bearing similarly endorsed load-line certificates will receive the same treatment as regards deeper loading in Canadian ports as Canadian ships receive in that country's ports. The United Kingdom which is depository for the Convention suggested that Canada make a declaration of this nature and has itself taken similar action and authorized deeper loading. The Order in Council is not applicable to ships operating in specified zones in certain seasons, to those marked with timber load-lines and carrying timber deck cargoes in accordance with the Timber Cargo Regulations of May 5, 1937, or to those operating in certain zones and not more than 330 feet in length. The Order was put into effect for a trial period expiring August 31, 1942, but when the Chairman of the Board of Steamship Inspection for the Dominion Government reported that no ill effects to ships or crew had resulted from the relaxation of standards it was extended for the duration of the war by an Order in Council of September 5, 1942 (P.C. 7991).

Two other Orders in Council were designed to relieve the wartime pressure on Great Lakes shipping. An Order of July 24, 1941 (P.C. 5581) relaxed special Load-Line Rules issued August 6, 1937, for ships operating on lakes and rivers to permit them to load below the summer load-line from May 16 to September 15. The depth to which they may be loaded is to be determined by the authorities issuing load-line certificates which must be marked to indicate the extent to which the Rules have been modified and are subject to cancellation by the Minister of Transport at any time. A subsequent Order (P.C. 2243, March 23, 1942), passed after consultation with United States authorities who agreed to take similar action in regard to American ships, extended the summer season by one month for Upper Lake Ships not able to navigate the St. Lawrence River locks, so that deeper loading was permitted between May 1 and September 30.

67746—6½

Merchant Seamen Discipline Regulations

Manning pools and training schools or centres for merchant seamen have been set up under Orders in Council of May 19 and November 22, 1941 (LABOUR GAZETTE, 1941, p. 957; July, 1942, p. 795). It has been found that, while the majority of the seamen in these manning pools and training centres are law-abiding, there are occasional instances of misconduct, drunkenness and disorder, and that it is difficult for the officers in charge to enforce discipline when they lack authority to impose penalties for minor offences. The Merchant Seamen Discipline Regulations, 1942, were therefore established by an Order in Council of November 26 (P.C. 10727) passed under the War Measures Act. They set forth the fines or other deductions, from wages which may be imposed as penalties for certain specified minor offences. The Regional Director of the manning pool or the Commandant of the training school or centre is responsible for the enforcement of the regulations. Whenever a complaint is made or when, without a complaint being made, he believes that disciplinary action is necessary, he will investigate the case and impose any penalty which is justified and authorized. A record will be kept of every penalty imposed and a copy of the record will be forwarded to the Director of Merchant Seamen on the day on which the penalty was imposed. These regulations do not in any way supersede any Dominion, Provincial or municipal law.

Housing Co-ordination Committee

This Committee, the constitution and powers of which are summarized elsewhere in this issue, was established by an Order in Council of November 26 under the War Measures Act (P.C. 10797) to co-ordinate the activities of the various departments and agencies of the Government concerned with matters relating to housing and the use of building materials.

Unemployment Insurance Act

Life insurance agents have been exempted from the coverage of the Act by a regulation gazetted November 21 amending the Unemployment Insurance Regulations regarding contributions (LABOUR GAZETTE, 1941, p. 633). See p. 1443 of this issue.

Provincial

Alberta Minimum Wage Act

Alberta has revised all its minimum wage Orders for women workers by Orders gazetted and effective November 30. The rates remain at $14 a week for women employed in offices, theatres, hairdressing establishments, telephone exchanges, garages and gasoline stations and as elevator operators; and at $12.50 for women in factories, hotels and restaurants, laundries, dyeing and dry cleaning establishments, shops and greenhouses. Women working in hotel dining rooms which are open for not more than five hours daily in centres of 600 population or less receive a minimum of $10 a week and women in canneries are to be paid hourly rates ranging from 25 to 35 cents. The only change in rates is the raising of the hourly rate for part-time workers in offices, hairdressing establishments, garages and gasoline stations and for those operating elevators from 30 to 35 cents.

All Orders now specify that the weekly minimum rate is to be paid for a week of six days. Formerly the Orders for hotels and restaurants, greenhouses and offices did not specify the length of the week. Time-and-a-half is now uniformly required for all hours in excess of nine a day and 48 a week. The Hours of Work Act limits hours to eight a day and 48 a week for all employed women, but in certain cases nine hours may be worked in a day without special permit if the weekly total does not exceed 48 hours. The earlier Orders relating to factories, laundries, dyeing and cleaning establishments, theatres, hairdressing establishments, garages and gasoline stations, elevator operators and shops required payment of the regular rate for the first hour of overtime on any day if weekly hours did not exceed 48, but called for time-and-a-half for all other overtime.

The provisions in the earlier Orders governing factories, shops, hairdressing establishments and laundries, dyeing and cleaning establishments, which permitted deductions from the minimum wages of regular employees who worked less than 48 hours a week have been omitted. As before, persons employed by the hour or day are to be paid at not less than specified hourly rates and must be paid for a minimum of four hours on any day they work. Provisions new to some Orders stipulate that not more than 25 per cent of the women workers in any establishment covered by the Orders may be employed at learners' rates unless there are less than four employees in which case one may be paid the lower rate. This clause has been inserted in all Orders even if learners' rates are not prescribed.

The following Orders contain changes additional to those indicated in the general summary:—

Order 1, factories, which replaces a 1937 Order (LABOUR GAZETTE, 1938, pp. 36, 622). The rates for apprentices in bookbinding, embossing, engraving and printing establishments have been brought into line with rates for all other types of apprentices covered by the Order except those in the millinery industry. Instead of beginning at $7 a week and receiving a $2 increase every six months, they now start at $6 and receive the $2 raise every four months. Their learning period has also been reduced from 18 to 12 months. In the case of apprentices in dressmaking, tailoring, fur-sewing and milliners' establishments the first month of employment must now be paid for at the appropriate rate. Previously no rate was fixed for the first month.

Order 7, offices, which replaces a 1941 Order (LABOUR GAZETTE, 1941, p. 556). Its coverage has been extended to telephone operators handling private business switchboards.

Order 14, canneries, which replaces an order of last March (LABOUR GAZETTE, July, 1942, p. 797). The learning period during which lower rates may be paid has been cut from two weeks to one and all workers with a week's experience, instead of a month as before, are entitled to full rates. Under the former Order part-time workers were to be paid at the rate applicable to their job but not less than 32 cents which is the lowest rate for experienced workers. The new Order omits this specific minimum for part-time workers but declares they are to be paid the rate applicable to their job and experience.

There are no alterations in the following Orders additional to the changes indicated in the general summary above:—

Order 2, laundries, dyeing and cleaning establishments; Order 4, hairdressing establishments; Order 5, theatres and other places of amusement; Order 6, garages, gasoline stations, and freight and passenger elevators; Order 8, retail and wholesale shops and mail order houses. These all replace 1937 Orders (LABOUR GAZETTE, 1938, pp. 36, 622).

Orders 3 and 3A, hotel and restaurant industry, which replace 1941 Orders (LABOUR GAZETTE, 1941, p. 555). Order 3A applies to hotels in towns and villages of 600 population or less if the dining rooms of such hotels are not open for more than five hours daily; Order 3 covers all other hotels and restaurants.

Order 9, public commercial telephone exchanges and branch exchanges, which replaces a 1938 Order (LABOUR GAZETTE, 1938, p. 1093).

Order 12, greenhouses, which replaces an Order of last March (LABOUR GAZETTE, July, 1942, p. 797).

Order 10 amended several of the revoked Orders in regard to rates for women employed by the hour or day and deductions for regular workers whose work-week is less than 48 hours. It, presumably, is no longer in effect. Order 11 relates to deductions for board and lodging and applies to all women covered by minimum wage Orders. Its provisions were written into Orders 3 and 3A concerning hotels and restaurants.

Alberta Mines Act

To meet the shortage of coal-miners, the Alberta Government, by Order in Council effective November 18 and gazetted November 30, has suspended the sections of its Mines Act relating to Miners' Certificates and authorized the Chief Inspector of Mines, on the recommendation of a District Inspector, to issue emergency coal-miners' certificates. The Chief Inspector must be satisfied before granting a certificate that this step will not endanger the safety of the mine or of the persons working in it. The certificates will authorize the holder to take charge of a working face or to be employed as a coal-miner under the supervision of another miner or to do such works as the inspector designates. Certificates must specify the type of work which the holder is authorized to do and the mine and district in which he may work. Holders of the certificates may not transfer to other mines without the permission of the Chief Inspector. A fee of $1 must accompany applications for emergency certificates which will expire March 31, 1943, but may be extended; they may also, without notice, be recalled or cancelled by an inspector in writing. Application of this regulation is limited to certain districts listed in the Order.

Manitoba Electricians' Licence Act

Under an Order in Council gazetted November 7 all electrical installations and repairs to which this Act applies must conform to the standards laid down by the Canadian Engineering Standards Association in the Canadian Electrical Code, Part I (Third Edition). A 1942 amendment in the Act gave the Lieutenant-Governor in Council power to make regulations regarding standards of electrical work. Previously regulations could only be made concerning licences and inspection. In 1932 the standards of the Code (second edition) had been adopted for all work to which regulations under the Electricians' Licence Act, the Fires Prevention Act and the Manitoba Power Commission Act applied.

Exempt from the Electricians' Licence Act and consequently from the Order is all electrical work carried on by public service corporations and municipal departments engaged in generating and distributing power in plants to which the public is not admitted, or engaged in operating railway transport systems. These bodies appoint their own electrical inspectors. Contractors for other electrical work must, before the work is completed, submit an application for inspection accompanied by the prescribed fee to the Department of Labour. Electrical service or power may be furnished before the inspection is made, if the company furnishing the power has been provided with a duplicate copy of the application for inspection as a temporary connection permit and is satisfied that the electrical installation or repairs have been properly done and do not constitute a hazard to persons or property.

Contractors undertaking electrical work for any public building such as a hotel, hospital, church, theatre, hall, etc., with a floor area of 1,200 square feet or more may not begin work before they have submitted to the Department detailed plans and have obtained the Department's approval.

Electrical inspectors may enter any building to inspect or test electrical equipment at all reasonable times. Inspection fees for different kinds of jobs are prescribed in the regulations. The Minister may waive compliance with any provision of the Code if undue hardship seems likely to result and the exemption does not create a hazard to persons or property. If local by-laws establish standards which the Minister considers are substantially the same as those in the Code, he may exempt the particular area from the regulations. The regulations and Electricians' Licence Act prevail over any conflicting provisions in the Code.

Quebec Minimum Wage Act

The following minimum wage Orders were renewed till January 1, 1944, by notices gazetted November 28: Order 7, Revised, shoe counter industry (LABOUR GAZETTE, 1938, p. 1350); Order 31, tailors and dressmakers in Quebec City (LABOUR GAZETTE, 1939 p. 1232); Order 32, mattress and upholstering industry in Quebec City, Levis and Quebec West (LABOUR GAZETTE, 1939, p. 1232); Order 34, ice industry and trading in Quebec City and District (LABOUR GAZETTE, 1939, p. 1233); and Order 36, foundries in Hull (LABOUR GAZETTE, 1940, p. 22).

Quebec Mining Act

The regulations governing the use of electricity in mines and quarries and those relating to safety and sanitary conditions (LABOUR

GAZETTE, 1930, p. 683; 1940, p. 23) have been amended by an Order in Council and its amendment gazetted November 21.

In the safety regulations the section on the procedure and equipment for firing explosives by electrical current has been changed, and all persons employed underground are now required to wear protective hats. The provisions of the electricity regulations relating to lightning arresters, secondary circuits of current transformers and portable electrical equipment have been altered and the definitions section repealed. In future all electrical equipment used in or about mines and quarries must be of a standard approved by the Canadian Engineering Standards Association instead of the Ontario Hydro-Electric Power Commission or the Chicago Underwriters' Laboratories as before. A new section has been added regarding the provision of ground detectors when electrical energy in excess of 300 volts is taken underground.

Quebec Stationary Enginemen's Act

Under the Stationary Enginemen's Act, 1942, (LABOUR GAZETTE, July, 1942, p. 804), revised regulations were gazetted November 14 replacing those issued in 1936 (LABOUR GAZETTE, 1936, p. 550). The fees for examinations and for renewals of certificates are unchanged and only minor details of the sections on examination procedure and the validity of certificates were altered. Several new classes of certificates have been established and the qualifications for some certificates have been changed.

In addition to the inspectors' certificates and first, second, third and fourth-class stationary enginemen's certificates now available, new certificates have been established for operators of portable steam machines, refrigerating machines and Diesel engines and for stationary engineers in sawmills and butter or cheese factories. Formerly, the holders of all classes of stationary enginemen's certificates were permitted to operate refrigerating machines after passing a special examination and no special certificate was issued. The new certificates for operators of refrigerating machines are divided into four grades for plants of different capacities (in tons of refrigeration) and four more grades are established for refrigerating machines not driven by steam. Examination and renewal fees for the new certificates are the same as for the special certificates which were issued under the earlier regulations for all types of equipment not covered by the ordinary certificates: $2 for the examination and $1 for renewal of the certificate.

As before two stationary enginemen's certificates of each class are issued, one for "A" installations and another for "AB" installations. The new regulations define "A" installations as steam boilers, steam reciprocating pumps, belt-driven pumps, automatic stokers, pulverized coal burners, blowers, compressors not driven by steam power and control apparatus. An "AB" installation includes steam boilers, steam engines and steam turbines. Holders of each class of stationary enginemen's certificates may now operate steam engines of greater motor horse-power than previously and all certificates now qualify the holder to take charge of electric boiler plants as well as steam boiler plants.

In regard to qualifications, the minimum age for fourth-class certificates has been reduced from 21 to 20 and the learning period for third- and fourth-class certificates from 24 to 18 months. The minimum age for candidates for the new refrigerating and portable machine and Diesel engine certificates is 18, and for the sawmill and dairy certificates, 20. No learning period is required for the Diesel engine, sawmill and dairy certificates; but for refrigerating machine operators it is 24 months for the first certificate and 6 months for promotion from one grade to the next. It is 18 months for portable machine operators.

New provisions stipulate that the board of examiners may reduce the apprenticeship period required for each class of certificate for persons who have taken technical school courses or are otherwise specially qualified. The Board may also authorize a stationary engineer to replace a man with a higher certificate for not more than 30 days. Stationary engineers may not leave the engine room for more than 15 minutes unless replaced by a man with a certificate not more than one degree below the grade required for the type of plant.

Saskatchewan Teachers' Superannuation Act

Administrative regulations under the new Teachers' Superannuation Act of 1942 were gazetted November 30. They clarify the application of the Act, indicate the method of applying for superannuation allowances and define a number of terms in the Act. The procedure to be followed by the Teachers' Superannuation Commission provided for by the Act, and the duties of the Commission Secretary are also outlined. The status of superannuated teachers who accept employment is clarified. The regulations rule that the annuity part of the superannuation allowance is to be computed according to Canadian Government Annuity Tables and the service pension part according to the Tables of Equivalent Values given in a schedule to the regulations.

FIFTH ANNUAL CONVENTION OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS

Resolutions Pledge Support of War Effort and Call for Total Mobilization of Material and Man-power Resources

DELEGATES to the Fifth Convention of the Congress of Industrial Organizations, held in Boston from November 9 to 13, pledged "complete and active support of the war effort," and called for "total mobilization of all material and man-power resources against the enemies of democracy."

Gains in membership during the year were reported by the Organization Department, also many new contracts signed by affiliated unions.

President Philip Murray's Report

In his opening address, Philip Murray, President of the CIO, stressed the importance to the war effort of the production front.

"Your job," he told the delegates, "is to win this war by producing all of the materials essential to the winning of the war."

He reaffirmed CIO demands for full labour representation on all war agencies, declaring: "This is a people's war. To win it, we need the energy and skill of all our people in the nation's service.

"Labour in America knows the problems and stakes that are involved. Labour knows production. It knows organization. It knows the steps that are necessary to victory.

"To ignore labour in planning and in administering the policies of the war program is to leave untapped a vast national resource—the people."

Mr. Murray declared his confidence in President Roosevelt and in the leaders of the other United Nations.

"We call upon our Commander-in-Chief," he said, "to make any demand and any request of labour, and we pledge ourselves to give everything we can in fighting men, in production, in money and in patriotism to enable the United Nations to grasp the offensive and smash forward to an immediate military destruction of the fascist Axis." (This statement was later embodied in a resolution passed by the Congress.)

Message from President Roosevelt

A letter from President Roosevelt expressed thanks for an invitation to speak at the convention.

President Roosevelt declared that his recent visit to industrial areas throughout the country had given him an encouraging picture of the way labour was fulfilling its part in winning the war. Thanking members of the CIO for their efforts, he further stated:

"I count on the members of your Organization to help in carrying out all the programs that are necesary for our national effort, and particularly those programs that have to do with preventing inflation, with sharing our customary good living with others, in order that the world may be safe for liberty and human betterment.

"In particular, I expect your members to help in carrying out the spirit of the Executive Order that deals with wage stabilization, with rationing, with price controls, and with other economic measures for the domestic security, as well as the pursuit of the war. I am sure that this co-operation will be forthcoming generously."

The convention was addressed by Mr. Bryn Roberts representing the British Trades Union Congress, the first British trade union officer to address a CIO convention. Mr. Roberts commented on the Anglo-Russian Joint Committee which, he said, was doing much to establish real co-operation between the two nations. "With the principles of our movement guiding us," he declared, "it is not too much to expect that such a committee, now limited to the Russians and ourselves, will without undue delay embrace the workers of all the other democratic countries."

Among other speakers to address the convention was Mr. A. R. Mosher, President of the Canadian Congress of Labour. Mr. Mosher said in part: "After the war is won . . . it will be in the interests of the workers of Canada and the United States and of the Canadian and American people that there be the utmost co-operation between the labour movements in our two countries, and we may furthermore set an example to the rest of the world, which may have far-reaching consequences in strengthening the foundations of peace. . .

"The winning of the war must naturally take first place in our minds. I know that you agree with your fellow-workers of Canada that industrial disputes should be avoided during wartime, and that nothing should be permitted to interfere with the production of war materials for our armed forces. What we may sacrifice now in the way of privileges we shall be able to regain in much greater

measure after the war is won, if we are able to show that we can exercise the self-restraint, the discipline, the courage which make such sacrifices possible."

Resolution Concerning War Mobilization

Stating that victory requires the fullest use of raw materials, farmlands, industrial facilities, and human resources, and that total mobilization of resources has not yet been reached, a resolution was passed by the Convention containing the following recommendations:

> National mobilization demands a nation-wide planning and utilization of all the material and man-power resources of the nation. Such a national mobilization requires a centralized administrative control of all of the resources and economic policies of the nation. . . A single administrative body should be established incorporating the activities of war supply, war man-power and of economic stabilization.
>
> Under such total war mobilization, all of the production facilities will be utilized on the basis of what is best for the nation. Centralized planning and control can determine the apportionment of facilities and materials between the military forces and our civilian needs. There can be no hindrance of such mobilization because of any profit or price problem or because of any fears of post-war difficulties. . . Total mobilization cannot operate or be organized except through the direct and fullest participation of labour—not through any advisory committee but with labour given the highest responsibility in the formulation and execution of all the policies and activities.

Other Resolutions

The following resolutions were among those also adopted by CIO delegates:

> That the CIO and its affiliated unions shall immediately seek to have organized a labour-management production committee in each war plant throughout the nation; that the government compel employers, when necessary, to participate and co-operate in the formulation of such committees.
>
> That the prices of goods and commodities be adjusted and maintained at a level low enough to stabilize the cost of living and to bring and keep the necessities of life within the reach of all the people.
>
> That an immediate program be invoked to assure an overall rationing of foods and other necessities.
>
> That wages continue to be stabilized but not frozen; that wage adjustments must continue to be made to eliminate sub-standard conditions and all outstanding inequalities and discriminatory practices.
>
> Expressing support and confidence in the committees representing the CIO and AFL to bring forward a fair and equitable program for the establishment of a unified labour movement dedicated to the winning of the war and the promotion of the basic and democratic interests of the working men and women of America.
>
> That the CIO continue to take all necessary steps to establish international labour co-operation with direct participation by the British and Soviet unions, the AFL, the CIO and Railway Labour, and the unions of the other United Nations, including our Latin-American allies.
>
> Paying tribute to the courage and heroism of men in the armed forces, and pledging that "as soldiers of the home front we shall continue to provide an avalanche of materials of war to our armed forces so that they, with the armed forces of our United Nations may successfully terminate this war as quickly as possible."
>
> Expressing opposition to any form of racial discrimination, and determination to carry on the fight for protection in law and in fact of the rights of every racial and religious group to participate fully in social, political and industrial life.
>
> Expressing determination to continue to expand the organization of the unorganized in war industries.
>
> That child care centres be established in all communities in order to permit women with children to accept war jobs.
>
> That all discrimination against the employment of women be stopped; that women receive equal pay for equal work.
>
> That unions devote special study to the problem of women workers and make full use of the qualities of initiative and leadership that they can bring to the CIO.
>
> Calling upon the government information agencies responsible for the direct job of building morale and national unity to "undertake a vigorous educational drive to spread understanding of the nature of the war and of our enemies, based on the fundamental aims outlined by President Roosevelt and other United Nations leaders;" and undertaking "through our own unions and all other means of communication we have to aid government agencies in carrying out this necessary task, to the end that all people may understand the full nature of our war against fascist aggression and through that understanding fight with greater strength and determination than before."

Election of Officers

At the close of the convention, Philip Murray was re-elected to a third term as president of the CIO. James B. Carey was re-elected for the fifth time as secretary, his title being extended to that of secretary-treasurer.

Elected as vice-presidents were: Joseph Curran, National Maritime Union; S. H. Dalrymple, United Rubber Workers; Emil Rieve, Textile Workers Union; Reid Robinson, Mine, Mill & Smelter Workers Union; Frank Rosenblum, Amalgamated Clothing Workers; R. J. Thomas, United Automobile, Aircraft & Agricultural Implement Workers; Albert J. Fitzgerald, United Electrical, Radio & Machine Workers; Allan S. Haywood, CIO director of organization; John Green, Industrial Union of Marine & Shipbuilding Workers.

ACTIVITIES OF THE UNEMPLOYMENT INSURANCE COMMISSION

Progress of Insurance Registration at December 1, 1942—Amendment to Unemployment Insurance Regulations—Claims for Benefit—Report of Employment and Selective Service Offices for October—Employment Conditions at the End of November

REPORTS from Local Offices of the Unemployment Insurance Commission showed that at December 1, 1942, 162,174 employers' establishments and 3,466,693 persons were registered. Of the persons registered, 2,743,732 were insurable and 722,961 were uninsurable.

The insurable group consisted of insurable employees of registered firms and unemployed persons whose last employment was insurable. The other group of persons registered included employees of registered firms not coming within the coverage of the Act, and partners and proprietors of these firms. Also forming a part of this group were persons unemployed at date of registration whose last employment was uninsurable, and women between the ages of twenty and twenty-four not engaged in insurable employment at the time of the recent registration.

Amendment to Unemployment Insurance Regulations

Life insurance agents have been exempted from the coverage of the Act by a regulation gazetted November 21 amending the Unemployment Insurance Regulations regarding contributions (LABOUR GAZETTE, June, 1941, page 633). Formerly, such a worker was subject to the Act unless he was mainly dependent for his livelihood on his earnings from some other non-insurable occupation or was employed by several employers and not mainly dependent on any one of them for his livelihood. The term 'life insurance agent' is defined as including "a person who, for compensation, solicits contracts of life insurance on behalf of any insurer or transmits, for a person other than himself, an application for or a contract of life insurance to or from such an insurer or offers or acts or assumes to act in the negotiation of such contracts, but does not include any officers or salaried employees of an insurer, except in respect of commissions or salaries in lieu of commissions received by such officers or employees for acting as a life insurance agent as herein defined."

Claims for Benefit

The amount paid in claims for unemployment insurance benefit during the period from February 1 to October 31, 1942, was $287,483. In this period 20,055 claims were received for adjudication at the nine insurance offices of the Commission of which 14,806 claims were allowed, 4,121 claims were not allowed, with 1,128 claims pending.

An analysis of the 4,121 claims not allowed by Insurance Officers reveals the following reasons for non-allowance: 1,528 claims under Section 28 (i) with insufficient contributions; 122 claims under Section 28 (ii) in which 69 applications were not made in the prescribed manner, and 53 of the claimants were not unemployed; 85 claims under Section 28 (iii) in which 52 claimants were not capable of work and 33 claimants were not available for work; 29 claims under Section 43 (*a*) for loss of work due to a labour dispute; 34 claims under Section 43 (*b*) (i) for refusal of an offer of work; 30 claims under Section 43 (*b*) (ii) for neglect of opportunity to work; 1 claim under Section 43 (*b*) (iii) for failure to carry out written directions; 2,271 claims under Section 43 (*c*) in which 483 were disqualified because they were discharged due to their own misconduct, and 1,788 were disqualified for voluntarily leaving without just cause; 3 under Section 43 (*d*) for being under 16 years of age; 2 under Section 43 (*e*) for being inmates of prison, etc.; 16 under Section 43 (*f*) for being in class "O" contributions.

The Interest column represents the interest received on the due dates of the various Government bonds and includes accrued interest at the time of purchase. This figure does not include the accrued interest earned to October 31st.

Appeals and References

During the period from February 1 to October 31, 1942, there were 329 references and 25 appeals made by claimants, to Courts of Referees. In addition there were 8 references by Insurance Officers to Courts of Referees. Of the 362 references and appeals, 269 were heard, 57 have not yet been heard, and 36 were withdrawn. The Courts of Referees disallowed 222 claims and allowed 47.

Appeals to Umpire

Two claimants have sought permission from the Chairmen of the Courts of Referees to appeal to the Umpire under Section 58 (c) (ii). One request to appeal was refused while the other was granted. The appeal from the decision of the Courts of Referees by this claimant was made and the Umpire upheld the decision of the Court.

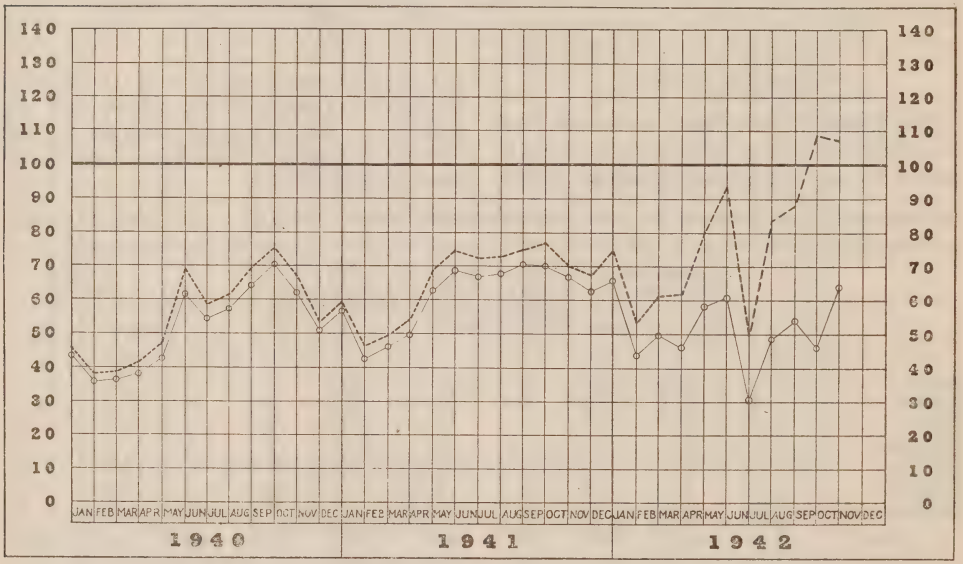
Report of Employment and Selective Service Offices for October, 1942

During the month of October, 1942, reports received from Employment and Selective Service Offices showed an increase in daily placements of 66 per cent when a comparison was made with the report for September, 1942, and of nearly 332 per cent when compared with the corresponding month a year ago. All industrial groups registered increases over September, 1942, the gain in manufacturing being most noteworthy with substantial advances in services, construction, agriculture, trade and logging. When a comparison was made with October, 1941, marked advances in placements were revealed in all industrial divisions, the gain in manufacturing being exceptionally large. Outstanding expansions were noted in trade, construction and important additions in transportation, agriculture, services and logging.

The accompanying chart shows the trend of employment since January, 1940, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered each month at the Employment and Selective Service Offices throughout Canada. It will be seen from the graph that the trend of the curve of vacancies in relation to applications was slightly down-

ward, while that of placements was decidedly uppward, the ratio of vacancies to each 100 applications being 107·3, during October, in contrast with 108·9 in September and 70·1 during the corresponding period of 1941. The ratio of placements to each 100 applications during the period under review was 63·8 compared with 46·4 for September, 1942, and 66·7 during the corresponding month in 1941.

The average number of vacancies reported daily by employers to the offices throughout Canada during October, 1942, was 10,428 compared with 9,642 during the preceding month and with 1,966 in October a year ago.



The average number of applications for employment received daily by the offices during the month under review was 9,716, in comparison with 8,855 in September, 1942, and with 2,804 during October last year.

The average number of placements made daily by the offices during October, 1942, was 6,208 of which 5,976 were in regular employment and 232 in work of one week's duration or less, as compared with a total daily average of 4,114 during the preceding month. Placements in October a year ago averaged 1,870 daily, consisting of 1,169 in regular and 701 in casual employment.

During the month of October, 1942, the offices referred 224,401 persons to employment and effected a total of 161,385 placements; of these, the placements in regular employment were 155,385 of which 105,908 were of men and 49,477 of women, while placements in casual work totalled 6,000. The number of vacancies reported by employers was 184,842 for men and 86,276 for women, a total of 271,118, while applications for work numbered 252,595, of which 160,250 were for men and 92,345 for women. Reports for September, 1942, showed 241,038 positions available, 221,352 applications made and 102,827 placements effected, while in October, 1941, there were recorded 51,098 vacancies, 72,897 applications for work and 48,599 placements in regular and casual employment.

* 248 placements effected by offices now closed.

Nova Scotia and Prince Edward Island

During the month of October, 1942, positions offered through Employment and Selective Service Offices in Nova Scotia and Prince Edward Island were 20 per cent fewer than in the preceding month, but 335 per cent above the corresponding month of last year. There was an increase of 24 per cent in placements when compared with September and of 210 per cent in comparison with October, 1941. All industrial divisions, except agriculture, participated in the increase in placements over October of last year, the gains in manufacturing, construction, trade and transportation being the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 2,530; construction, 2,195; services, 1,493; trade, 745, and transportation, 448. During the month, 5,795 men and 2,018 women were placed in regular employment.

New Brunswick

Orders received at Employment Offices in New Brunswick during October called for 18 per cent more workers than in the preceding month, and 690 per cent more than in the corresponding month of last year. Placements were 53 per cent more than in September, 1942, and 298 per cent in excess of the number reported during October, 1941. The increase in placements over October a year ago was due to substantial gains in manufacturing, construction and trade, with somewhat smaller increases in logging and transportation. There was a small decline in services. Placements by industrial divisions included: manufacturing, 1,087; construction, 990; trade, 785; services, 742; logging, 503, and transportation, 420. There were 3,308 men and 1,158 women placed in regular employment during the month.

Quebec

The demand for workers, as indicated by orders received at Employment Offices in the Province of Quebec during October, was 35 per cent greater than in the preceding month, and 400 per cent above the corresponding month of last year. There was an increase also in placements of 126 per cent in compari-

son with September, and of 171 per cent when compared with October, 1941. When comparing placements by industrial groups, during the month under review with October of last year, a substantial increase was recorded in manufacturing, with smaller gains in construction, agriculture and trade. The improvement in these groups was partly offset by a large decrease in services and a small reduction in transportation. Placements by industrial divisions included: manufacturing, 19,064; construction, 7,310; logging, 5,101; services, 3,785; agriculture, 3,045, and trade, 2,946. Placements in regular employment numbered 32,402 of men and 10,332 of women.

ONTARIO

Employment opportunities as indicated by orders received at Employment Offices in Ontario during October were nearly 11 per cent better than in the preceding month, and 464 per cent above the corresponding month of last year. There was an increase also in placements of 49 per cent when compared with September, and of 296 per cent in comparison with October, 1941. All industrial divisions participated in the increase in placements over October a year ago, the most noteworthy advances being in manufacturing, trade and services. Industrial divisions in which most of the placements were effected were: manufacturing, 32,146; services, 8,596; trade, 5,192; construction, 5,123; logging, 3,331; transportation, 2,212, and agriculture, 2,099. During the month 34,986 men and 24,143 women were placed in regular employment.

MANITOBA

Positions offered through Employment Offices in Manitoba during October called for 9 per cent more workers than in the preceding month, and 321 per cent more than during the corresponding month of last year. Placements were 37 per cent higher than in September, and 107 per cent above October, 1941. All industrial groups reported gains except agriculture and logging, in which moderate losses occurred. The most marked improvement recorded was in manufacturing, trade, transportation and construction. Placements by industrial divisions included: manufacturing, 2,067; services, 1,871; trade, 1,212; construction, 945, and transportation, 527. There were 4,404 men and 2,016 women placed in regular employment.

SASKATCHEWAN

The demand for workers as indicated by orders received in the Employment Offices in Saskatchewan during October, was 77 per cent greater than in the preceding month and 433 per cent above the corresponding month of last year. There was an increase also in placements of 40 per cent in comparison with September, and of 136 per cent when compared with October, 1941. All industrial divisions, except construction, participated in the increase in placements over October of last year, the gains in agriculture, trade, services and manufacturing being the most pronounced. Industrial divisions in which most of the placements were effected during the month were: services, 1,791; agriculture, 1,461; trade, 1,039, and manufacturing, 776. There were 3,653 men and 1,767 women placed in regular employment.

ALBERTA

There was an increase of over 4 per cent in the number of positions offered through Employment Offices in Alberta during October when compared with the preceding month, and 238 per cent in comparison with the corresponding month of last year. Placements were 49 per cent higher than in September, and 161 per cent above October, 1941. With the exception of a moderate decline in logging, all industrial divisions showed increases in placements over October of last year, the most important gains being in manufacturing, construction, trade, services and transportation. Placements by industrial divisions included: services, 2,104; agriculture, 1,688; construction, 1,669; manufacturing, 1,509; trade, 1,243, and transportation, 816. There were 5,987 men and 2,782 women placed in regular employment.

BRITISH COLUMBIA

Employment Offices in British Columbia were notified of 21 per cent fewer positions during October than in the preceding month, but 706 per cent more than during the corresponding month of last year. Placements were 25 per cent higher than in September and 492 per cent above October, 1941. With the exception of a minor decline in agriculture, all industrial divisions participated in the increase in placements over October, 1941, the most noteworthy gains being in manufacturing, construction, trade, logging, transportation and services. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 9,229; construction, 3,358; services, 2,700; trade, 1,894; logging, 1,607, and transportation, 1,552. During the month 15,373 men and 5,261 women were placed in regular employment.

Employment Conditions at the End of November

Placement activities as reported by Employment and Selective Service Offices during the month of October, 1942, together with statistical summaries for that period are covered by an earlier section of this report. Later reports indicate that conditions at the end of November were as follows:—

Agricultural operations in the Maritime Provinces were practically suspended. Owing to fine weather during the autumn, fall ploughing was well advanced and many farmers were offering themselves as woodsmen and for work on defence projects. A few men were engaged in early smelt fishing in Prince Edward Island and normal catches of fresh and dried fish were being landed at Halifax. Fishermen, not otherwise employed, were returning to prepare for the lobster season. Logging operations were developing and in a few districts farmers and fishermen were providing some of the needed labour, but at other points, notably New Brunswick, the demand for labour was increasing and the supply was inadequate. All coal mines were working full time and additional miners were in demand, particularly in the New Glasgow area where the shortage was acute. Manufacturing plants generally were working full time and the supply of labour was adequate for the most part but a shortage of skilled mechanics was noticeable in the iron and steel industries at New Glasgow and skilled breadmakers were in demand at Halifax. The pulp and paper mills at Campbellton and Saint John were working at capacity, but were in danger of shutdowns owing to lack of water. Scarcely any construction work was under way in Prince Edward Island and the movement of men to the mainland was continued. National Defence projects were well advanced in portions of Nova Scotia but in other places they were being held up by the acute shortage of labour, notably carpenters and labourers. Activity at the airports was being renewed as materials were becoming available for runways. At Yarmouth the demand for building tradesmen was light but carpenters, painters, bricklayers, plumbers and labourers were urgently needed at Deep Rock and few applicants were available. With the exception of Saint John, where Government projects were under way, there was little construction activity in New Brunswick. Transportation and trucking companies at Halifax needed truck drivers and helpers, and railway and express companies required porters and labourers. These requirements were being only partially filled. Passenger traffic and freight movement were heavy, both on railways and on the Bay of Fundy water routes. At Halifax there was a steady demand for waitresses, also for sales clerks in anticipation of the Christmas trade. There was urgent need for domestic help but many young women refused to take such work, preferring positions in factories.

There were heavy demands for loggers and woodsmen in the Province of Quebec with few men offering their services. Most lines of manufacturing were active and working near capacity. Indications of some slowing up in the pulp and paper industry were in evidence. There was a considerable demand for female workers in textile, tobacco and shoe industries, as well as in the arsenals. Slight temporary lay-offs in a few centres resulted from shortages of materials and changes in operations but experienced rivetters, bolters, reamers, marine firemen, electric welders and sheetmetal workers were needed in shipbuilding industries. In all, approximately 500 men were required in the skilled metal trades in Montreal alone. These were difficult to obtain because of the experience necessary. Orders for workers on aircraft were being filled and some plants were taking on women workers. The supply of labourers was adequate. Construction work in many sections was nearing completion and, in a few instances men were being released and being absorbed in other lines of work. Shortages of skilled craftsmen were noticeable in a few centres. Transportation companies have been able to obtain the labour they required. Trade was reported good and any demand for workers was being met. Domestic help, cooks and waitresses were required in several industrial centres but there were few applicants. Experienced stenographers were scarce and assistance in a few of the professional services was being sought.

Owing to weather conditions farm activities in Ontario were curtailed but experienced help for the winter months was required in most areas and applicants for such work were very few. Threshing of flax was completed in Northwestern Ontario and yields were reported to be excellent. There were heavy demands for cutters, loggers and bushmen with comparatively few applicants. There were some enquiries for miners especially for underground work which were not being fully met but a slight improvement in the situation seemed evident. Manufacturing plants were operating at a high level of activity, but skilled labour was needed in the metal, textile and woodworking industries and to a lesser extent in abrasives, chemical and specialized war industries. There were few applicants available and the demand was not fully

satisfied. A shortage of materials had slowed down production temporarily in some plants. Female labour was replacing male in some plants connected with the aeroplane industry and labour troubles at one or two points were disturbing factors in allied industries. Pulp and paper mills in Northwestern Ontario were working on reduced time and the supply of labour appeared adequate. Although construction projects have been completed in some centres there was still much activity and the demand for skilled tradesmen and labourers was not fully met. Movement of freight by railways was heavy, lake freighters were tying up for the winter and the railways were re-arranging their staffs of section labourers. The demand for extra gang workers, brakemen and switchmen at some important railway centres was not fully met as few men were willing to accept this class of work. There were occasional demands for office help, which for the most part, were being met. Employment in the hotel trade was stable and in almost all cases the necessary workers were being secured. The almost general, and often urgent, demand for domestics, hotel and restaurant workers, was far from being supplied as applicants preferred other lines of work.

Experienced farm helpers for the winter months were greatly needed throughout the Prairie Provinces except in a few centres in Western Alberta and in Central Saskatchewan but there were few applicants. Despite the fact that there was a steady flow of experienced bushmen through the Employment Offices, the demand for more help was continuing. In some areas it was acute and the available supply was inadequate to meet the needs. The shortage of experienced coal miners was serious in most of the Prairie coal mining areas. Efforts were being made to induce miners engaged in farming and construction work to return to the mines. The demand for workers in the manufacturing industries was not excessive although many more skilled tradesmen could be employed. The recruitment of skilled labour for the aircraft, munitions and shipbuilding industries on the Pacific Coast had only met with moderate success. Building activity had declined mostly because of a shortage of materials as well as on account of bad weather. Men for this work were being secured in Winnipeg for the West Coast. There was a heavy demand for carpenters at Edmonton most of whom were being secured. The need for labour for highway and airfields construction in the northern area continued. Lake navigation was closing and 700 stevedores were being laid off, most of whom were going to work in the woods. Extra railway gangs were being reduced in most places and the men were being placed in other lines of work. Both wholesale and retail trade were reported active and with the approach of Christmas additional help was being secured. The demand for hotel, restaurant and domestic help much exceeded the supply.

Except for a slight demand for help on dairy farms on Vancouver Island, the farm labour supply in British Columbia appeared adequate. There was a general demand for fallers, sawyers, swampers, buckers and other experienced bush men, although the number of unfilled vacancies had decreased on Vancouver Island. A need for miners and muckers continued in the base metal mines and the shortage of coal miners was serious in every coal mining area. There were many enquiries for sawmill workers with a few lumber men trying to employ Japanese. Packing plants had completed their main packs and were releasing labour.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA

Industrial Situation as Indicated in Reports of Employers, Trade Unions and Value of Building Permits

THE accompanying information as to the employment situation in Canada is based upon reports from the following sources:—

The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting October 1, was 13,200, the employees on their payrolls, numbering 1,815,672, compared with 1,795,420 in the preceding month.

The Department of Labour receives reports from the local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for October was 2,246, having an aggregate membership of 389,236 persons, 0·7 per cent of whom were without employment on November 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

Recorded in the concluding section of this article and indicative of the employment situation in the building trades are the detailed statistics compiled by the Dominion Bureau of Statistics each month showing the value of building permits granted and the value of building materials.

The Employment Situation at the Beginning of October, 1942, as Reported by Employers

The trend of employment and payrolls continued upward at the beginning of October, there being an increase of 1·1 per cent in the former and 1·8 per cent in the latter as compared with September 1. The Dominion Bureau of Statistics tabulated information from 13,200 establishments which employed 1,815,672 persons at October 1, and disbursed the sum of $53,549,615 in payment for services rendered in the week preceding; their employees at the beginning of September had numbered 1,795,420, who had been paid $52,591,352 in weekly salaries and wages.

Of the 1,815,672 persons in recorded employment at October 1, 1,403,353, or 77·3 per cent were males, and 412,319, or 22·7 per cent, were females. This is the first occasion on which information has been obtained in regard to the sex distribution of the salaried employees and wage-earners in the current surveys. A brief discussion of these statistics is given in this report. Tables showing the distribution of the males and females in recorded employment at October 1 are also given, together with certain comparative data available in the Bureau.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

The latest percentage gain in employment was slightly above the average for October 1 in the experience of past years, although, as in preceding months, it was not equal to that indicated at the same date of 1939, 1940 or 1941. Also as in recently preceding months, the industrial distribution of the persons added to the working forces was abnormal, with greater-than-average advances in manufacturing, and smaller-than-usual increases in the non-manufacturing classes.

Within the manufacturing division, there was further marked expansion in activity in iron and steel and vegetable food plants; these reported over 10,200 and 7,200 additional workers, respectively. There were smaller gains in the tobacco, chemical, electrical apparatus and non-ferrous metal industries. In textiles, little general change was shown, while the trend in the remaining groups was downward.

Among the non-manufacturing classes, logging, transportation, construction and retail trade afforded more employment. The gains in construction were contra-seasonal; those in the other divisions were seasonal, but, except in transportation, they were not equal to the usual advances at October 1. The increase in logging especially was greatly below normal. The remaining non-manufacturing groups, mining, communications and services, reported curtailment; that in mining was contrary to the customary movement at October 1, but the losses in communications and services were in accordance with the usual trend in the autumn.

The crude index number of employment (based on the 1926 average as 100), rose from its former maximum of 179·3 at the beginning of September, to 181·3 at October 1, as compared with 165·8 at October 1, 1941. In the latter comparison, there was an increase of 9·3 per cent, which was accompanied by that of 21·7 per cent in the reported weekly payrolls in the 12 months. When adjusted for seasonal influences, the October 1 index of employment was 172·5, slightly above the corrected figure of 172·3 at the beginning of September.

Payrolls

The payrolls disbursed at October 1 by the co-operating establishments amounted to $53,549,615, as compared with $52,591,352 in the last report. This increase of 1·8 per cent continues the trend which, with only one exception, has been indicated from the institution of these statistics in the spring of 1941. The exception was at January 1, when the observance of the holidays had lowered the reported earnings. The per capital weekly earnings averaged $29.49 at the latest date, 20 cents higher than that of $29.29[1] in the preceding period of observation.

The October 1 survey shows that, including statistics for financial institutions, the number of persons in recorded employment was 1,879,845, whose payrolls for services rendered in the last week in September amounted to $55,522,358. This was a per capita average of $29.54. At September 1, the establishments co-operating in the nine leading industrial groups—manufacturing, logging, mining, communications, transportation, construction, services, trade and finance—reported a total payroll of $54,503,743 paid to 1,859,568 men and women, whose weekly earnings averaged $29.31[1].

Statistics of employment and payrolls, on the base June 1, 1941=100, in the period for which the payroll data are available, are given

[1] Revised.

for the eight leading industries and for manufacturing in table 1. This shows that an increase of 9·3 per cent in the last 12 months in the number of persons reported as at work in the eight leading industries, has been accompanied by that of 21·7 per cent in their weekly payrolls; in the nine main industrial divisions including finance, the gain in employment has amounted to 9·1 per cent and in payrolls, to 21·3 per cent in the year.

From June 1, 1941, to October 1, 1942, there was an increase of 18·6 per cent in general industrial employment, accompanied by a gain of 37·9 per cent in the reported payrolls. The reasons previously given for the much greater advance in the index of earnings than in that

[1] This classification comprises the following:—Iron and steel, non-ferrous metals, electrical apparatus, lumber, musica instruments and clay, glass and stone products.
* Revised.

of employment may again be stated: (1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the average and in addition, there is a considerable amount of overtime work, and (2) the extension of the system of paying a cost-of-living bonus to the majority of workers; the rates at which this allowance has been calculated have been enlarged on more than one occasion since its institution. In certain cases, higher wage-rates have also been awarded. In spite of these main factors beneficially affecting the typical worker, the average earnings of the individual have not shown advances commensurate with those in the index of aggregate payrolls. This is a result of the continued

dilution of labour. Where the latter has risen by 37·9 per cent, the index of per capita earnings has increased by 16·8 per cent since June 1, 1941.

Employment and payrolls in manufacturing have shown advances on a much larger scale than the other industries; the index of employment in this division increased by 29·9 per cent between June 1, 1941, and October 1, 1942, while that of payrolls has risen by 52·8 per cent. The per capita earnings have gained by 17·8 per cent in the same interval. The factors mentioned above as influencing the all-industries statistics operate with greater force in the case of manufacturing.

The expansion in employment and payrolls in the durable goods industries has been extremely marked in the period from June 1, 1941; the index in the former has risen to 142·3 and that in the latter to 172·0 at October 1, 1942. In the non-durable goods class, the latest index number of employment stood at 119·3 per cent of the June 1, 1941, figure, and that of payrolls, at 133·1.

In considering the marked variations which are found to exist in the average earnings of those employed in the different industrial classes, it must be borne in mind that the sex distribution of workers therein is an important factor, being also frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages.

The Course of Wartime Employment

Since the outbreak of hostilities, the trend of employment has been almost uninterruptedly favourable, the rare exceptions to the generally buoyant movement being the seasonal losses indicated in the winter of 1939-40, at December 1, 1940, and January 1, 1941, and in the first quarter of 1942. On each occasion, these contractions have on the whole been on a small scale. As a result of the generally upward movement during the period of the war, the index for all industries combined has risen from 119·6 at September 1, 1939, to 181·3 at October 1, 1942, or by 51·6 per cent in the 37 months. The expansion was particularly marked from the summer of 1940 until the winter of 1941-42, but in more recent months, the rate of acceleration has tended to slow down. This development was to be expected in view of the magnitude of the industrial war effort, with the resultant depletion of the Dominion's reserve of labour,

NOTE:—The relative weight, as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

augmented by the transfer of over half a million men into the armed forces.

The current surveys of employment show that since the outbreak of war, some 617,000 additional workers have been taken on by the establishments furnishing monthly statistics. The smaller firms may also have increased their staffs considerably, although it seems likely that recent events have, on the whole, reacted less favourably upon the smaller businesses. The recruitment of a labour force of this size, together with the enlistment of some 600,000 men in the various services in the space of three years, has brought about many important changes in the industrial and occupational distributions of the Canadian population.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	Oct. 1 1942	Sept. 1 1942	Oct. 1 1941
Manufacturing	**62·6**	**218·3**	**215·6**	**184·9**

[1] The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

* Revised.

The principal sources from which these accessions to the industrial payrolls have been drawn are as follows: (*a*) unemployed workers, (*b*) the own-account and small-employer classes, (*c*) agriculture, (*d*) home-makers and other women, (*e*) adolescents, who under normal conditions would probably continue at school for a year or two longer, or possibly for a lengthier period. At the other end of the scale, many older men and women are undoubtedly prolonging their period of service beyond the usual retirement age. The armed services, in addition to drawing upon most of the above reservoirs for recruits, have of course also taken very large numbers of persons from their former employment in industry.

The expansion in manufacturing since the outbreak of hostilities has been particularly impressive, the index of employment having risen 89 per cent between September 1, 1939, and October 1, 1942. The gain in the non-manufacturing classes as a whole has amounted only to 13·6 per cent in the 37 months.

Within the manufacturing group, the highest degree of activity has been indicated in the production of durable goods, in which the index has risen from 100·4 at the beginning of the war, to 260·1 at October 1, 1942, or by 159 per cent. Even greater than this gain, has been that shown in the manufacture of iron and steel plants, while the non-ferrous metals and electrical apparatus factories have also reported extremely large additions to their working forces.

The increase in employment in the non-durable group of industries has resulted partly from the manufacture of commodities required in the prosecution of the war, and in the equipment and maintenance of the armed forces in Canada and abroad, but is also partly due to greater civilian consumption consequent upon an exceptionally high level of employment and payrolls. As a result of these factors, employment in the production of non-durable goods as a whole has risen by 47·2 per cent in the 37 months. Much of the gain has taken place in the chemical group, the manufacture of explosives and ammunition constituting a very important part of the war program.

In the non-manufacturing industries, employment in logging, communications, transportation, services and trade was at a considerably higher level at October 1, 1942, than at September 1, 1939. In mining and construction, on the other hand, activity was generally less at the latest date than at the beginning of the war; so far, the losses have been moderate.

Employment and Payrolls by Industries

Manufacturing.—The trend of employment and payrolls continued seasonally upward in manufacturing at October 1; the advance in employment again was above-average for the time of year, although it was smaller than at the beginning of October in 1939, 1940 or 1941. The distribution of the gains once more differed from the normal, those in the durable goods group being substantially greater than usual, while employment in the production of non-durable goods showed an increase which was below average. In the latter case, the smaller-than-usual expansion was probably partly due to the existing labour situation.

The 7,368 co-operating manufacturing establishments employed 844,501 men and 292,741 women at October 1, a total of 1,137,242 workers; in their preceding report they had indicated a personnel of 1,123,428. There was accordingly a gain of 13,814 persons, or 1·2 per cent, in the number in recorded employment in manufacturing, which reached a new all-time high at the date under review. The weekly payrolls disbursed at the beginning of October amounted to $34,269,765, or 2·7 per cent more than the sum of $33,384,470[1] reported by the same firms at September 1. The per capita average showed a further gain, rising from $29.72[1] in the last report, to $30.13 at the date under review, as compared with $26.80 at October 1, 1941. The ever-growing concentration of workers in the more highly paid heavy industries is chiefly responsible for the considerable increase in the payrolls reported at the beginning of October.

As already stated, the largest additions to the working forces were in the iron and steel and vegetable food divisions; the expansion in the former in particular was unusually great for October 1. Increases on a much smaller scale were reported in tobacco, beverage, chemical, non-ferrous metal and electrical apparatus plants. On the other hand, the trend of employment was downward in animal food, leather, lumber, pulp and paper, rubber, clay, glass and stone and non-metallic mineral products. Textiles showed no general change.

Based on the 1926 average as 100, the index of employment in manufacturing at the beginning of October stood at 218·3; this figure was the highest in the record, considerably exceeding the October 1, 1941, index of 184·9. Since the increase from the preceding month was above-normal, the seasonally-adjusted index showed a further upward movement, advancing from 209·6 at September 1, to 211·6 at the date under review.

[1] Revised.

The unadjusted indexes of employment in manufacturing at October 1 in recent years, based on the 1926 average as 100, are as follows: 1942, 218·3; 1941, 184·9; 1940, 143·8; 1939, 119·7; 1938, 112·5; 1937, 121·7 and 1936, 109·0. For October 1, 1941, 7,001 manufacturing establishments had reported 961,559 men and women on their staffs.

The co-operating manufacturers reported the disbursement of $34,269,765 in weekly payrolls at October 1. This was an increase of $885,295, or 2·7 per cent over the weekly salaries and wages paid on or about September 1. The per capita average, at $30.13, was the highest in the record, which goes back only to June 1, 1941. At October 1, 1941, the average had been $26.80.

Based on the weekly salaries and wages paid by the co-operating establishments on or about June 1, 1941, as 100 per cent, the index of payrolls at October 1, 1942, stood at 152·8, as compared with 148·9[1] at September 1, 1942, and 115·4 at October 1, 1941. The increase of 32·4 per cent in the reported payrolls at the date under review as compared with twelve months earlier, considerably exceeds that of 18·1 per cent in the number of persons employed by the co-operating manufacturers. As elsewhere given, the main reasons for this disparity are, first, the growing concentration of workers in the more highly-paid heavy industries, together with a considerable amount of overtime work for such classes, and secondly, the wide application of the method of meeting the increased cost-of-living by the payment of a bonus under the terms of P.C. 8253 of October 24, 1941, together with the general increases in this allowance since its institution, notably that authorized for the first pay period after August 15 of the present year. The importance of the first of these factors is emphasized by the fact that the October 1 index number of payrolls in the durable goods group stood at 172·0, or 47·1 per cent higher than at the same date of 1941, while that in the non-durable goods, at 133·1, showed an increase of 16·0 per cent; the index of employment in the heavy industries in the same period has risen by 30·5 per cent, as compared with the gain of 6·7 per cent, in that for the light manufacturing industries.

During the period for which statistics of payrolls are available, there have been especially noteworthy increases in the salaries and wages reported in the non-ferrous metal, chemical, iron and steel, miscellaneous manufactured products, electrical apparatus and equipment and beverage industries. These gains have been associated with important advances in employment; in most instances, however, the percentage rise in the latter has been proportionately less than that in the payrolls, with the result that, despite the continued dilution of labour, the average per capita earnings in these industries are higher than they were at the beginning of October, 1941. This statement, indeed, applies to the majority of manufacturing classes.

In making comparisons of the per capita averages in the various industries, it should be recalled that many factors contribute to the differences that exist. Prominent among these is the sex distribution of workers in the 133·1, showed an increase of 16·0 per cent; various industries, as indicated in tables appearing elsewhere in this report. Associated with the sex distribution is that of age, the women workers in general tending to belong in the younger age groups, where earnings are usually lower than among the more experienced employees. Another important factor is the presence or absence of overtime work.

Logging.—Employment in logging showed a seasonal increase which was decidedly below normal for the season. The 440 co-operating employers reported 45,005 workers; this was 1,241 more than at September 1. Employment generally was not so active as at the beginning of October in 1940 or 1941. Although the latest index, at 151·7, was many points lower than that of 174·0 at the same date of last year, there was a slight increase in the index of weekly payrolls during the 12 months. The indicated earnings at the latest date aggregated $983,191; this was $24,489 lower than the payrolls disbursed at the beginning of September, 1942.

The per capita average earnings at the date under review were $21.85, as compared with $23.03 paid on or about September 1. The October 1, 1941, average had been $18.88. In considering the figures of aggregate and average earnings in logging, it must be recalled that they do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations.

Mining.—The trend in mining continued downward; returns for October 1 were received from 430 operators whose employees numbered 76,831—885 fewer than at September 1. All three branches of the industry released workers, the largest losses being in the metallic ore division. The index of employment in the mining group at October 1, at 164·3, was 9·9 per cent lower than that of 182·3 at the same date in 1941.

The weekly payrolls reported at the latest date amounted to $2,725,687, as compared with $2,769,842 indicated at September 1. The decline was thus 1·6 per cent, while that in

[1] Revised.

the number of employees was 1·1 per cent. As a result of this disparity in the percentage rates, the per capita average earnings were lower, falling from $35,64[1] at September 1, to $35.48 at the beginning of October.

Communications.—There was a curtailment in employment in the communication group as a whole at October 1, when the reported employees numbered 28,296, compared with 28,604 in the preceding month. The decrease was somewhat larger than usual for the beginning of October. The reported payroll, however, was rather higher, standing at $819,112, as compared with $806,305 paid on or about September 1. As a result of this difference in the trends of employment and payrolls, the per capita average rose from $28.19 at September 1, to $28.95 at the first of October. Based on the 1926 average as 100, the latest index of employment was 105·9; this was a few points higher than the October 1, 1941, figure of 101·5. The index number of payrolls has risen by 10·3 per cent in the twelve months.

Transportation.—There was a considerable improvement in transportation as a whole at October 1, most of which took place in steam railway operation and shipping and stevedoring. The general advance in the group was seasonal, but greatly exceeded the usual gain at October 1. The level of employment was higher than at October 1 in any other year since 1929. The latest index was 111·7, compared with 104·2 at October 1, 1941. The staffs of the 564 firms and branches furnishing returns totalled 140,729, as compared with 138,675 at September 1. The weekly salaries and wages disbursed at October 1 were given as $4,831,156, a figure only very slightly higher than that indicated at September 1. The average per capita weekly earnings fell from $34.83 at September 1, to $34.33 at the date under review. As compared with October 1, 1941, there was an increase of 7·2 per cent in employment and 12·1 per cent in the index of aggregate payrolls in transportation.

In *construction and maintenance* there was a contra-seasonal increase of 3,795 persons, bringing the reported employees to 188,660 at October 1. Building and highway work were more active; the gain in the former took place mainly in defence projects. Railway construction and maintenance departments, on the other hand, were slacker. The weekly payrolls reported by 1,514 co-operating employers were higher by 0·9 per cent; the latest aggregate was $5,307,437. The disparity in the rates of increase in the employees and the salaries and wages was mainly due to variation in the amount of overtime work, and partly to the fact that those newly added to working forces frequently come on at the lower rates of pay. The per capita average earnings fell from $28.44 paid at September 1, to $28.13 at the date under review.

The October 1 index in construction, at 149·6, was lower than that of 155·4 at the beginning of October of last year, there being a falling-off of 3·7 per cent in this comparison. However, there was an increase of 17·9 per cent in the reported payrolls in the 12 months.

Services.—Employment in the service division showed a decline which, though seasonal in character, was of less-than-usual proportions. The 616 employers from whom data were received reported a staff of 41,237, as compared with 41,918 at September 1. Of the October 1 personnel, 21,275 were females. The payrolls disbursed at the beginning of October amounted to $738,933, compared with $731,684 in the preceding period of observation.

The volume of employment was greater by 5·3 per cent than at October 1, 1941, while there was an increase of 14·9 per cent in the reported payrolls in the year. The per capita average earnings, at $17.92 at the latest date, were higher by 46 cents than at September 1, also exceeding the October 1, 1941, average of $16.40. Attention must be drawn to the fact that in hotels and restaurants, as in logging, many of those employed receive board and lodging as part of their remuneration; the former division constituted some 62 per cent of the total reported in the service division as a whole at the beginning of October.

Trade.—There was a fairly large gain in employment in trade at October 1; the improvement was seasonal according to the experience of the years since 1920, but was rather below normal in extent. Information was received from 2,207 establishments, whose personnel was increased from 156,450 at September 1, to 157,672 at the date under review. Of the latter number, 71,433 were females. The sum of $3,874,334 was paid at October 1 in weekly salaries and wages by the co-operating firms, whose payrolls at September 1 had aggregated $3,802,526. The per capita average was $24.57 at the latest date, as compared with $24.31 in the preceding report.

The index number of employment in trade at October 1 stood at 153·5, as compared with 160·9 at the same date in 1941. The latest figure, therefore, showed a decrease of 4·6 per cent in this comparison; the reported payrolls, however, were higher by 1·7 per cent.

Financial Institutions.—The number of returns received from financial institutions was 754, showing a personnel of 64,173, of whom 28,837 were women. At September 1, these

[1] Revised.

establishments had employed 64,148 persons. The weekly earnings disbursed at the date under review amounted to $1,973,743, as compared with $1,912,391 paid on or about September 1. The per capita weekly average was $30.74, as compared with $29.81 in the last report. Employment in financial institutions was greater by 1·9 per cent than at October 1, 1941, while the index number of payrolls, at 114·3, was higher by 7·8 per cent.

Employment and Payrolls by Economic Areas

Employment increased in five of the provinces, viz. Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia, while the trend was downward in the Prairie Area and in Prince Edward Island. The greatest gains were in Nova Scotia and Ontario; among the provinces showing curtailment, that in Alberta was most pronounced. The amounts disbursed in weekly payrolls at October 1 were higher than at September 1 in Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia.

Maritime Provinces.—Important expansion in industrial employment was indicated in the Maritime Provinces at October 1; the 947 co-operating establishments then reported a staff of 138,703 persons, as compared with 129,001 at the beginning of September. The number of females reported at October 1 was 17,446. The index of employment stood at 185·2, as compared with 175·4 at October 1, 1941. Substantial improvement was shown in Nova Scotia and New Brunswick, but there was a falling-off in Prince Edward Island.

Manufacturing afforded more employment in the Maritime Provinces as a whole; most of the gain was in vegetable food, textile and iron and steel plants, while animal food, lumber and pulp and paper factories were not so active. Logging, transportation and construction showed considerable increases, and there were minor gains in mining, services and trade.

The sum of $3,507,581 was disbursed in weekly payrolls at October 1; this was an increase of $81,010, or 2·4 per cent, from the wage payments reported by the same firms at September 1. Since the increase in employment took place to a considerable extent in the industries in which the rates of pay are below the average, there was a large decline in the contents of the average pay envelope, which fell from $26.56[1] paid on or about September 1, to $25.29 at October 1, 1942. The average at the same date in 1941 had been $22.92. In the last twelve months, the index of payrolls in the Maritime Provinces has risen by 14·1 per cent, while that of employment has increased by 5·6 per cent. The number of persons on the payrolls of the 917 firms furnishing data at the same date of last year was 131,225.

Quebec.—Activity in Quebec showed a further gain at October 1, when the 3,354 firms furnishing data reported 568,873 employees, of whom 139,889 were females. At the beginning of September, they had employed 563,898 persons. There was thus an increase of 0·9 per cent over the month. This gain was decidedly smaller than that recorded at October 1 in either 1940 or 1941, but approximated the average at the beginning of October in the years since 1920.

The sum of $15,856,055 was distributed in weekly payrolls at October 1; as compared with $15,599,407 paid on or about September 1; this was a rise of 1·6 per cent. The per capita average reported at September 1 had been $27.66, while the latest average was $27.87. At October 1, 1941, the per capita figure had been $24.58. The index number of employment, at 194·5, was 11·8 per cent higher than at October 1 of last year, an increase which was accompanied by that of 27·2 per cent in the reported weekly payrolls.

A large proportion of the general advance in Quebec at October 1, 1942, took place in manufacturing, notably in vegetable food, tobacco, chemical, electrical apparatus and iron and steel plants. Pulp and paper, rubber and leather works, however, were quieter. Logging, mining and communications also afforded more employment, but employment in transportation, construction and services showed curtailment. Little general change took place in trade.

At October 1, 1941, 3,182 establishments had reported a personnel of 507,253 men and women, an increase of some 12,000 from September 1.

Ontario.—The trend in Ontario continued upward, but the number of persons added to the reported staffs at October 1 was below-average, being also smaller than at October 1, 1941. Returns were received from 5,687 establishments with a working force of 555,917 men and 193,926 women. This total of 749,843 was greater by 6,709, or 0·9 per cent, than the number they had employed at the beginning of September. The reported payrolls were also higher, showing an increase of 2·5 per cent; the total was $23,064,431, as compared with $22,504,142 at September 1. The latest per capita average was $30.76, as compared with $30.29 at September 1, 1942, and $27.78 at the beginning of October, 1941. The index of employment, at 184·7 at October 1, reached

[1] Revised.

a new peak, being slightly higher than that of 183·0 at September 1, and 7·3 per cent above the October 1, 1941, figure of 172·2. The latest index of earnings was 18·4 per cent higher than a year ago.

Employment in manufacturing in Ontario showed continued, important advances; these were especially large in iron and steel and vegetable food factories, which reported 4,693 and 3,707 additional workers, respectively. There were smaller gains in beverage, electrical apparatus and non-ferrous metal factories. On the other hand, animal food, leather, lumber, pulp and paper, textile and some other classes afforded less employment. In the non-manufacturing groups, logging, mining, communications, transportation and services also showed curtailment. Construction and trade, however, were brisker.

At October 1, 1941, 5,498 employers had reported an aggregate working force of 699,141; this was nearly 13,000 more than the number they had employed at September 1, 1941.

Prairie Provinces.—Industrial activity was reduced in all three provinces in the Prairie Area at the beginning of October. Although declines have frequently been indicated at October 1, there has, on the average, been a rise in employment at that date in the years since 1920. Information for the date under review was furnished by 1,818 employers having 153,980 males and 34,224 females on their staffs; this total of 188,149 was smaller by 5,175 than that indicated at September 1, the loss amounting to 2·7 per cent. The weekly salaries and wages disbursed at the beginning of October were also slightly lower, at $5,547,823, as compared with $5,609,812 at the beginning of September. The per capita average earnings showed an increase, advancing from $29.02 at September 1 to $29.49 at the date under review.

In the last 12 months, industrial employment in the Prairie Provinces taken as a unit has increased by 3½ per cent, while there has been a gain of 12·4 per cent in the reported weekly payrolls.

The largest reductions in employment in the Prairie Area at October 1, 1942, took place in construction and maintenance. Transportation, communications, services, mining and manufacturing also released employees. Within the last-named, the lumber and pulp and paper division showed curtailment, while vegetable food factories were busier.

British Columbia.—Employment in British Columbia continued to expand, the firms reporting for October 1 having enlarged their personnel by 3,953 employees to 170,104 at the date under review, when the reported females numbered 26,834, or 15·7 per cent of the total. The gain over September 1, which was contra-seasonal in character, took place largely in manufacturing, notably of food and iron and steel products; mining, transportation, construction and trade also showed improvement. The only general declines in the non-manufacturing classes were in logging and communications. Within the manufacturing division, however, lumber and pulp and paper mills and non-ferrous metal plants released employees.

The payrolls disbursed by the establishments co-operating at October 1 aggregated $5,573,725, as compared with $5,451,420[1] at September 1. The latest per capita average was $32.77, four cents lower than in the preceding report. At October 1 of last year, 1,334 firms had made returns, showing an aggregate staff of 138,000. The contents of the typical pay envelope had then been $28.05. In the last 12 months, the index of payrolls has risen by 41·8 per cent, while that of employment, at 183·6 at October 1, 1942, was 22·9 per cent higher than at the same date of 1941. The latest figure is the maximum in the record of over 21 years.

Employment and Payrolls by Cities[1]

Industrial activity increased in seven of the eight cities for which statistics are currently tabulated. In Montreal, Quebec, Toronto, Windsor, Winnipeg and Vancouver considerable additions to the staffs were reported; there was a nominal gain in Hamilton, while employment in Ottawa showed a falling-off. The weekly payrolls report at October 1 in each of these centres were greater than at the beginning of September; the per capita averages were likewise higher than in the preceding period of observation, also exceeding those indicated at October 1, 1941.

Montreal.—Continued expansion was reported in Montreal, where manufacturing was decidedly more active, particularly in the iron and steel division. Gains on a smaller scale were indicated in vegetable food, tobacco, chemical, electrical apparatus and non-ferrous metal plants. Trade and services were rather brisker. On the other hand, transportation and construction released employees.

The 1,949 establishments co-operating at October 1 employed a staff of 267,270 persons, of whom 82,976, or 31 per cent, were females. At the beginning of September, these firms had reported 264,672 employees. The weekly payrolls received by those in recorded employment at the date under review amounted to $7,815,246, 2·4 per cent more than had been paid in salaries and wages by the same employers at September 1. Since the percentage

[1] Revised.

gain in the earnings exceeded that of one per cent in the employees, there was a considerable rise in the per capita average, which stood at $29.24 as compared with $28.83 at the beginning of September. The October 1, 1941, figure had been $25.74.

The latest index of employment, at 176·0, was 13 per cent above that at the same date of last year, while the payroll index has risen by 28·1 per cent in the 12 months.

Quebec City.—Employment showed further expansion at October 1; 231 employers reported a working force of 22,987 men and 12,524 women; this total of 35,511 persons exceeded by 1,261, or 3·7 per cent, the number reported in the preceding month. The weekly payrolls rose by 4·5 per cent, the indicated October 1 total being $881,549. The weekly average stood at $24.82, 18 cents above the previous maximum figure of $24.64 at September 1. The per capita average paid on or about October 1, 1941, had been $21.94. There were important increases in employment at the date under review in manufacturnig, mainly in chemical and tobacco works. Construction was also more active, while little general change was shown in the other non-manufacturing industries.

The 219 firms furnishing statistics for October 1, 1941, had a combined working force of 25,495. The index of employment then stood at 183·8, as compared with 248·5, at October 1, 1942. This increase of 35·2 per cent was accompanied by that of 56·2 per cent in the recorded weekly payrolls in the 12 months.

Toronto.—Further improvement was noted in Toronto, the staffs of the 1,984 reporting firms aggregating 239,780, or 3,943 more than at September 1. The gain was of about the usual seasonal proportions. Of the total personnel at October 1, 153,351 were males, and 86,429 were females. A falling-off in employment was indicated in transportation and services, but the trend in the remaining industries was generally upward. The largest increases were in trade and in manufacturing, in which iron and steel works in particular, reported further extensive gains. There were smaller advances in vegetable food, textile, electrical apparatus and non-ferrous metal manufacturing, but employment in animal food, printing and publishing and rubber factories was quieter.

The weekly payrolls reported by the employers furnishing data amounted to $7,341,521, as compared with $7,075,501 paid on or about September 1, 1942. The index of employment at the latest date, at 186·6, was the highest in the record, being 14·2 per cent above that of 163·4 at the same date of last year. The reported payrolls have risen by 26·5 per cent in the 12 months.

The per capita weekly earnings averaged $30.62 at the beginning of October, as compared with an average of $30 at September 1, 1942, and $27.74 at October 1, 1941. The number of persons then employed by the 1,894 co-operating establishments was 209,763.

Ottawa.—Moderate curtailment was reported in Ottawa; most of the loss took place in construction, other industries showing little general change. Statistics were received from 250 employers, with a staff of 21,424, as compared with 21,571 in the preceding month; of the October 1 total, the female employees constituted 32·2 per cent, numbering 6,891. The weekly salaries and wages reported at October 1 aggregated $562,091, a per capita average of $26.24. The September 1 aggregate had been $556,532, and the average, $25.80. The October 1, 1941, per capita figure was $24.49.

The index of employment in Ottawa, at 162·3, was very slightly higher than that of 161·1 at October 1, 1941, while there was in this comparison an increase of 7·7 per cent in the index of payrolls. The 243 establishments co-operating at October 1, 1941, had employed 21,222 persons.

Hamilton.—There was improvement on a small scale in Hamilton at October 1, according to statistics compiled from 352 firms with a staff of 44,476 men and 17,937 women; this total of 62,413 workers compared favourably with that of 62,266 in the preceding month. The weekly payrolls disbursed on or about October 1 amounted to $2,000,439; this was an increase of 1·3 per cent over the salaries and wages paid by the same employers at the beginning of September. The gain in employment was 0·2 per cent. The per capita average earnings advanced, rising from $31.70 in the preceding period of observation, to $32.05 at the date under review.

The trend in manufacturing continued upward at October 1; most of the improvement took place in iron and steel and vegetable food plants. The non-manufacturing groups released some employees, but the changes were not pronounced.

At October 1, 1941, 339 reports had been tabulated, showing a personnel of 55,983 men and women. Over the 12 months, the index of employment has risen by 11·6 per cent, while that of payrolls has risen by 20·5 per cent. The latest index of employment, at 191·1, is the maximum to date.

[1]The totals given in this section are those of the eight leading industries, excluding finance.

Windsor.—A substantial increase in employment was indicated in Windsor, where the 206 co-operating employers reporting a staff of 42,289, as compared with 40,357 in their last return; the October 1 figure included 6,174 women workers. The amount disbursed as weekly earnings was $1,702,828, compared with $1,599,945 at September 1. The latest per capita average was $40.07, as compared with that of $39.64 paid to the typical individual in recorded employment at September 1.

The increase in the personnel at the date under review took place mainly in iron and steel plants. Vegetable food and chemical factories, however, also showed heightened activity. In the non-manufacturing classes, construction reported improvement, while the changes in other industries were slight.

The 199 establishments furnishing data at October 1, 1941, had reported 33,044 employees. The latest index, at 311·2, was the maximum in the record, exceeding by 28 per cent that at the beginning of October, 1941. The index number of payrolls has advanced by 47·5 per cent over the twelve months.

Winnipeg.—There was a further moderate rise in employment in Winnipeg. The gain was largely in construction and trade, and in factories turning out vegetable food and iron and steel products. On the other hand, animal food and printing and publishing plants were slacker. A staff of 41,113 males and 15,519 females, or a total of 56,632 persons, was employed by the 560 firms whose returns were tabulated, and who had reported 56,039 employees at September 1. This increase of 1·1 per cent was accompanied by that of 1·5 per cent in the weekly payrolls, which aggregated $1,560,919 at October 1, as compared with $1,537,160 at September 1. The per capita average advanced from $27.43[1] at September 1, to $27.56 at the beginning of October.

The latest index number of employment, at 135·8, reached a new high at the date under review, when it was 4·1 per cent above the October 1, 1941, figure of 130·5. The increase in the index of payrolls over the twelve months has amounted to 13·5 per cent. The 558 employers whose statistics had been tabulated at the beginning of October of last year had reported 54,420 men and women on their payrolls, while the per capita weekly average earnings had then been $25.05.

Vancouver.—Continued important advances were indicated in Vancouver at the beginning of October. The increase again took place largely in manufacturing, particularly of iron and steel products. There were smaller increases in vegetable food factories, but the staffs of lumber mills were reduced. Transportation, construction, services, and trade recorded greater activity.

The 608 establishments furnishing data reported a working force of 84,452, of whom 17,351 were women. The employees reported at September 1 had numbered 81,406. The latest index, at 238·5, was 49·1 per cent higher than that of 160·0 at October 1, 1941. The persons in recorded employment at the date under review were paid the sum of $2,720,788 in weekly salaries and wages, as compared with $2,593,680 in the preceding period of observation. The index of payrolls has risen by 78·5 per cent since October 1, 1941. The per capita average, at $32.22, at the beginning of October, 1942, compared favourably with those of $31.86 at September 1, 1942, and $26.94 at October 1, 1941, when the 585 establishments furnishing information had employed 56,394 persons.

Sex Distribution of Persons Employed by Establishments Furnishing Returns at October 1, 1942

The results of a special enquiry regarding the number of females in recorded employment at October 1 are contained in this addition to the current survey of employment and payrolls; this is the first occasion in the more than 20 years in which the current statistics have been collected that such information was required on the monthly questionnaires.

In its periodical survey of employment, the Economics and Statistics Branch of the Department of Munitions and Supply collected a great deal of information regarding the number of females in industrial employment as at August 1, 1942. In certain cases, the figures of the sex distribution used in the present report are based upon such material. The records of the annual Census of Industry and other sources in the Bureau of Statistics were also drawn upon to confirm and interpret the information furnished by individual establishments at October 1, 1942.

Data showing the number of females in industry at a comparatively recent date possess considerable interest in themselves. The value of the statistics would undoubtedly be much greater were there perfectly comparable figures for an earlier period, to permit a measurement of the changes in the sex distribution of the workers in the larger establishments. Unfortunately, no strictly comparable figures are available.

[1] The comparative statistics in manufacturing are those of the Census of Industry for 1940; the monthly averages of the figures currently received in that year are given to show the extent to which the monthly surveys cover the total numbers of employees reported annually to the Census of Industry. The figures for logging are those tabulated by the Forest Products Branch for the winter of 1940-41. The comparative figures for the remaining non manufacturing industries are taken from the Decennial Census of 1931.

[2] Includes many employees elsewhere classified in the current employment statistics.

Decennial Census.—An estimate based on a ten per cent sample hand count of the latest census data indicated that at June 1, 1941, the wage-earners aged 14 years and over, numbered 2,864,620, of whom 2,164,710 were males and 699,910 were females. These estimates imply an increase of seven per cent in the number of males and of almost 28 per cent in the number of female wage-earners as compared with the figures of the 1931 census; the increase in the number of males was, of course, seriously affected by the fact that at the date of the 1941 Census, some 300,000 men had enlisted in the armed forces. The estimated number of women workers constituted 24·4 per cent of the total employees at June 1, 1941, while in 1931 the proportion of females had been 21·3 per cent.

The workers of both sexes enumerated in the Censuses include large numbers engaged in agriculture, domestic and personal, governmental, health and educational services, and other industries which are not covered in the current surveys. Thus, in 1931, these classes accounted for about 30 per cent of the total wage-earners then enumerated, and for almost 51 per cent of the women employees; the industrial distribution from the 1941 Census is not yet available. Of the wage-earners enumerated in the 1931 Census in the industries covered in the monthly surveys of employment, the proportion of women was only 16·7 per cent, 83·3 per cent of the approximately 1,475,000 persons at work in these classes at the Census date having been males.

The information now published from the 1941 Census is too fragmentary to permit any satisfactory comparison with the statistics tabulated at October 1, 1942; the above data, however, are given as being relevant to the subject, and roughly indicative of the growth in the proportion of women wage-earners in the decade.

Statistics of the Unemployment Insurance Commission.—At March 31, 1942, the number of persons insured by the Unemployment Insurance Commission was 2,465,100, of whom 655,096, or 26·6 per cent, were females; these figures are based upon registration cards received at the Dominion Bureau of Statistics between July 1, 1941, and March 31, 1942, but do not make allowance for any persons who may have left the scheme. To date, sufficient data are not available to permit the establishment of the statistical relationship which exists between the current returns on employment and payrolls and those of the Unemployment Insurance Commission. The latter, however, include a considerable number of employees not covered in the monthly returns.

Census of Industry.—For the purpose in hand (namely, the establishment of comparisons of the sex distribution of wage-earners), the most satisfactory statistics available are those of the annual Census of Industry which, however, extends only to manufacturing. The latest published material is for 1940, since when there have been far-reaching changes in the proportions of males and females in many industries. Another qualification possibly affecting the value of the comparisons is the difference in the coverage of industry, the Census taking in all establishments without reference to their size, while the current surveys are limited, in the main, to establishments ordinarily employing 15 persons and over. Thus, the 6,541 factories furnishing monthly data in 1940 constituted only 25·6 per cent of those reporting to the Annual Census, but their employees, numbering 657,418, constituted some 86 per cent of the total number employed by all factories in the Dominion. It is probable that the growth of employment in the large war industries has resulted in the inclusion of increasingly great proportions of the total wage-earners in the current surveys of employment and payrolls.

Statistics are not available to show the sex distribution of employees according to the size of establishments, but it is likely that, normally, the smaller factories tend, in general, to employ a greater-than-average proportion of female workers, for the reason that such establishments chiefly belong in the light manufacturing industries.

Another difficulty found in comparing the data of the Census of Industry and the current surveys lies in the matter of industrial grouping and classification. The basis of coding the returns in the two branches is similar, being in each case the chief component material plan. However, the different purposes for which the two series are prepared necessitate different groupings within the various industries. The Census publishes the data in much greater detail than is possible in enquiries such as the monthly surveys.

As stated elsewhere, employment in the Dominion ordinarily reaches its annual maximum at September 1 or October 1, so that under normal circumstances, the number of females employed at October 1 would be above the average for the year; most of the data here used from the 1940 Census of Industry are averages. In that year, the number of females reported in all manufacturing industries in September constituted 22·6 per cent of the total persons employed during the month, a proportion which was not much higher than that of 21·8 per cent based on the annual averages.

From the above qualifications, it is evident that the comparisons made between the sex distribution of workers according to the 1940 Annual Census of Industry and that obtained in the current survey for October 1, 1942, must be regarded as indicative of the trends, rather than as showing absolute changes in the sex distributions, or in the numbers of female wage-earners. Had it been possible to segregate the 1940 and the 1941 census data for the firms co-operating in the monthly enquiries, the comparisons would obviously have been of much greater value.

The Non-manufacturing Industries.—Comparisons for these industries have in the main to be made with the 1931 Decennial Census data, which do not afford a very satisfactory basis for the purpose, in view of (1) the lapse of time since then, characterized by great changes in industrial conditions, (2) the difference in the situation arising from the fact that 1931 was a year of declining employment, while activity generally at October 1, 1942, was brisk; only in construction was the index of employment lower at that date than in 1931, (3) differences in the industrial classifications, and (4) the seasonal influences which may differently affect the sex distribution of workers as between June 1 and October 1. It is noteworthy that in times of depression there is a tendency for male workers, in general, to be affected by unemployment to a greater extent than females; the more favourable position of the latter in this respect is largely a consequence of their concentration in the industries contributing immediately to the consumers' needs for services or commodities. This difference in the incidence of unemployment is another factor whose effect upon the 1931 data cannot be assessed, but which may have tended to raise the proportion of females as indicated in the Census taken in that year. As a result of these qualifications, the value of the comparisons of the statistics of sex distribution in the non-manufacturing classes is limited, as in the manufacturing divisions, being useful only as roughly indicative of the general direction of the trends since the Census date.

Sex Distribution of Persons in Recorded Employment at October 1, 1942

The 13,200 establishments in the eight leading industries furnishing monthly statistics of employment and payrolls at the beginning of October, reported that they then employed 1,403,353 males and 412,319 females, the former constituting 77·3 per cent, and the latter 22·7 per cent of the total personnel of 1,815,672. When the data for financial institutions are included, the figures are increased to 1,438,689 in the case of males, and to 441,156 in the case of females, the aggregate of 1,879,845 consisting of 76·5 per cent men, and 23·5 per cent women workers. As already stated, there are no entirely satisfactory figures with which these data may be compared; however, it is evident that since 1931, there have been substantial increases in the proportion of women workers in the industries included in the current surveys; at the Census date (June 1), the ratio of females in the comparable industries was 167 per thousand. The October 1, 1942, figure of 235 per thousand represents a growth of nearly 41 per cent in this proportion in the 11 years. No allowance can be made for any differences in the situation at June 1 and October 1 which may be due to seasonal causes.

Practically 71 per cent of the total of 412,319 women workers reported at October 1 by the larger establishments in the eight leading industries, were employed in manufacturing; this percentage falls to 66·4 if the figures for financial institutions are included in the all-industries total. The females in trade (71,433) constituted the second largest group, with those in finance (28,837) services (21,275) and communications (13,491) coming next in order. The remaining 13,379 women on the staffs of the co-operating firms were distributed among the logging, mining, transportation and construction divisions. In every case, the ratio of femals workers in these industries has risen since the 1931 Census was taken; except in communications, the increases in the decade have been considerable. To an important extent, the growth in many cases has undoubtedly been at the expense of other industries ordinarily employing large numbers of women, notably domestic and personal services. The remainder have been recruited from those who were formerly unemployed, adolescent girls, home-makers and other women who under ordinary circumstances would not belong to the wage-earning population.

Significant increases in the numbers and proportion of female workers have recently been indicated in manufacturing, a development which is perhaps more remarkable for the reason that a large part of the expansion in industry resulting from the war has taken place in the heavy industries. In 1940, the Census of Industry reported that 218 per thousand persons engaged in manufacturing were females, a ratio which was considerably smaller than that of 257 recorded by the larger employers at the beginning of October, 1942; the proportion of female workers per thousand in September, 1940, was 226. Thus in the two years, there has been an increase of 13·7 per cent in the proportion of women wage-earners in factories, while as compared with the 1940

average, the gain at October 1, 1942, amounted to practically 18 per cent. It is not possible to say what the variation might have been had it been practicable to exclude the smaller establishments from the Census Statistics, but it is probable that their exclusion would have lowered the 1940 ratio of female labour, resulting in a rather larger percentage gain in the comparison between the proportions in 1940 and at the latest date.

It has already been stated that the data of the annual Census of Industry are not strictly comparable with those of the monthly surveys of employment, for the reason that the former enquiries take in all manufacturing establishments without reference to size, while the latter are limited, in the main, to those ordinarily employing 15 persons and over. The probability has also pointed out that the smaller establishments excluded from the current surveys would tend to employ a rather greater-than-average percentage of female wage-earners, so that if anything, the latest figures understate the proportion of females in the total wage-earning population. Bearing in mind these qualifications, it is interesting to note that where the number of males employed by the sample firms reporting at October 1, 1942, exceeded by 35 per cent the number of men on the staffs of all manufacturing establishments in September, 1940, the number of females has risen by 60 per cent; the gain in this comparison in the number of workers of both sexes has amounted to 40 per cent in the two years.

The different groups of manufacturing showed considerable variations in the proportions of female wage-earners; these ranged from 73 per thousand in non-metallic mineral products, and 94 per thousand in lumber, to 577 per thousand in textiles and 664 per thousand in tobacco factories, in both of which the level of employment in the early autumn is above the yearly average. It is almost a foregone conclusion that normally, many of those taken on during the active season in the last two groups are females; it must also be noted, however, that no increase of any consequence was indicated in textiles from September 1 to October 1, nor was the increase in tobacco particularly pronounced. The high ratios in these two industries may be compared with the 1940 proportions of 521 per thousand in textiles and 528 per thousand in tobacco.

Approximately 29 per cent of all females reported in manufacturing at October 1 were engaged in textile factories of one sort or another. The next largest group of female workers (namely, 60,381), was reported in iron and steel plants, in which, however, the proportion of female workers was only 140 per thousand. The latter was nevertheless substantially higher than that of 61 per thousand according to the 1940 Census of Industry. Within the iron and steel division, especially large numbers of women were employed in firearm and aircraft factories, in which the ratios of females were also relatively high, viz., 350 and 234 per thousand, respectively. The third largest group of women in iron and steel belonged in automobile plants, in which, however, they constituted only 11 per cent of the total wage-earners at October 1. Chemical works provided employment for 30,427 females, who numbered 354 per thousand of the total personnel in this industry; the 1940 ratio had been 235 per thousand. An extremely large percentage of the October 1 total of women in chemical factories was engaged in the production of explosives and ammunitions, while drug manufacturing accounted for over 10 per cent of the total.

In the vegetable foods group, in which activity at October 1 was seasonally high, the number of female workers was given as 25,081, being 410 per thousand, as compared with 282 per thousand, on the average, in 1940. Important increases in the ratios of female workers were also indicated in electrical apparatus (372 per thousand, as compared with 260 in 1940), pulp and paper (204 per thousand as compared with 147 in 1940), and non-ferrous metal products (161 per thousand as compared with 101 per thousand in 1940).

In connection with these changes in proportions, attention should be drawn to the fact that the employment of greater numbers of female workers is in many cases due in part to changes in the products manufactured by individual establishments, and partly to extensive rearrangement of the procedure followed in turning out the former products, so as to permit the employment of women and girls. There has of course been a tremendous increase generally in employment in manufacturing establishments during 1941 and 1942, the industrial war effort having, on the whole, been in its preliminary stages in 1940.

The concentration of female wage-earners in the leading cities is also noteworthy, 59·5 per cent of the Dominion total at October 1 being reported by manufacturers in the following centres: Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver. This proportion is considerably higher than that of 50·4 per cent for men employees in manufacturing in these centres at the date under review.

In Montreal, 63,792 females, were employed by the co-operating factories, the proportion being 319 per thousand employees. Toronto showed a rather smaller number, namely,

61,458 females, but the ratio, at 345 per thousand, was higher than that in the Montreal area. The greatest proportion of female labour employed in manufacturing was in the city of Quebec, where 10,545 women workers were reported, being 394 per thousand.

Logging.—The female employees reported in logging appeared to be almost entirely engaged in clerical work; they numbered 788, or 18 in each thousand on the payroll. While recent press statements have indicated the employment of women in the more manual occupations in logging, the October 1 survey did not reflect this development on any important scale.

Mining.—The women reported in mining at the beginning of October numbered 1,565, or two per cent of the total staff. In the 1931 Census, the proportion of women workers was 0·6 per cent. The majority of females in mining were engaged in the metallic ore group, which employed 729 females, while non-metallic minerals, except coal, provided work for 573 women. It seems likely that such persons, gether with the 263 reported in coal mining at the beginning of October, were almost entirely engaged in office work.

Communications.—Of the aggregate of 28,296 workers employed by the co-operating communication companies, 13,491, or 477 per thousand were females. This proportion shows only a slight difference from that of 475 per thousand at the 1931 Census. The number of women reported by telephone companies was 12,267, or 586 per thousand of the total of both sexes; this ratio was slightly lower than that of 596 per thousand in 1931. In view of the fact that the substitution of mechanical for manual switchboard equipment in the last decade has largely displaced women workers, the virtual maintenance of the proportion of female workers must represent a substantial gain in the proportion of women in clerical and other occupations in the telephone industry. While the number of females reported by telegraph companies was relatively small (1,224), the proportion of 16·6 per cent was higher than that of 11·8 at the Census date.

Transportation.—The females employed in transportation at the beginning of October numbered 8,431, or 60 per thousand workers of both sexes. This proportion is double that indicated in the Census of June 1, 1931. Of the October 1 total, 4,816 women belonged in the steam railway operation group, of which they constituted only 6·2 per cent of the total employees. In 1931, the ratio had been three per cent; the number then listed under transportation included a considerable number of persons who are elsewhere classed in the code used in compiling the current statistics of employment and payrolls; however, it is likely that the proportion of women workers to males would not be appreciably affected by this difference in classification. In the street railway, cartage and storage group (including motor transportation companies), were employed 2,954 women, who constituted 7·7 per cent of the total staff reported at October 1. This proportion is not large enough to suggest any extensive substitution of women for men in other than clerical work.

Construction and Maintenance.—Of the 188,660 employees reported by the co-operating construction firms at the beginning of October, 2,595 were females, whose ratio was only 14 per thousand of both sexes. At June 1, 1931, the proportion had been one per cent. Of the October 1, 1942, total, 1,282 women were employed by building contractors, 1,186 by employers in the highway construction group, while in railway construction and maintenance only 127 females were reported.

Services.—This is the only one of the main industrial group to report a majority of female employees; the 21,275 women on the staffs of the establishments furnishing data at October 1 constituted 516 per thousand of the total for both sexes in the service group. The ratio at the Census date had been 424 per thousand. The co-operating hotels and restaurants provided work for 11,290 females; their proportion of 445 per thousand of both sexes was less than that of 630 per thousand in miscellaneous personal services, which are made up chiefly of laundry and dry cleaning plants. The females in the latter numbered 9,985. At the Census date, the ratio had been only 443 per thousand.

Trades.—The trading establishments furnishing information at the beginning of October reported 71,433 female workers, who constituted 453 per thousand employees of both sexes. This proportion substantially exceeded that of 282 per thousand at June 1, 1931. The increase in the ratio in retail trade was particularly significant; where the number of women wage-earners had formed 311 per thousand of the total reported in this industry at the Census date, the proportion at October 1, 1942, was 512 per thousand. In this comparison, it must be pointed out that retail trade is ordinarily more active at the beginning of October than in the early summer, and it is likely that under normal conditions, the growth in employment between these two dates would take place mainly among women. In wholesale trade, the proportion of females had increased from 166 per thousand at the Census date, to 261 at the beginning of October.

Finance.—The women employed in the finance group at October 1 were exceeded in

number only by those in manufacturing and trade. Of the total of 64,173 persons in the employ of the co-operating financial institutions, 28,837 were females, who formed 449 per thousand of the total employees, as compared with 297 per thousand in 1931. Banks and trust companies reported especially large staffs of women, who numbered 17,903 at the beginning of October; their proportion to the total of both sexes was 478 per thousand. At the Census date, only 6,447 females, or 234 per thousand employees, had reported themselves as at work in such institutions, so that since then there has been a very significant growth in both the number and proportion of women workers in the finance group.

Women Workers by Economic Areas

An extremely large proportion of the Dominion total of 412,319 females employed at October 1 by the co-operating establishments in the eight leading industries belonged in Quebec and Ontario, where the reported women workers numbered 139,889 and 193,926, respectively. The ratio in the former area was 339 in each thousand employees, and in the latter, 470 per thousand; these two provinces together employed practically 809 in every thousand females in recorded employment throughout Canada at the beginning of October. The proportion is very slightly lower if the statistics for financial institutions are included, but in this case, the number of women workers in Quebec rises to 147,213 and in Ontario, to 208,200. The concentration of men workers in the central provinces was much less marked, 702 per thousand of all males reported by the firms furnishing data at October 1 belonging in Quebec and Ontario.

The highest ratio of women in the provincial total for both sexes was found in Ontario, where 25·9 per cent of the reported staffs were females; including finance, the proportion was 26·7 per cent. In Quebec, 24·6 per cent of all employees in the eight leading industries, and 25·1 per cent in the nine groups, were women. In the Maritime and Prairie Provinces and British Columbia the ratios were decidedly smaller, being as follows for the eight leading industries: 12·6 per cent, 18·2 per cent and 15·8 per cent, respectively. Including financial institutions the proportions of female labour were: Maritime, 13·3 per cent, Prairies, 19·3 per cent and British Columbia, 16·5 per cent.

The concentration of females in factory employment in the provinces of Quebec and Ontario is even more striking than in all industries. Of the total of 292,741 in manufacturing at October 1, over 38 per cent belonged in Quebec and almost 50 per cent in Ontario. This proportion of 88 per cent in the two provinces did not represent any increase in the ratio from that indicated in all factories in 1940.

The women factory workers in Quebec constituted 29·7 per cent of the total employees of both sexes, while in Ontario the percentage was 27·2. Elsewhere, the proportions were decidedly lower, viz., 16·3 per cent in the Maritimes, 18·5 per cent in the Prairie Area, and 13·3 per cent in British Columbia.

The highest ratio of female workers in Quebec was in the tobacco industry, in which 69·3 per cent of the workers were women. In Ontario, the greatest proportion, of 58·2 per cent, was in textiles; this ratio exceeded that of 56·2 per cent of female labour in textile factories in Quebec, where the number of women in those industries was considerably larger than in Ontario. In the Maritime Provinces, the textile, vegetable food, trade and service groups employed larger numbers of women workers than any other industry; the highest proportions were also recorded in these classes. A fairly similar distribution prevailed in the Prairie Area where iron and steel products also provided work for a considerable number of women. Trade, vegetable foods, iron and steel and services reported the largest staffs of females in British Columbia; except in iron and steel, these industries also had a greater-than-average proportion of women workers.

As already explained, the actual numbers of persons reported in the current surveys for October 1, 1942, and those reported for 1940 should not be directly compared, the comparisons, in the main, being limited to the proportions. However, it is noteworthy that in each of the industrial groups in Canada as a whole, the number of women employed by the larger manufacturers at October 1 considerably exceeded the number reported by all factories in 1940, a situation which did not in all cases extend to the male employees. Without exception, the proportion of females in each thousand persons on the staffs, was substantially higher at the later date.

The gains which perhaps arouse the greatest interest are those which have taken place generally in iron and steel; the number of women reported at October 1 in these industries numbered 60,318, as compared with 10,056 in 1940. The former figure constituted over one-fifth of the total number in manufacturing at the date under review, while in 1940, just over six per cent of the total females in factory employment belonged in the iron and steel group. In the Dominion as a whole, the women made up 140 in each thousand persons employed in iron and steel plants at October

1, 1942, a proportion which considerably exceeded that of 61 per thousand in 1940. In Quebec, 127 per thousand were females; this ratio was more than double that of 62 per thousand according to the latest Census of Industry. In Ontario, 178 per thousand employees were women, representing a substantial increase over the proportion of 70 per thousand in 1940.

The non-ferrous metal industries now also provide employment for a much greater proportion of females than in any previous period. At October 1, 247 in each thousand workers were women and girls, while the 1940 ratio had been only 174 per thousand. Important increases in the number and the proportions of females were reported in the manufacture of electrical apparatus and in other non-ferrous metal factories.

The textile industries have always employed large numbers of women and girls, who constitute a substantial proportion of the total staffs in such factories. From 521 per thousand in 1940, the ratio of female labour in this division has increased to 577 per thousand at October 1. Another class of industries providing employment for important numbers of females is the vegetable food group, in which the ratio has risen from 283 per thousand according to the latest Census of Industry, to 395 per thousand at the date under review, when employment was seasonally active.

Among the broad groups which still employ relatively small proportions of women are the non-metallic mineral products, iron and steel (already dealt with above), and the wood and paper industries; nevertheless, the ratio of female labour in each of these has considerably increased since 1940.

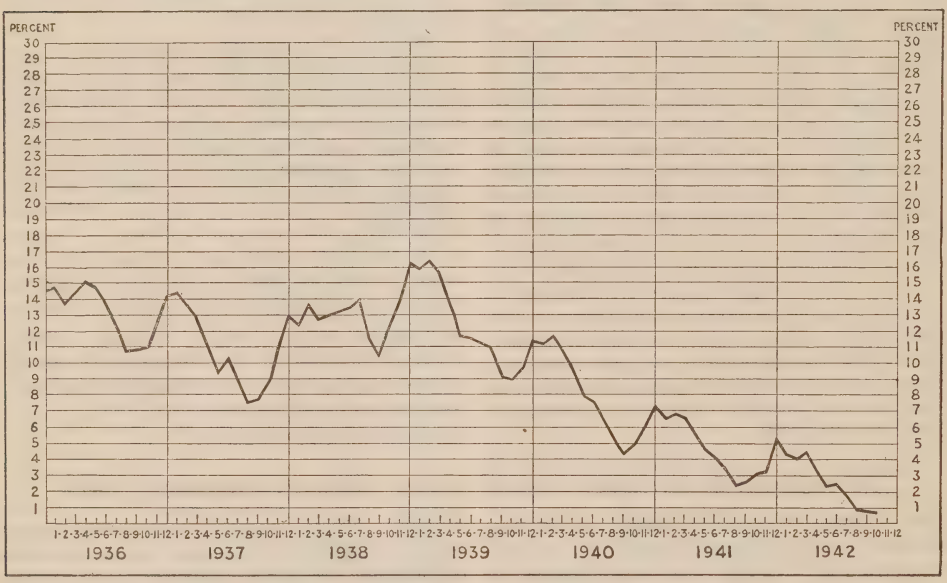
Women Workers in the Eight Leading Cities

Firms in the eight leading industries in the cities of Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, reported a staff of 245,801 females, who constituted 59·6 per cent of all women workers employed by the establishments furnishing returns at October 1. If the statistics for financial institutions are included, the number of females in the larger centres rises to 263,946, or 59·8 per cent of the Dominion total for the nine industrial groups. The proportion of women workers in the eight cities to the Dominion aggregate is considerably greater than that of 44·6 per cent for workers of both sexes. As already stated, the women employed in manufacturing establishments in the leading cities at October 1 accounted for 59·5 per cent of the total in the co-operating factories throughout the Dominion.

The cities of Toronto and Montreal provided work for greater numbers of females than any other city; in the former, 92,932 women were reported, and in the latter, 88,697. In these cities, the females constituted 36·6 per cent and 31·7 per cent, respectively, of the aggregate personnel reported in Toronto and Montreal.

In all cities, the largest groups of women workers were reported in manufacturing and trade, services taking third place as a source of employment for females. Financial institutions provided work for a considerable number of women, while the proportions of females in the remaining non-manufacturing industries in the larger cities were small.

Unemployment in Trade Unions at the Close of October, 1942



Unemployment in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades, or who are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference, only, to the organizations reporting.

Returns were tabulated in October from 2,246 labour organizations having a combined membership of 389,236 persons. Of these 2,820, or a percentage of 0·7 were reported as without work, in comparison with percentages of 0·8 in September and 3·1 in October, a year ago. Unemployment among union members at this time, was due principally to temporary lay-offs. The fractionally higher employment level in October, was traced to a moderate betterment for union members in the building and construction trades; the unemployment percentage in this group declined from 3·2 to 2·2, which was more than sufficient to offset the very slight contraction in work for members in the manufacturing industries. Employment for members of trade unions, showed an unvaried expansion since the close of June. The percentage of 0·7 for October was also the lowest for any month in these records, which were published on a monthly basis, for the first time, in January, 1919. Prior to that date the trade union report appeared quarterly.

In table I the percentages of unemployment are shown by provinces. It will be observed that these ranged from 0·2 in British Columbia to 1·2, in both New Brunswick and Quebec.

As in the preceding month, the percentages of members reported as without work were fractional in every province, with the exception of these latter two. Slightly higher employment levels than those shown in September were apparent in Nova Scotia, Quebec, Manitoba, Saskatchewan and British Columbia. In Ontario and Alberta the unemployment percentages remained unchanged, while in New Brunswick there was a fractional recession in available work. In comparison with reports tabulated in October, 1941, much more employment was apparent in Quebec, in which province the percentage declined from 4·7 to 1·2. Noteworthy expansion was apparent, likewise, in Manitoba, Saskatchewan, Alberta and British Columbia, while in Nova Scotia and Ontario there were increases in

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

work, although to a lesser degree. The percentage of unemployed members in New Brunswick remained unchanged.

A separate compilation is made each month of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. These percentages ranged from 0·2 in Toronto, Regina and Vancouver to 1·2 in Saint John. With the exceptions of Saint John and Edmonton the percentages of those without work in each of the other cities was fractional, only. In comparison with the preceding month, a moderately higher employment level prevailed in Regina; in Montreal, Toronto and Winnipeg minor improvements were apparent. In Edmonton there was a very slight betterment only, while the percentages of unemployed members in Saint John and Vancouver remained unchanged. On the other hand, in Halifax union members reported a very slight employment contraction. Compared with October, 1941, pronounced expansion was reflected in reports received from unions in Halifax, Montreal, Toronto and Vancouver. Noteworthy increases in work were manifested likewise, in Winnipeg and Edmonton, while in Regina and Saint John there were slightly higher employment levels.

The chart which accompanies this article shows the trend of unemployment from January, 1936, to date. The curve in October, 1942, rested at a fractionally lower level than in the previous month, thus indicating a very slight employment advance. The point of the curve was substantially lower than in October, 1941, thus reflecting a much higher employment level.

For the manufacturing industries 751 returns were tabulated comprising a membership of 211,517 persons, of whom, 967, or a percentage of 0·5 were without work in comparison with 0·4 in September and 2·4 per cent in October, a year ago. A slightly higher employment level prevailed for union members in the iron and steel, printing trades and for hat, cap and glove workers. As will be seen in table II, the percentages of unemployment in these trades were low. A minor improvement occurred for leather workers, in which trade the percentage of those reported as without work was 3·0; among metal polishers, etc., and jewellery workers adequate work was apparent, as compared with small fractional

percentages of unemployment in September. Trades in which union members were fully employed at both dates included soft drink, cigar and tobacco workers, electric current employees, etc., textile and carpet workers, butchers, meat and fish packers, fur, rubber, aluminum and gas workers. As in the preceding month, 0·1 per cent of garment workers, which group includes men's and women's clothing workers, were reported as without employment. The percentage of unemployed members among clay, glass and stone workers was 0·4, in comparison with 0·2, and among bakers and confectioners the corresponding percentages were 0·3 and 0·2, respectively. Woodworkers reported a very slight decline in work, although the unemployment percentage of 0·5 remained very low. The percentage of those reported as without employment among papermakers was 1·3, which indicated a moderate decrease in available work. Among chemical products workers there was a noteworthy percentage increase from full employment to 17·6, but as the membership is small, very few members were involved. Among unclassified manufacturing workers the unemployment percentage was 9·3, which was appreciably higher, thus reflecting a rather noteworthy contraction in employment. In comparison with the situation at the close of October, a year ago, as will be observed in table II, there was a much higher employment level for union members in the iron and steel and garment trades. Pronounced betterment was indicated likewise for leather and fur workers; the percentages of unemployed members in the former trade stood at 3·0, while among fur workers no unemployment was observed. The percentages of those without work in these trades a year ago were 21·7 and 12·1, respectively. Those unions in which the members were reported as having adequate work at both dates, were cigar and tobacco workers, electric current employees, textile and carpet and rubber workers. In contrast, employment for papermakers was moderately reduced, as the percentage of unemployment rose from 0·6 to 1·3.

For coal miners returns were received from 56 unions with a combined membership of 19,617 persons, of whom, 91, or a percentage of 0·5 were unemployed as compared with percentages of 0·4 in September and 2·5 in October, 1941. As in the preceding month, New Brunswick and British Columbia returns indicated that adequate work was available. In Nova Scotia the unemployment percentage of 0·7 remained unchanged, while in Alberta there was 0·2 per cent without work, in comparison with no unemployment in September. Compared with conditions in October, 1941, the percentage of unemployment in British Columbia unions indicated a rather marked betterment; union members reported that adequate work was available in comparison with an unemployment percentage of 5·2, a year ago. In Alberta, likewise, the percentage declined sharply from 5·1 to 0·2, while in Nova Scotia where 0·7 per cent were without work, there was a fractional improvement, only. New Brunswick unions did not report any unemployment at either date.

In the non-metallic minerals group there were 8 reports tabulated, in which the aggregate membership was 4,112 persons. Of these 113, or a percentage of 2·7 were listed as unemployed. This was the same percentage, as that of the preceding month; in October a year ago, the percentage of those reported as without work was 12·4.

Unions in the building and construction trades returned 216 reports, comprising a membership of 34,170 persons, of whom, 765, or a percentage of 2·2 were unemployed compared with 3·2 per cent in September and 7·7 per cent in October, 1941. In comparison with the preceding month, hod carriers and unclassified building workers and carpenters and joiners reported that 4·1 per cent and

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

2·0 per cent, respectively, of their members, were unemployed; this was in each case a moderate increase in activity. Very slight improvement was recorded for electrical workers and plumbers and steamfitters; the unemployment percentages in both of these trades remained fractional. Among bricklayers, masons and plasterers, the percentage of members reported as without work was 5·2; this was a slight employment expansion. Bridge and structural iron workers did not report any unemployment at either date. The percentage of members reported as without work among granite and stonecutters, painters, decorators and paperhangers, wood, wire and metal lathers and steam-shovel men were 4·2, 1·1, 1·1, 1·5 respectively; these were slightly higher, thus indicating minor employment recessions. In comparison with returns received in October, 1941, carpenters and joiners manifested much better conditions; the unemployment percentage as reported for these workers declined from 7·0 to 2·0. Although the memberships were not large, union members of granite and stonecutters, bridge and structural ironworkers and wood, wire and metal lathers registered pronounced employment expansion, the unemployment percentages, in these cases, were 4·2, 0 and 1·1 in comparison with 35·8, 16·9 and 35·0, respectively, a year ago. Employment for bricklayers, masons and plasterers and hod carriers and unclassified building workers likewise attained much higher levels; the percentages of members without work in these trades were 5·2 and 4·1 respectively, in comparison with percentages of 15·3 and 10·5 in October, 1941.

In the transportation industries reports were tabulated from 898 unions, having a total membership of 80,420 persons, of whom, 618, or a percentage of 0·8, were idle; this percentage was identical with that shown in September. In October, a year ago, the unemployment percentage stood at 2·4. A fractionally higher level of employment than that of September, was apparent among steam railway employees, whose returns constituted over 79 per cent of the entire group membership. Teamsters and chauffeurs were fractionally better employed, while the percentage of members, who were without work among street and electric railway employees, which stood at 0·1, remained unchanged. Among navigation workers 5·2 per cent of the members were unemployed; this was a minor employment decline. Compared with conditions in October, a year ago, navigation workers registered an important employment expansion. As will be observed in table II, an appreciable betterment was in evidence, likewise, for steam railway employees. For teamsters and chauffeurs, there was a fractional improvement, while for street and electric railway employees there was a very slight contraction in available work.

From unions in the wholesale and retail trade there were 10 returns received. These organizations had a combined membership of 2,511 persons, all of whom, as in September, were fully employed; in October, 1941, the percentage of unemployment was 0·3.

Civic employees' unions reported that 0·2 per cent of the membership was without work, in comparison with a percentage of 0·1 in both September and October, a year ago. Returns were tabulated from 106 of these unions, having a total membership of 9,748 persons, of whom, 20, were unemployed.

Reports were received from 140 unions in the miscellaneous group of occupations. These organizations had a total membership of 11,602 persons, of whom, 47, or a percentage of 0·4, were without work, in comparison with percentages of 0·5 in September and 1·8 in October, a year ago. Among unclassified workers there was no unemployment, while fractional percentages only, were shown by barbers and stationary engineers and firemen. Among theatre and stage employees 1·6 per cent of the members were listed as without work. In all of these returns minor increases in work were reflected. On the other hand, the unemployment percentage for hotel and restaurant employees rose fractionally to 0·5. In comparison with reports tabulated for October, 1941, much higher employment levels were observed among hotel and restaurant and theatre and stage employees. Stationary engineers and firemen reflected moderate improvement, as did, also, unclassified workers who were fully engaged in comparison with 1·0 per cent of inactivity a year ago; among barbers there was a fractional betterment, only.

Reports were received from 4 unions of fishermen having a combined membership of 2,567 persons of whom, 25, or a percentage of 1·0 were unemployed. The percentage of members who were without work in September was 0·9 and in October, 1941, it was 6·3.

Returns were tabulated from 2 unions of lumber workers and loggers. The total membership was 3,605 persons, all of whom, as in September, were reported as employed. The unemployment percentage in October, a year ago, was 6·5.

Table I shows by provinces the average percentage of union members who were unemployed each year from 1931 to 1941, inclusive, and also the percentage of unemployment for October of each year from 1931 to 1940, inclusive, and for each month from October, 1941, to date. Table II summarizes the returns in the various groups of industries for the months included in table I.

Building permits issued in Canada during October, 1942

The October report of building permits, compiled by the Dominion Bureau of Statistics, includes returns from 174 of the 204 municipalities in Canada which have systems for issuing such permits and of this number 156 reported detailed operations. The remaining 18 advised that no permits had been issued during the month of October while 30 municipalities had failed to report at the close of November 12.

The total value of permits reported as issued in the month of October is $8,188,606. Revised values for the month of September include returns from 200 municipalities and aggregate $10,876,969. Reports were received from 56 of the 58 original municipalities and show a value of $6,248,700 for October. The corresponding revised value for September includes 58 returns and is $7,624,268, while the October, 1941, value was $10,100,422.

The total value of permits issued by all municipalities during the ten elapsed months of the current year is $89,385,894. The value of the 58 municipalities for the same period is $64,722,795, while their corresponding value in 1941 was $85,893,750.

During the month of October new construction of all types amounted to 81·4 per cent of the total value, while the percentage of new residential construction was 56·6.

TABLE I.—VALUES AND CLASSIFICATIONS OF BUILDING PERMITS ISSUED IN CANADA, BY PROVINCES, OCTOBER, 1942

Classification of Permits	Canada	Provinces			
		Prince Edward Island	Nova Scotia	New Brunswick	Quebec
All Permits—Total Value	8,188,606	2,700	212,258	65,605	1,835,948

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, October, 1942, summarizes the August-September employment situation in Great Britain as follows:—

The number of men and boys registered at Employment Exchanges in Great Britain as wholly unemployed at September 14 (exclusive of 23,227 men who had been classified by interviewing panels as unsuitable for ordinary industrial employment) was 63,703; those registered as on short time or otherwise temporarily suspended from work on the understanding that they were shortly to return to their former employment numbered 1,532; and those registered as unemployed casual workers (being persons who normally seek their livelihood by jobs of short duration) numbered 2,597. As compared with August 17 the numbers wholly unemployed showed a decrease of 7,605, those temporarily suspended from work showed a decrease of 234, but unemployed casual workers showed an increase of 49.

The corresponding figures for women and girls at September 14, were 34,959 wholly unemployed (exclusive of those, numbering 1,084, who had been classified by interviewing panels as unsuitable for normal full-time employment), 1,177 temporarily stopped, and 140 unemployed casual workers. Of the 34,959 wholly unemployed, 1,080 had been classified as unable for good cause to transfer to another area. As compared with August 17, the numbers wholly unemployed showed a decrease of 1,267, those temporarily stopped showed a decrease of 679, but unemployed casual workers showed an increase of 19.

The number of applicants for unemployment benefit or allowances included in the foregoing totals for September 14 was 66,022, as compared with 71,108 at August 17, and 127,825 at September 15, 1941.

United States

The number of employees in non-agricultural establishments, according to the official report issued by the United States Secretary of Labor, increased by 207,000 in the month ending October 15, bringing the total to 38,555,000.

Trade as a whole showed a seasonal increase since September of 118,000, due largely to expansion in department, variety, and clothing stores, although government restrictions continued to affect many lines. Manufacturing firms reported 64,000 more wage and salaried employees in October, although a slight decline is normally expected at this time. In Federal, State, and local government departments civilian employment increased by 205,000, most of the expansion being in navy yards, arsenals and Federal war agencies. Employment declined in construction (96,000), finance-service-miscellaneous (72,000), mining (9,000), and transportation-public utilities (3,000).

About two-thirds of the 2½ million gain in non-agricultural establishments since October, 1941, was in manufacturing. Civilian Federal, State, and local government employment increased by 1,211,000, due in part to expansion in the War and Navy Departments. Smaller gains were reported by the transportation-public utility and the finance-service-miscellaneous groups. The largest decline over the year interval was in trade (391,000), where government restrictions and curtailed stocks reduced the sales of many lines. Construction employment was 115,000 and mining employment 87,000 lower than a year ago.

A small contraseasonal gain of 0·4 per cent or 52,900 in factory wage earner employment continued the almost unbroken succession of monthly gains that began with accelerated war production in June, 1940. The revised index of factory employment for October, 1942, was 154·8 on the basis of 100 for 1939. The corresponding index for June, 1940, was 102·5. The factory payroll index, which was 107·6 in June, 1940, had increased to 261·0 in October, 1942. The greater advance in payrolls than in employment over this period reflected increased working hours, overtime premiums, wage-rate increases, and expansion in war industries, where relatively higher wage scales prevail. A comparison between October, 1941, and October, 1942, showed gains of 11·4 per cent in employment and 39·8 per cent in wages.

The gains in the durable-goods group of manufacturing industries, where war production is largely concentrated, were even more pronounced. Employment showed a gain of 20·7 per cent over the year while corresponding payrolls increased 52·9 per cent. During the month employment increased by 1·8 per cent, payrolls by 4·0 per cent. Among the war industries which showed substantial employment gains were aircraft, shipbuilding, automobiles, electrical equipment, ammunition, explosives, radios, and machine-shop products. In the non-durable-goods group employment fell 1·3 per cent between September and October due largely to a seasonal decline of 39·3 per cent or 126,200 workers.

in the canning industry. Over the year interval the non-durable-goods group showed an employment gain of 1·4 per cent. Payrolls in this group increased by 2·7 per cent over the month and 19·6 per cent over the year interval.

Due primarily to material shortages and to Government restrictions on the production of goods for civilian consumption, employment declined in the cast-iron pipe, tin cans, cutlery, typewriters and jewellery industries.

All of the mining industries reported employment declines over the month and year intervals. The reductions between September and October were relatively small, ranging from 0·7 per cent in anthracite mining to 1·6 per cent in metal mining. Between October, 1941, and October, 1942, however, the declines ranged from 2·9 per cent in metal mining to 10·5 per cent in crude-oil production, reflecting a cumulative downward trend due to the difficulty of replacing men called into the armed services or absorbed into industries with higher wage scales. Payrolls showed marked gains over the year interval in bituminous-coal mining (2·8 per cent), quarrying and non-metallic mining (11·5 per cent), and metal mining (16·3 per cent), resulting from more hours worked per week as well as wage-rate increases.

Dyeing and cleaning plants reported a net contraseasonal employment gain of 1·3 per cent over September, and year-round hotels, a seasonal rise of 1·5 per cent. Laundries showed a small seasonal recession and insurance companies, a substantial decline. Employment reductions were reported by telephone and telegraph and electric light and power companies, but street railways and buses continued to report gains in number of workers due to continued demand for public transportation.

In wholesale trade employment increased slightly (less than seasonally), all of the major groups showing declines except farm products, which showed a seasonal gain of 13·7 per cent, and groceries and food specialties, which showed a slight increase. Retail employment expanded seasonally by 2·9 per cent, despite continued declines in some lines due to government restrictions on the manufacture and sale of many civilian commodities. Outstanding gains were reported by variety stores (7·4 per cent), family clothing stores (6·7 per cent), department stores (6·6 per cent), women's apparel stores (6·3 per cent), and men's and boys' clothing stores (5·4 per cent).

Wage-rate increases averaging 7·0 per cent affecting 172,000 factory wage earners, were reported by 731 out of a reporting sample of about 30,000 establishments with about 7,000,000 workers. The largest numbers of workers receiving increases were in the following industries: blast furnaces, steel works, and rolling mills (39,000), radios (9,800), woollen and worsted goods (7,900), and chemicals (5,100). Wage-rate increases in non-manufacturing industries affected only small numbers of workers.

Employment of wage and salaried workers in manufacturing industries increased from September to October in about half of the states.

Federally-financed construction showed declines from mid-September to mid-October of 25,400 for employment and $1,606,000 for payrolls. Shipbuilding employment showed a sizable gain during the month that was offset by declines on other types of projects. The declines on non-residential building, airport, and public housing construction were due to the completion of certain projects, while those on public roads, reclamation, and water and sewerage projects were due to seasonal factors.

The employment level of 2,170,000 for Federally-financed construction was 119 per cent higher than a year ago; the payroll level was 161 per cent higher. The number of persons on the direct payroll of the Federal Government in October, 1942, was 298,000, or 14 per cent of the total. All other workers engaged on Federally-financed construction were in the employ of contractors and subcontractors.

In the regular Federal services employment totalled 2,765,000—165,000 more than in September and 1,237,000 more than a year ago. Seven thousand of the new employees were hired for work inside the District of Columbia.

The addition of 18,400 workers by the National Youth Administration was the result of setting up staff on the student work program for the new school year, partially offset by curtailments on the war production training program.

Personnel on the WPA and CCC programs declined 20,000 and 700 respectively during the month.

British Unemployment at New Low

British unemployment touched a new low with only 95,442 jobless registered on November 16, it was announced recently.

A month ago the total was 101,080; a year ago it stood at 168,205, and in October, 1939, the month after war started, it was nearly 1,500,000.

The current figures do not include 23,000 men and women classified as unsuitable for any work.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

INDUSTRIAL agreements and schedules of wages and working conditions received in the Department are outlined in the LABOUR GAZETTE from month to month. It is not always possible because of limitation of space to include all agreements received each month. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Fur and Leather Products

QUEBEC, P.Q.—A CERTAIN LEATHER TANNERY AND SYNDICAT CATHOLIQUE DES EMPLOYÉS DE TANNERIES DE QUÉBEC, INC. (THE CATHOLIC UNION OF EMPLOYEES OF TANNERIES OF QUEBEC, INC.).

Agreement reached following the strike noted on page 1270 of the November issue. Agreement to be in effect from October 30, 1942 to February 10, 1943, and thereafter from year to year, subject to notice.

Only union members to be employed and new workers are to join the union, and the employer is authorized to deduct union dues and pay them to the union. The minimum wage scale is that established in the collective agreement for this industry throughout the province (LABOUR GAZETTE, March, 1940, page 282; February, 1941, page 183, August, page 1008, October, page 1313; and March, 1942, page 353). A union committee of employees to discuss grievances and questions as to working conditions with the employer.

Manufacturing: Printing and Publishing

WINNIPEG, MANITOBA.—WINNIPEG NEWSPAPER PUBLISHERS AND THE WINNIPEG NEWSPAPER PRINTERS' ASSOCIATION.

The agreement which came into effect March, 1, 1937, and was summarized in the LABOUR GAZETTE, November, 1937, and December, 1938, was renewed from March 1, 1942, for the duration of the war and six months thereafter. The weekly wage rate was fixed at $43.72 for day work and $45.72 for night work.

Manufacturing: Miscellaneous Wood Products

PRICEVILLE, QUEBEC.—A SAW AND PLANING MILL OPERATING COMPANY AND LE SYNDICAT CATHOLIQUE DE L'INDUSTRIE DE BOIS DE PRICEVILLE, INC. (THE CATHOLIC UNION OF THE WOOD INDUSTRY OF PRICEVILLE, INC.).

Agreement reached following the strike mentioned in the LABOUR GAZETTE, October, page 1134, and conciliation by an officer of the Department of Labour. Agreement to be in effect from November 15, 1942, to December 31, 1943, and thereafter from year to year, subject to notice.

Preference to be given union members when hiring new workers, qualifications being equal. The Company to invite all eligible permanent employees to join the union. Hours: 60 per week; overtime at time and one half; work on Sundays and holidays double time. Hourly wage rates for some classes: foremen 52 and 57½ cents, engineer 47 cents, firemen 34½ cents, band saw sawyers 72 cents, blacksmith 45 cents, carpenter 38 cents, filers 49 to 60 cents, others 29 to 59 cents, planing mill 23 to 38½ cents. A cost-of-living bonus of $3.25 per week is to be paid. Provision is made for the adjustment of disputes.

RIMOUSKI, QUEBEC.—A SAWMILL AND BOX FACTORY OPERATOR AND LE SYNDICAT CATHOLIQUE DE L'INDUSTRIE DE BOIS DE RIMOUSKI, INC. (THE CATHOLIC UNION OF THE WOOD INDUSTRY OF RIMOUSKI, INC.)

Agreement reached following the strike mentioned in the LABOUR GAZETTE, October, page 1134, and conciliated by an officer of the Department of Labour. Agreement to be in effect from November 15, 1942, to December 31, 1943, and thereafter from year to year, subject to notice.

This agreement is the same as the agreement noted above for Priceville, except for the wage scale. Hourly wage rates for some classes: assistant foremen 47 and 58 cents, electricians 39 cents, planer operator and mechanic 57½ cents, band saw sawyers 78 and 82 cents, resaw sawyers 42 cents, edger sawyers 43½ cents, filers 47 to 57½ cents, blacksmith 45 cents, carpenter 44 cents, certain other classes 28 to 45½ cents. A cost of living bonus of $3.25 per week to be paid.

Manufacturing: Metal Products

SAINT JOHN, N.B.—A MANUFACTURER OF BOILERS AND TANKS AND THE CANADIAN STEELWORKERS' UNION, LOCAL NO. 3.

Agreement to be in effect from August 28, 1942, to March 1, 1943, and thereafter from year to year, subject to notice.

Hours: 8 per day, 4 on Saturdays, a 44-hour week; where three shifts are worked, 8 hours to be a shift. Overtime is payable at time and one half for first four hours and double time thereafter; double time also for work on Sundays and legal holidays. Minimum wage rate for mechanics is 80 cents per hour, with a corresponding increase of 3 cents per hour for all helpers and machine operators; 10 cents per hour extra for work in the way of oil, as in oil tanks, boilers, etc.; gang foremen to receive 10 cents per hour extra. Provision is made for the adjustment of disputes.

LONGUEUIL, P.Q.—DOMINION ENGINEERING WORKS (LONGUEUIL PLANT) AND THEIR HOURLY RATED EMPLOYEES REPRESENTED BY THE METAL TRADES COUNCIL OF MONTREAL AND VICINITY.

This agreement was reached during proceedings of a board under the Industrial Disputes Investigation Act, and is to be in effect from November 23, 1942, to November 22, 1943, or for another year if no notice of termination given. It is printed on page 1390 of this issue.

BOWMANVILLE, ONTARIO.—A CERTAIN FOUNDRY AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2375.

Agreement in effect from May 10, 1942, to October 1, 1943 or 1944 if no notice given. The company recognizes the union as the sole bargaining agency for its employees.

Hours: 50 per week; overtime is payable at time and one-half. Hourly wage rates: moulders 50 to 70 cents, learners 35 to 45 cents, machinists and lathe hands 45 to 55 cents, cupola tenders 45 to 50 cents; sand last operators, annealing ovens, core making, grinding, plating, water mills, shipping, rough carpenters, labourers, 40 to 45 cents; female employees and juveniles 25 to 30 cents. The cost-of-living bonus to continue to be paid as at present, subject to change in accordance with Order in Council P.C. 5963 and any amendments thereto. Provision is made for seniority rights and for the settlement of grievances.

OSHAWA, ONTARIO.—A CERTAIN ENGINEERING FIRM AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2784.

Agreement to be in effect from October 9, 1942, to January 1, 1943. The company agrees that the union is the sole collective bargaining agency for its employees. The company will not attempt to influence any employee against union membership or activity and the union agrees not to intimidate any employee for any purpose.

Hours: 48 per week; overtime at time and one-half. Hourly wage rates: apprentices 25 to 65 cents, improvers 65 to 90 cents, machine hands 70 cents to $1.15, toolmakers 95 cents to $1.25, diemakers $1.05 to $1.30. Vacation: one week's vacation with pay for employees with one year's service. Provision is made for seniority rights and for the settlement of grievances.

WHITBY, ONTARIO.—WHITBY MALLEABLE IRON AND BRASS CO. LTD., AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2458.

Agreement reached through an Industrial Disputes Inquiry Commissioner, as noted in the LABOUR GAZETTE, October, page 1125. This agreement which came into effect September 28, 1942, for the period of one year, replaces the previous agreement between this foundry and its employees which was noted in the LABOUR GAZETTE, December, 1941, page 1565. The company agrees not to attempt to influence any employee against union membership or activity. Hours: 45 per week; time and one-half for overtime and for all work on Sundays and holidays. Wages: changes in wage rates will be made as approved by the Regional War Labour Board. Cost-of-living bonus: the Company will conform to changes in cost-of-living bonuses as called for from time to time by Dominion Government announcements. Vacation: one week's vacation with pay for employees with one year's service. Provision is made for seniority rights and for the adjustment of grievances.

PRESTON, ONTARIO.—A CERTAIN FOUNDRY AND THE INTERNATIONAL MOULDERS' UNION, LOCAL 314.

Agreement to be in effect from April 22, 1942, to January 31, 1943. Hours: 8 per day. Wages: piece rates as set, the day rate for moulders is $6.45; apprentice moulders to start at 35 cents per hour for first year. The cost-of-living bonus to be revised in accordance with the index issued by the Department of Labour.

LONDON, ONTARIO.—A CERTAIN FOUNDRY AND FEDERAL UNION NO. 25 (TRADES AND LABOUR CONGRESS OF CANADA).

Agreement to be in effect from January 23, 1942, to February 1, 1943, and thereafter from year to year, subject to notice. Hours 9 per day, 5 on Saturdays, a 50 hour week except when three shifts per day worked, when week is 48 hours. Overtime at time and one-half. The management and the union committee to set piece work prices; a minimum hourly rate of 40 cents per hour, except for boys and apprentices of 16 years of age with a minimum of 25 cents and a 5 cent increase each six months. The cost-of-living bonus being paid when the agreement was made ($1.88 per week) to be adjusted with changes in the cost-of-living index number. Vacation: one week's vacation with pay after two years' service. Seniority rights are provided for.

WINDSOR, ONTARIO.—CHRYSLER CORPORATION OF CANADA, LTD., AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

Agreement reached following the report of a board under the Industrial Disputes Investigation Act (LABOUR GAZETTE, April, page 396, and October, page 1125). Agreement to be in effect from September 1, 1942, to June 30, 1943, and thereafter from year to year, subject to notice. The company recognizes the union as the bargaining agent for hourly rates employees who are members of the union. Employees are free to join or not to join any union; no discrimination by the company or by union members against any employee for being or not being a union member.

Hours: at the time of signing the agreement the regular hours were 8 per day, 5 days per week, a 40 hour week, with time and one-half for overtime and for all work on Sundays and holidays. A 5 per cent premium was being paid to employees on the second or third shift. Provision is made for seniority rights and for the settlement of grievances.

OJIBWAY (NEAR WINDSOR), ONTARIO.—CANADIAN STEEL CORPORATION LTD. AND THOSE OF ITS HOURLY RATED EMPLOYEES WHO ARE MEMBERS OF THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

Agreement reached following the report of the board under the Industrial Disputes Investigation Act (LABOUR GAZETTE, August, page 890) and further conciliation by officers of the Department of Labour, as noted on page 1377 of this issue. Agreement to be in effect from October 1, 1942, to October 1, 1943, and thereafter from year to year, subject to notice. The company recognizes a plant committee of employees who are union members. Employees are free to join or not to join any union; no discrimination by the company or by union members because of an employee being or not being a union member. Provision is made for seniority rights and for the settlement of grievances.

OJIBWAY (NEAR WINDSOR), ONTARIO.—THE CANADIAN BRIDGE CO. LTD. AND THOSE OF ITS HOURLY RATED EMPLOYEES WHO ARE MEMBERS OF THE INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 195.

Agreement reached following the report of the board under the Industrial Disputes Investigation Act (LABOUR GAZETTE, August, page 890) and further conciliation by officers of the Department of Labour, as noted on page 1377 of this issue. Agreement to be in effect from October 1, 1942, to September 30, 1943, and thereafter from year to year, subject to notice.

The provisions of this agreement are similar to those of the agreement noted above for the Canadian Steel Corporation Ltd. also at Ojibway.

REGINA, SASK.—REGINA INDUSTRIES LTD. AND THE INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 520.

Agreement in effect from September 1, 1942, for the duration of the war, but amendments may be made after 30 days' notice if agreed upon. The company recognizes the union as the bargaining agency for the employees, but employees are free to join or not to join the union; no discrimination to be shown by the company or by union members against any employee for being or for not being a union member. Provision is made for seniority rights and for the settlement of disputes.

The agreement provided that existing hours and wage rates remain in effect until approval of changes had been made by the Regional War Labour Board. This Board directed on September 24 (with amendment dated October 16) that from the payroll period commencing on or after September 12, the following conditions and wage rates apply: Hours at 8 per day, a 48 hour week, employees working on any of three daily shifts be allowed ½ hour for lunch without loss of pay, time and one-half for overtime and for all work on employee's regular day off and on holidays. Hourly wage rates for certain of the classes of workers: power house engineers and journeymen millwrights, tool grinders, fitter, plumber, steamfitter, pipefitter, blacksmith 70 to 85 cents; journeymen arc welders and machinists 75 to 90 cents; draftsman and tool designer, journeyman set-upman and tool or die makers 75 to 95 cents; experienced arc welders (not journeymen) 65 to 85 cents; acetylene generator operators, general maintenance labourer, journeymen helpers, power house fireman, burring and cleaning operators 55 to 65 cents, clerical hourly workers 50 to 65 cents, car loaders 50 to 60 cents, junior draftsmen 45 to 65 cents; watchmen, janitors and sweepers and male employees under 18 years, 45 to 55 cents; female hourly rate workers 45 to 75 cents; all hourly rate employees not classified including unclassified specialists in journeymen trade who are not journeymen 55 to 80 cents; apprentices to serve at least 3½ years and to be paid from 40 cents to 60 cents; group leaders to be paid 5 cents per hour over maximum rate. A cost-of-living bonus to be effective from August 15, 1942, based on the change in the cost-of-living index number between October, 1941, and July, 1942, to be adjusted thereafter as directed by the National War Labour Board.

VANCOUVER, B.C.—CERTAIN FOUNDRIES AND THE MOULDERS AND FOUNDRY WORKERS' UNION, LOCAL NO. 1, CANADIAN CONGRESS OF LABOUR.

Agreements to be in effect from October 1, 1942, to September 30, 1943, and thereafter from year to year, subject to notice. The companies recognize the union; no discrimination by either party because of an employee's union affiliation.

Hours: 8 per day, 44 per week for day shift; if a second shift employed, 7½ hours to be worked, 3¾ hours on Saturday, with pay for 8 hours, 4 hours on Saturday; if a third shift employed, 7 hours to be worked, 3½ on Saturday, with pay for 8 hours, 4 hours on Saturday. Overtime is payable at time and one-half for first four hours and double time thereafter; double time for all work on Sundays and holidays. Minimum hourly wage rates: moulders and coremakers, electric furnacemen, acetylene burners and welders, electric welders, 90 cents; cupola tender, electric cranemen handling molten metal, 72½ cents; electric cranemen on night shift, chippers and grinders, steel annealer, box carpenter, brass mixer, 65 cents; foundry helpers 60 cents; in agreements at two foundries, machine moulders are added at 85 per cent of the moulders' scale. The cost-of-living bonus to be continued and adjusted in accordance with the federal government 1942 Order in Council P.C. 5963 and amendments. Apprenticeship system to be maintained, with not more than one apprentice to each five journeymen. Provision is made for the settlement of grievances.

In the agreements for some foundries, it is provided that when the union is unable to supply skilled moulders or coremakers, other men in the foundry, not exceeding one to ten journeymen, may be promoted on trial, to receive an increase of 10 cents per hour after two months, another 10 cents after three more months and the full journeymen's rate at the end of eight months.

VICTORIA, B.C.—CERTAIN FOUNDRIES AND THE INTERNATIONAL MOULDERS AND FOUNDRY WORKERS' UNION, LOCAL 144.

Agreement in effect from September 1, 1941, for the duration of the war and wartime contracts unless changed by mutual consent. The companies recognize the union; no discrimination against any employee because of his union affiliation.

Hours: 8 per day, 44 per week for day shift; for second shift, 7½ hours' work with 8 hours' pay; for third shift, 7 hours' work with 8 hours' pay. Overtime is payable at time and one-half for first four hours and double time thereafter; double time for work on Sundays and holidays. Minimum hourly wage rates: moulders and coremakers 90 cents, cupola tender 72½ cents, chippers and grinders 65 cents, helpers 60 cents. A cost-of-living bonus of 4 cents per hour was stipulated, with adjustment with changes in the cost of living. Provision is made for the settlement of disputes.

Manufacturing: Shipbuilding

HALIFAX, N.S.—HALIFAX SHIPYARDS, LTD. AND THE INDUSTRIAL UNION OF MARINE AND SHIPBUILDING WORKERS OF CANADA, LOCAL NO. 1.

Agreement to be in effect from November 16, 1942, to November 16, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1941, page 1310, with these exceptions:

Wages to be paid in accordance with the provisions of Order in Council, P.C. 3471 of April 28, 1942 (LABOUR GAZETTE, May, page 561), subject to any increases that may be directed to be paid by the National War Labour Board. The cost-of-living bonus to be paid as provided in the above Order in Council, P.C. 3471, subject to the provisions of P.C. 5963. Charge hands are governed by this agreement. The apprenticeship system to be carried on.

SAINT JOHN, N.B.—SAINT JOHN DRY DOCK AND SHIPBUILDING CO. LTD., AND UNITED BROTHERHOOD OF CARPENTERS, LOCAL 840.

Agreement in effect from March 1, 1942, to March 1, 1943, and thereafter from year to year, subject to notice. This agreement is

similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1941, page 1310, with this exception:

Wages: the minimum hourly wage rates for journeymen carpenters is 80 cents (an increase of 5 cents per hour), for improvers 51 to 69 cents. A cost-of-living bonus equal to a 7·4 point rise in the index number to be paid from August 15, 1942, with subsequent increases with increases in the cost of living as provided in P.C. 5963 of July, 1942.

SAINT JOHN, N.B.—SAINT JOHN DRY DOCK AND SHIPBUILDING CO. LTD., AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL B 502.

Agreement to be in effect from March 1, 1942, to March 1, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1941, page 851, and May, 1941, page 513, with these exceptions:

When two or three shifts are worked, ½ hour allowed for lunch during shift. Wages: the hourly rate for journeymen electricians is 80 cents (an increase of 3 cents), for helpers 53 cents, for improvers 55 to 70 cents, for temporary lighting men 55 cents. Apprenticeship: at the discretion of the company, wage rates for apprentices may be increased, and by mutual consent the term of apprenticeship may be shortened. A cost-of-living bonus equal to 9·7 points rise in the cost-of-living index number to be paid to improvers and temporary lighting men, and a 7·4 points rise in the cost-of-living index number to journeymen electricians and helpers, all as from August 15, 1942. For all work in the way of oil, as in oil tanks, etc., a bonus of 5 to 10 cents per hour to be paid; if tanks have not been properly steamed out, a bonus of 40 cents to be paid.

SAINT JOHN, N.B.—SAINT JOHN DRY DOCK AND SHIPBUILDING CO. LTD., AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 482.

Agreement to be in effect from March 1, 1942, to March 1, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1941, page 851, with these exceptions:

Wages: the hourly rate for machinists and fitters is 80 cents (an increase of 3 cents), helpers 53 cents. A cost-of-living bonus, equal to a 7·4 points rise in the cost-of-living index number, to be paid from August 15, 1942, and subsequent increases as ordered by the National War Labour Board as provided in the federal government 1942 Order in Council 5963. Apprenticeship: at the discretion of the company the wage rates for apprentices may be increased, and by mutual consent the term of apprenticeship may be shortened.

SAINT JOHN, N.B.—SAINT JOHN DRY DOCK AND SHIPBUILDING CO. LTD. AND THE UNITED ASSOCIATION OF JOURNEYMEN PLUMBERS AND STEAMFITTERS, LOCAL 213.

Agreement to be in effect from March 1, 1942, to March 1, 1943, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July, 1941, page 852, and May, 1941, page 511, with these exceptions:

Wages: the hourly rate for plumbers, steamfitters and fitters is 80 cents (an increase of 3 cents), helpers 53 cents, improvers 55 to 70 cents. A joint committee to determine and administer a policy for improvers and to regulate their advancement to the journeyman's rate. The general policy for apprentices is to be agreed upon between the company and the committee. A cost-of-living bonus equal to a 9·7 points rise in the cost-of-living index number to be paid to improvers and equal to a 7·4 points rise to journeymen plumbers, steamfitters, fitters, helpers and apprentices, all payable from August 15, 1942, with further increases as ordered by the National War Labour Board as provided by the federal government 1942 Order in Council P.C. 5963.

VICTORIA, B.C.—VICTORIA MACHINERY DEPOT CO. LTD. AND MOULDERS AND FOUNDRY WORKERS' UNION, LOCAL NO. 2.

Agreement and supplementary agreement to be in effect from May 1, 1942, for the duration of the war and wartime contracts. This agreement is similar to the one between this company and their foundry employees, previously in effect and published in the LABOUR GAZETTE, December, 1941, page 1575, and April, 1942, page 482, with these exceptions:

Only union members to be employed. Shipyards work three shifts per day, 7 days per week, but individuals work six days, with one day off per week. For the day shift, 48 hours' work with 50 hours' pay, the night shift, 46 hours' work with 54 hours' pay, the "graveyard shift 43 hours' work with 54 hours' pay. Cost-of-living bonus to be paid as provided in the federal government 1941 Order in Council P.C. 8253.

Manufacturing: Non-Metallic Minerals, Chemicals, Etc.

SAINT JOHNS, QUEBEC.—A CERTAIN MANUFACTURER OF VITREOUS EARTHENWARE AND THE NATIONAL BROTHERHOOD OF OPERATIVE POTTERS, LOCAL 78.

The agreement which came into effect October 1, 1941, and was summarized in the LABOUR GAZETTE, December, 1941, page 1566, was renewed from October 5, 1942, to September 30, 1943. Provision is made for the adjustment of the cost-of-living bonus in accordance with orders of the National War Labour Board.

HAMILTON, ONTARIO.—HAMILTON BY-PRODUCT COKE OVENS LTD. AND INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL 700.

Agreement to be in effect from October 1, 1941 to October 1, next following the ending of the war, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1941, page 1566, with this exception: A cost-of-living bonus was provided for in accordance with the federal government 1941 Order in Council P.C. 7440 and as further prescribed by the federal government.

THOROLD, ONTARIO.—THE EXOLON COMPANY AND FEDERAL LOCAL 22689, AMERICAN FEDERATION OF LABOR.

The cost-of-living bonus as paid at May 1, 1942 to be continued. Provision is made for seniority rights and for the settlement of grievances.

VANCOUVER, B.C.—GYPSUM, LIME AND ALABASTINE, CANADA LTD. AND GYPSUM WORKERS' UNION, No. 578.

Agreement reached through conciliation by an officer of the Department of Labour. Agreement to be in effect from August 3, 1942, for the duration of the war and three months thereafter. The company recognizes the union committee; no discrimination against any employee on account of union activity.

Hours: 48 per week; overtime at time and one half; double time for work on Sundays and holidays except for kiln men. Wages and cost-of-living bonus to be continued at rates in effect when the agreement was made unless varied by order of the Regional War Labour Board or other authorized authority. Kiln man to be paid for 8½ hours for each 8-hour shift and shall be allowed time for lunch in that shift. Provision is made for seniority rights and for the settlement of grievances.

Construction: Buildings and Structures

CANADA.—ELEVATOR MANUFACTURERS AND INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS.

The terms of this agreement were summarized in the LABOUR GAZETTE, February, 1940, page 169, and the 1941 wage rates were reported in December, 1941, page 1567. The hourly wage rates reported by various locals on or about May 1, 1942 for elevator mechanics and their helpers on construction work: Halifax—97 cents for mechanics, 68 cents for helpers; Saint John, N.B.—90 cents for mechanics, 63 cents for helpers; Quebec, P.Q.—90 cents for mechanics, 63 cents for helpers; Ottawa—$1 for mechanics, 70 cents for helpers; Toronto—$1.10 for mechanics, 77 cents for helpers; St. Catharines, London and Kitchener—$1 for mechanics, 70 cents for helpers; Windsor—$1.12 for mechanics, 78 cents for helpers; Edmonton—$1.04 for mechanics, 73 cents for helpers. On contract maintenance work, the rates are 90 per cent of the regular rates.

CANADA.—CANADIAN AUTOMATIC SPRINKLER ASSOCIATION AND UNITED ASSOCIATION OF PLUMBERS, LOCAL 379 (AUTOMATIC SPRINKLER FITTERS).

Under the agreement of February 20, 1941, which covers throughout Canada, the installation of sprinkler systems or systems used for fire extinguishing purposes, which was noted in the LABOUR GAZETTE, December, 1941, page 1567, the wage rate was adjusted September, 1941, to 97 cents per hour when working in their home towns and $1.22 when working out of town (increases of 3½ cents per hour).

TORONTO, ONTARIO.—CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCALS 587, 864, 1003 AND 1080.

Agreement in effect from April, 1942, to March 31, 1943, and thereafter from year to year, subject to notice. Only union members to be employed. Hours: 8 per day, Monday to Friday, a 40-hour week. Saturday between 8 a.m. and 5 p.m. to be paid at time and one-half except emergency work on Saturday which may be done for less than the regular Saturday overtime rate if satisfactory proof is furnished to the union; double time after 8 hours' work. For work on Sundays and holidays, double time. Basic minimum wage rate is 85 cents per hour except for spray painting which is 95 cents.

TORONTO, ONTARIO.—CONTRACTING PLASTERERS' SECTION OF THE BUILDERS' EXCHANGE AND CONSTRUCTION ASSOCIATION OF TORONTO AND THE WOOD, WIRE AND METAL LATHERS' INTERNATIONAL UNION, LOCAL 97.

The agreement which came into effect June 1, 1941, and was summarized in the LABOUR GAZETTE, December, 1941, page 1567, was amended from January 1, 1942, to provide for an increase of 10 cents per hour for nail on lathing on wood furring, making this rate 85 cents. (The rate for metal furring, etc., remains at $1.10 per hour.)

HAMILTON, ONTARIO.—MASTER PAINTERS' ASSOCIATION OF HAMILTON AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL 205.

Agreement in effect from May 1, 1942, to April 30, 1943, and thereafter subject to 30 days' notice. Union shop conditions will prevail and preference given union men. Hours: 8 per day, 4 on Saturdays, a 44-hour week. For work on night shift, 9 hours' pay for 8 hours' work. Overtime at time and one half; work on Sundays and holidays, double time. Minimum wage rate for painters and paperhangers: 80 cents per hour; spray painting 95 cents (increases of 5 cents per hour over the previous rates.)

WINDSOR, ONTARIO.—BUILDERS' AND CONTRACTORS' ASSOCIATION OF ESSEX COUNTY AND THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION OF AMERICA, LOCAL No. 6 (BRICKLAYERS).

This agreement which came into effect for the period November 18, 1941 to March 31, 1942, and thereafter from year to year subject to notice, remains in effect for the year 1942-1943. Hours: 8 per day except when two or more shifts are employed, when 7 hours will be worked, with 8 hours' pay and one-half hour for lunch. Double time for overtime including all work on Saturdays, Sundays and holidays. Wage rate for bricklayers and stone masons: $1.20 per hour. Provision is made for the settlement of disputes.

SAULT. STE. MARIE, ONTARIO.—CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL 446.

Agreement in effect from July 16, 1941, to February 1, 1942, and thereafter from year to year, subject to notice. Hours: 8 per day, 48 per week; employees on night shifts to receive 8 hours' pay for 7 hours' work. Overtime at time and one-half for first three hours and

double time thereafter; double time for work on Sundays and holidays. Minimum wage rate for carpenters: 85 cents per hour, helpers' rate to start at 50 cents, and one helper allowed to every three carpenters.

REGINA, SASKATCHEWAN.—REGINA BUILDERS' EXCHANGE AND THE UNITED BROTHERHOOD OF CARPENTERS, LOCAL 1867.

Agreement to be in effect from May 15, 1942 to May 14, 1943, and thereafter from year to year, subject to notice. This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, September, 1941, page 1157, with this exception: To the minimum wage rates of 90 cents for carpenters, $1 for foremen, a cost-of-living bonus of 5 cents per hour was added, effective from July 16, 1942 until May 15, 1943, when the bonus will be redetermined.

VICTORIA, B.C.—VICTORIA BUILDERS' EXCHANGE LTD. AND UNITED BROTHERHOOD OF CARPENTERS, LOCAL 1598.

Agreement to be in effect from September 14, 1942 to September 13, 1944, or for the duration of the war, subject to 60 days' notice of amendments. Hours: 8 per day, 4 on Saturdays, a 44-hour week. Overtime: time and one-half for first four hours: thereafter and all work on Sundays and holidays, double time. The basic wage rate remains at 90 cents per hour, but the cost-of-living bonus is now fixed at 10 cents per hour for all time worked during the regular working day or week, this bonus subject to adjustment annually.

Transportation and Public Utilities: Electric Railways

CORNWALL, ONTARIO.—CORNWALL STREET RAILWAY, LIGHT AND POWER CO. AND AMALGAMATED ASSOCIATION OF STREET, ELECTRIC RAILWAY AND MOTOR COACH EMPLOYEES OF AMERICA, LOCAL 946.

Agreement to be in effect from May 1, 1942, to April 30, 1943, and thereafter from year to year, subject to notice. COLLECTIVE AGREEMENT ACT, QUEBEC

Recent Proceedings Under the Act

THE Collective Agreement Act was assented to June 22, 1940, and was summarized in the LABOUR GAZETTE, August, 1940, page 812. It replaces the Collective Labour Agreements Act, 1938. Agreements and regulations under the "Collective Labour Agreements Act," the "Act respecting Workmen's Wages" and under the original Act, "The Collective Labour Agreements Extension Act, 1934," continue in effect for the period for which they were made or have been renewed or amended. Under the Collective Agreement Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreements which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act made obligatory on all employers and employees in the trade, industry, commerce or occupation throughout the province or within the district determined in the agreement. Notice of such application is published and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period, if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable with due regard to economic conditions, an Order in Council may be passed granting the application and making the provisions of the agreement obligatory from the date the Order in Council is adopted. The Order in Council may be amended or revoked by a further Order in Council on the recommendation of the Minister of Labour after consulting the parties to the agreement and after the required notice has been published in the *Quebec Official Gazette*. A parity committee (formerly called a joint committee) must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and noted in the *Quebec Official Gazette*, the committee is constituted a corporation. A parity committee may require certificates of competency from workers within the scope of the agreement and such by-laws must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act were noted in the issues from July, 1937, to April, 1938. Proceedings under the Collective Labour Agreements Act are noted in the issues from May, 1938, to July, 1940. Proceedings under the Collective Agreement Act are noted in the issues beginning August, 1940.

Recent proceedings under the Act include the extension of one new agreement and the amendment of eight others, all of which are summarized below. A request for the extension of a new agreement for retail food stores in Quebec was published in the *Quebec Official Gazette*, November 21. Requests for the amendment of certain agreements were published in the *Quebec Official Gazette*, as follows: building trades at St. Hyacinthe, in the issue of November 7; barbers and hairdressers in Missisquoi County and the tannery industry throughout the Province, in the issue of November 14; barbers at Sherbrooke and the dress manufacturing industry throughout the Province, in the issue of November 21; clerks and accountants in Chicoutimi and the Lake St. John district, building trades at Three Rivers, and building trades at Sherbrooke, in the issue of November 28.

In addition, Orders in Council were published in the *Quebec Official Gazette* during November, approving or amending the constitution and by-laws of certain parity committees, and others approving the levy of assessments or amending previous Orders in Council in this connection, for certain other parity committees.

Manufacturing: Vegetable Foods

BAKERS, THREE RIVERS

An Order in Council, dated November 12, and published in the *Quebec Official Gazette*, November 21, corrects the previous Order in Council (LABOUR GAZETTE, November, 1942, page 1347) which had amended previous Orders in Council (LABOUR GAZETTE, March, 1938, page 334 and March, 1940, page 281). For distributors of bread, cake and pastry, the cost of living bonus is equivalent to a 2·4 point rise representing the change in the cost of living between October 1, 1941, and July 1, 1942. The cost of living bonus shown in the LABOUR GAZETTE, November, 1942, page 1347 applied only to journeymen bakers and their apprentices.

Manufacturing: Fur and Leather Products

TANNERY INDUSTRY, PROVINCE OF QUEBEC

An order in Council, dated November 5, and published in the *Quebec Official Gazette*, November 7, amends the previous Orders in Council for this industry (LABOUR GAZETTE, March, 1940, page 282; February, 1941, page 183, August, page 1008, October, page 1313; March 1942, page 353, and September, page 1097), by an amendment which does not alter the clauses summarized in the LABOUR GAZETTE.

FUR MANUFACTURING INDUSTRY (RETAIL TRADE), MONTREAL

An Order in Council, dated November 20, and published in the *Quebec Official Gazette*, November 28, amends the previous Orders in Council for these workers (LABOUR GAZETTE, September, 1940, page 971, and December, 1941, page 1572) by changing the cost-of-living bonus conditions to conform to the federal government 1942 Order in Council 5963 and the decision of the Regional War Labour Board, the cost-of-living bonus payable now being calculated on the increase in the cost of living from July, 1940 to July 1, 1942.

Construction: Buildings and Structures

BUILDING TRADES, CHICOUTIMI AND LAKE ST. JOHN DISTRICT

An Order in Council, dated November 5, and published in the *Quebec Official Gazette*, November 7, amends the previous Order in Council for these trades (LABOUR GAZETTE, August, 1941, page 1009, November, page 1425, and December, page 1573). The agreement is extended to April 1, 1943, and thereafter from year to year, subject to notice. A cost-of-living bonus, adopted by the Regional War Labour Board, is fixed at 5 cents per hour to be effective without change until October 28, 1943.

BUILDING TRADES, ST. JOHN AND IBERVILLE

An Order in Council, dated November 5, and published in the *Quebec Official Gazette*, November 7, amends the previous Orders in Council for these trades (LABOUR GAZETTE, August, 1941, page 1009, November, page 1425, and December, page 1573). The agreement is extended to April 1, 1943, and thereafter from year to year, subject to notice. Following a decision of the Regional War Labour Board and in accordance with the federal government 1942 Order in Council 5963, a cost-of-living bonus of 5 cents per hour is to be paid until October 28, 1943.

BUILDING TRADES, MONTREAL

An Order in Council, dated November 20, and published in the *Quebec Official Gazette*, November 28, corrects the wording of the previous Order in Council (LABOUR GAZETTE, November, 1942, page 1348) but does not affect the summary given in the LABOUR GAZETTE.

Trade

RETAIL STORES, QUEBEC

An Order in Council, dated November 5, and published in the *Quebec Official Gazette*, November 7, amends the previous Order in Council for these retail stores (LABOUR GAZETTE, October, 1940, page 1076; January, 1939, page 96, March, page 336, July, page 729, October, page 1067; January, 1940, page 69, April, page 391, August, page 867; February, 1941, page 184, August page 1013, November, page 1425; and May, 1942, page 631). Changes and additions are made to the definitions of various types of employees. Weekly wage rates: for male apprentice tailor and dressmaker, $5 during first year to $15 during fourth year and $21 for skilled tailor or dressmaker with five years experience; for female apprentice milliner, seamstress, wages are from $5 per week during first year to $10 during fourth year and $11.50 for skilled milliner and seamstress. In place of the previous cost-of-living bonus, the bonus is now provided in the federal government 1942 Order in Council 5963, and follows a decision of the Regional War Labour Board, the bonus represents the difference in the cost of living between August, 1939 and July, 1942, and varies with changes in the cost of living. Vacation: one week's vacation with pay after one year's service.

HARDWARE AND PAINT STORES, QUEBEC

An Order in Council, dated November 20, and published in the *Quebec Official Gazette*, November 28, amends the previous Orders in Council for these stores (LABOUR GAZETTE, April, 1940, page 391, December, page 1312; January, 1941, page 70, June, page 705; June, 1942, page 739, and September, page 1097). In accordance with the federal government 1942 Order in Council 5963, and as authorized by the Regional War Labour Board, a cost-of-living bonus to be paid based on the rise in the cost-of-living index number from May, 1941, to October, 1941, with further adjustments with changes in the cost of living.

Service: Public Administration

MUNICIPAL EMPLOYEES, SHERBROOKE

An Order in Council, dated November 12, and published in the *Quebec Official Gazette*, November 21, makes obligatory the terms of an agreement between the Municipal Corporation of Sherbrooke and the Syndicat des employés municipaux de la cité de Sherbrooke (The Union of Municipal Employees of the city of Sherbrooke). The agreement is to be in effect from November 21, 1942, to May 1, 1943, and thereafter from year to year, subject to notice, and applies to permanent employees of the roads, aqueduct, parks and hygiene departments. Hours: 8 per day; overtime at time and one quarter; Sunday work at time and one half. Six holidays are to be allowed with pay, but if required to work on these holidays, time and one quarter to be paid. Hourly wage rates for some classes: labourers 40 cents, specialized labourers 45 cents, boiler firemen 45 and 50 cents, firemen and operators in asphalt shop 45 cents, asphalt roller operators 50 cents, ordinary steam roller operators 45 cents, steam roller scale worker 35 cents, blacksmiths 45 to 55 cents, garage chief mechanic 65 cents, foreman of asphalt shop and of sewers services 60 cents, aqueduct foreman 50 to 67½ cents; other classes 45 to 55 cents.

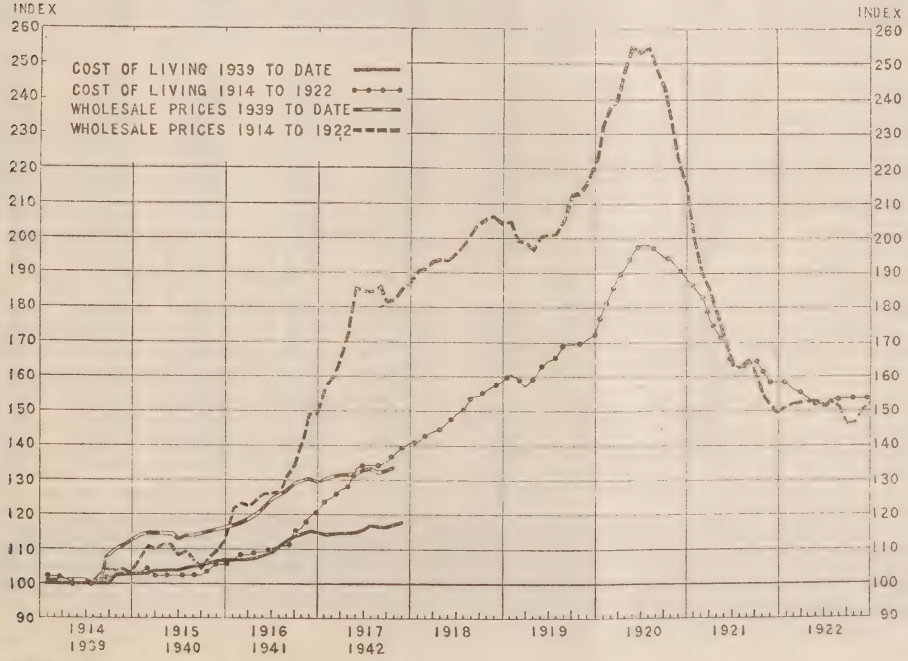
PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER 1942

Cost of Living, Prices of Staple Articles and Index Numbers

THE Dominion Bureau of Statistics official index number of the cost of living on the base period 1935 to 1939 as 100 advanced from 117·8 at the beginning of October to 118·6 at the beginning of November due to an increase of about two per cent in the food group, all other groups being unchanged. Higher prices for beef, oranges, butter, potatoes, lard, and lemons accounted for most of the advance in the index. Comparative figures at certain earlier dates are 116·3 for November, 1941; 107·8 for November, 1940; and 100·8 for August, 1939, the last pre-war month.

Since the outbreak of the war the index has advanced 17·7 per cent as compared with an increase of 37·2 per cent between July, 1914, and October, 1917, the comparable period during the last war.

After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 5963 of July 10, 1942, the index was 117·7 at November 2; 116·9 at October 1; 115·4 at November 1, 1941; 114·6 at October 1, 1941; and 106·9 at November 1, 1940. Since the introduction of price control the index has advanced 2·3 points, that is between October 1, 1941, and November 1, 1942, as compared with an advance of 23·2 points for the corresponding period during the last war after the index was similarly adjusted to the base July, 1914.



Foods advanced 33·3 per cent between August, 1939, and November, 1942; clothing 20 per cent; house furnishings and services 16·7 per cent; fuel and light 13·9 per cent; rent 7·2 per cent; and the miscellaneous group, 5·7 per cent.

In compliance with Order in Council P.C. 6219, as amended, the prices of cigarettes and tobacco used in calculating the index do not include the tax imposed on June 24, 1942, under the special War Revenue Act.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941, the Order having been amended to change the effective date from November 17 to December 1. The text of P.C. 8527 which appeared in the LABOUR GAZETTE, for November, 1941, on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. *** For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by the Wartime Wages Control Order, July 10, 1942, P.C. 5963, replacing P.C. 8253, must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at weekly wage rates of twenty-five dollars or more, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wages rate of less than twenty-five dollars per week.

a. Rolled. *b*. Blade. *c*. Lamb. *d*. Grade A. *f*. Grade B. *h*. Kind most sold.

each issue of the LABOUR GAZETTE the activities of the Board in the operation of the price control policy are summarized. Prices of certain fresh fruits and vegetables and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm-made cheese, honey, maple syrup and fish, but does apply to such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

† The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—Monthly, Prices and Price Indexes (Canada); annually, Prices and Price Indexes (Canada and Other Countries).

* Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 578.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6; January, 1942, 119·9; February, 120·3; March, 120·6; April, 120·6; May, 120·9; June, 121·8; July, 123·9; August, 123·5; September, 123·0; October, 123·7; November, 125·0.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Wholesale Prices

The Dominion Bureau of Statistics index number of wholesale prices on the base 1926 as 100 advanced from 96·8 for October, 1942, to 97·1 for November. The animal products group advanced 1·4 per cent during the month and minor increases occurred also in the vegetable products group, the wood and wood products group and in the chemicals and allied products group. Other principal groups were unchanged. Comparative figures for the general index for certain earlier dates are 94·0 for November, 1941; 84·0 for November, 1940; and 72·3 for August, 1939, pre-war. Since the outbreak of war this index has advanced 34·3 per cent as compared with an increase of 82·1 per cent between July, 1914, and October, 1917, the equal period during the last war. Consumers' goods rose 33·8 per cent between August, 1939, and November, 1942, producers' goods 34·2 per cent, and Canadian farm products 47·7 per cent. Since the introduction of price control in the autumn of 1941, the increase in the index was 3·5 per cent compared

with an increase of 31·9 per cent between October, 1916, and November ,1917, the similar period during the last war.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of November of seventy-six staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except the following, are the averages of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers; milk, bread, shoulder of veal, leg roast of pork, unsliced bacon, dairy butter, evaporated apples, vinegar and coal oil. Information as to the prices of the foregoing, with the exception of milk and bread, is obtained by the correspondents of the LABOUR GAZETTE. The prices of milk, bread, fuel and the rates for rent are obtained by the Bureau of Statistics and by the correspondents of the LABOUR GAZETTE.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

By Order in Council P.C. 8965, dated November 21, 1941 (LABOUR GAZETTE, December, 1941, page 1462), the price ceiling established by P.C. 8527 (LABOUR GAZETTE, November, 1941, page 1371) was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003 (LABOUR GAZETTE, October 1940, page 995) the Board from time to time had fixed maximum rentals for housing accommodation in certain of the cities in the list on page 1498. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat and Lethbridge. In all other cases the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941. Provision is made under the orders of the Board for variation of the maximum rentals for any accommodation under certain special circumstances affecting the accommodation.

Retail Prices

Beef prices averaged higher at the beginning of November than one month earlier. Under a new order of the Wartime Prices and Trade Board, dated October 6, maximum wholesale prices of beef were increased $1.50 per cwt. for the period October 13 to December 23. Thereafter seasonal increases at certain dates were provided for. The provisions for retail prices are similar to those under previous orders except that provision was made for a maximum markup of 7 cents per pound (LABOUR GAZETTE, November, 1942, page 1282). Sirloin steak averaged 38·1 cents per pound at the beginning of November, 36·9 cents for October 1, 34·2 for November, 1941, and 28·0 cents for August, 1939, the last pre-war month. Prices of fresh pork and of bacon were slightly higher. Fresh eggs averaged 5 cents per dozen higher at 55·4 cents per dozen. Supplies were reported to be short and stocks of storage eggs at November 1 were only about one-third of those at October 1, and about 25 per cent lower than one year ago. Creamery butter averaged one-half cent per pound higher at 40 cents at November 1. Production during October was slightly higher than for October, 1941, but the total for 10 months of 1942 was 2·5 per cent lower than for the corresponding period in 1941. Production of cheese increased about 39 per cent in this latter comparison and the price at November 1 increased fractionally during the month under review to 34·1 cents per pound. Potatoes averaged slightly higher at 39·6 cents per pound. Oranges increased in price from 41·4 cents per dozen to 46·1 cents.

The following are the prices reported for Welsh coal "cobbles" and "French nut" at the beginning of November, 1942: Halifax, $18.50; Charlottetown, $17.90; Saint John, $18.50; Quebec, $16.50; Three Rivers, $17.25; Sherbrooke, $18.75; St. Hyacinthe, $17.50; Montreal, $17.75.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices, in Great Britain and certain of the principal industrial and commercial countries appeared in the October issue of the LABOUR GAZETTE. Since these monthly notes are all compiled from British and foreign sources, the information contained therein usually deals with conditions prevailing some months previous to the date of publication in the LABOUR GAZETTE. In Great Britain, both wholesale and retail trade are now subject to government control, the main objects of which are to conserve supplies of vital materials and to protect the public from unwarranted increases in prices. In order to achieve these ends the government of the United Kingdom has fixed retail and wholesale prices of some articles and is controlling the entire trade in some commodities, including importation and exportation.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 160·0 for October, an increase of 0·6 per cent for the month. Food and tobacco, as a whole, were 0·8 per cent higher due to a rise of 4·4 per cent in cereals. Industrials materials and manufacturers were 0·4 per cent higher, the chief change being an increase of 3·2 per cent in the chemicals and oils group.

COST OF LIVING.—The index number of the *Ministry of Labour Gazette,* on the base July, 1914=100, was 200 at October 1, showing no change from the previous month. Food was one per cent higher, with higher prices for bread, flour and milk, although potatoes were lower in price. Clothing prices were about two per cent lower than the previous month's level. Rent, fuel and light and miscellaneous commodities were practically unchanged.

Newfoundland

COST OF LIVING.—The index number of the Department of Health and Welfare on the base October 1, 1938=100, was 147·8 at November 7, an increase of 2·1 per cent for the month. Food prices advanced 5·1 per cent, fuel and light 0·9 per cent, while clothing and sundries were unchanged.

Australia

WHOLESALE PRICES.—The index number of the Commonwealth Bureau of Census and Statistics, on the base 1928-1929=1,000, was 1,102 for March, as compared with 1,094 for February and 1,081 for January.

COST OF LIVING.—The official index number of the cost of food, groceries and housing, the weighted average for 30 towns, on the base 1923-1927=1,000, was 956 for the fourth quarter of 1941 and 978 for the first quarter of 1942.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 100·0 for October, an increase of 0·4 per cent for the month. Farm products advanced 1·1 per cent; foods one per cent; hides and leather products were slightly lower, while the other groups were practically unchanged.

COST OF LIVING.—The index number of the Bureau of Labour Statistics, on the base 1935-1939=100 was 119·0 at October 15, an increase of one per cent for the month. Food prices advanced 2·4 per cent, clothing 0·1 per cent, miscellaneous commodities 0·3 per cent, while the rent and fuel groups were unchanged.

National Health Services Commission Appointed in South Africa

The Union of South Africa has appointed a National Health Services Commission to study the legislative, administrative and financial measures necessary to provide the Union with an organized national health service which will ensure adequate medical, dental, nursing and hospital services for all sections of the people. The Commission has been asked to give particular attention to the provisions of the Public Health, Housing and Slums Acts, the organization of medical services for the Armed Forces, the National Nutrition Council and the report of the departmental committee on national health insurance. It will study such questions as free hospital services, health education, the training of personnel for an adequate public health program and the extension of existing research facilities. The problem of co-ordinating the activities of the central, provincial and local health authorities and of the Departments of Public Health and Social Welfare will also be considered. The nine members of the Commission include one woman, a representative of the South African Trades and Labour Council, a Senator, two members of Parliament who are also medical men, and others prominent in medical or administrative work.

The Minister of Health declared recently that the appointment of the Commission was part of the Government's preparation for post-war reconstruction and that on its recommendations would be based a "New Deal" in health services for the Union.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Dispute Involving Claim for Union Recognition Held to be under British Columbia Conciliation and Arbitration Act

ON October 27, Mr. Justice Coady in British Columbia Supreme Court dismissed an action brought by a lumber company for an injunction restraining a board of arbitration appointed under the British Columbia Industrial Conciliation and Arbitration Act, 1937, from proceeding with the arbitration and for a declaration that no dispute existed between the company and its employees. It was agreed by counsel that the question for decision was whether the dispute was a dispute within the meaning of the Act. The plaintiff company's contention that it was not, was based on the fact that it arose out of the company's failure to enter into a collective agreement with a branch of the International Woodworkers of America, and that therefore it was not a dispute between employer and employees as required by the Act but between an employer and a union. Sec. 2(1) of the Act defines a "dispute" to mean

> any dispute or difference between an employer and a majority of all his employees or a majority of all his employees in any separate plant or department of his operation as to matters or things affecting or relating to work done, or to be done by him or them, or as to the privileges, rights and duties of the employers or employees. . .

The facts of the case were agreed to be as follows. A committee of the employees in the shingle division was elected to negotiate with the Company and it submitted a draft agreement. The negotiations failed and the committee applied for the appointment of a conciliation commissioner under the provincial Industrial Conciliation and Arbitration Act. The commissioner also failed to bring about a settlement and the Minister referred the matter to arbitration.

Section 5 of the Act provides that

> It shall be lawful for employees to bargain collectively with their employer and, if a majority of the employees are, on the seventh day of December, 1938, organized into a trade-union, to conduct such bargaining through the officers of such trade-union, and if not on that date organized into a trade-union to conduct such bargaining through representatives of employees duly elected by a majority of the employees affected. . .

The workers in the shingle division were not organized in a trade union on December 7, 1938, but the Court pointed out that the negotiations were not carried on by the union but by an elected committee of employees.

The plaintiff submitted, however, that there was only one item of dispute, viz., whether or not the agreement should be made with the union, and that that was not a dispute under sec. 2(1). The Court rejected this claim, holding that the question of union recognition was only one of several items in the proposed agreement, and that the agreement itself was merely an offer on the part of the employees for the settlement of the various questions at issue. The question of whether an agreement should be entered into with the union was a matter for the board to decide along with the other questions.

Counsel for the defendants argued that even if the only question at issue was that relating to the union, it would be a dispute within the Act. Section 7 prohibits any person from compelling, by intimidation or otherwise, any other person to join or refrain from joining a trade union. Therefore, it was argued, the employees have a right or privilege to join a union and seek union recognition, and that the "privileges" and "rights" of employees are among the matters covered by sec. 2(1). The Court considered it unnecessary to express an opinion on this point since the case had already been decided on other grounds.

This judgment has been affirmed by the British Columbia Court of Appeal and leave has been granted to appeal to the Supreme Court of Canada. *Bloedel, Stewart and Welch, Limited, v. Stuart et al,* (1942) 3 Western Weekly Reports 506.

Quebec Collective Agreement Act Applies to Construction Contracted for by Canadian National Railways

It was established by a decision of December 3 of the Quebec Court of King's Bench that building contractors executing work for railways under Dominion jurisdiction are subject to the Quebec Collective Agreement Act and thus liable to pay the assessments in respect of wages which are required under that Act. The Montreal Superior Court had previously maintained the action of two general contractors for recovery of $344 which they alleged they had paid in error to the Joint Committee for the Construction Industry in the Montreal district. This sum represented assessments paid in connection with the execution of contracts between the respondents and the Canadian National Railways for construction and excavation work in and about Montreal. The respondents claimed that since they were performing work for the C.N.R. they were not covered by the Act. The Joint Com-

mittee appealed the Superior Court judgment and the Court of King's Bench allowed the appeal with costs.

The Collective Agreement Act provides that the Lieutenant-Governor in Council may order that a collective agreement between an employer or employers and a trade union governing wages, hours and apprenticeship in any trade. industry or occupation will bind the entire industry in the province or in a stated region provided that the Minister of Labour considers that the agreement has acquired "preponderant significance" in determining conditions in the industry. The parties to the agreement must form a joint committee to enforce it, and the committee has power, if approved by Order in Council, to impose an assessment on employers and workers. Section 38(c) provides that the Act does not apply to the operation of railways subject to the jurisdiction of the Parliament of Canada but this exemption does not include the construction of a railway or of the buildings connected with it. An Order in Council was passed rendering a collective agreement obligatory for the construction industry in the Montreal district, including "all engineering works, public building construction, and works of installation, rebuilding and demolition of public buildings," while another Order in Council authorized an assessment on the industry.

The Appeal Court held that the burden of establishing their exemption rested on the respondents and that they had failed to do so. The collective agreement had been made mandatory for all employers and workers in the construction industry in the district. It was the respondents in their capacity as contractors for the railway company, and not the railway company itself, who had hired the men employed on the work. The Act and the agreement therefore clearly applied since the respondents were engaged in construction and in engineering work as applied to construction. *Duranceau et al v. Comité Conjoint des Métiers de la Construction,* Quebec Court of King's Bench (Appeal Side), December 3, 1942.

Validity of Ontario Industrial Standards Act and Schedule Upheld

On September 4, Mr. Justice Mackay in the Ontario High Court of Justice dismissed an action by several manufacturers of men's and boys' clothing for declarations (1) that the Ontario Industrial Standards Act is ultra vires, and (2) that a schedule established under the Act for the plaintiffs' industry is invalid because of non-observance of statutory requirements in its adoption. A previous action for the same declarations and also for an injuction restraining the defendant from enforcing the schedule under the Act was dismissed on June 14, 1940, by Mr. Justice Roach in Ontario Supreme Court. On March 14, 1941, however, the Court of Appeal ordered a re-trial because the trial Judge had declined to admit the evidence tendered by the plaintiffs. One of the plaintiffs, the Tolton Manufacturing Co., Ltd., discontinued the action.

The Industrial Standards Act provides that the Minister of Labour may, on the petition of representatives of employers or workers in any industry in any designated zone, authorize an Industrial Standards Officer appointed under the Act to call a conference of the employers and workers in the industry to investigate conditions of labour. The conference may submit a schedule of wages and hours for the industry, and if the Minister considers the schedule is agreed to by a sufficient representation of employers and workers, he may recommend to the Lieutenant-Governor in Council that an Order in Council be passed making it binding on all employers in the industry in the given zone. The Minister may establish an advisory committee, which assists in enforcing the schedule, for any zone or group of zones to which a schedule applies, and in interprovincially competitive industries the schedule may, with the approval of the Industry and Labour Board, provide for the assessment of employers and workers so that revenue may be provided for enforcement. The schedule for the men's and boys' clothing industry provides for an assessment on employers and workers of one-half of one per cent of the payroll or wages.

In attempting to establish that the Act is constitutionally invalid, the plaintiffs argued that this assessment is an indirect tax and that the Act itself, which provides penalties for non-compliance, is an invasion of the Dominion's power over criminal law. Mr. Justice Mackay held, however, that the assessment is not a tax but a payment for services rendered in attaining the purpose of the Act, and that the Act, though it may affect the criminal law, is nevertheless "clearly regulatory in essence and objective, and not penal . . . its pith and substance . . . is to regulate particular industries entirely within the Province, and therefore it is intra vires of the Provincial Legislature."

The plaintiffs contended that the schedule itself is invalid on the ground that some of the statutory requirements for the promulgation of a valid schedule were not complied with, viz., the requirements that there must be a petition for a conference, that the Industrial Standards Officer must have authority to con-

vene a conference and that a schedule must be submitted by the conference to the Minister. The Court found, however, that the petition, the authorization to summon the conference and the schedule submitted to the Minister were in proper form, for though no form is prescribed by the statute the facts were set forth clearly. In any case, the only condition attached to the passage of an Order in Council under the Act is that there must be a recommendation from the Minister. The plaintiffs did not argue that the Lieutenant-Governor in Council lacked power to enact anything contained in the schedule but merely that he had acted on improper information conveyed to the Minister. There was no remedy in the Court for a situation in which the Lieutenant-Governor in Council had conformed to the requirements of the Act. Up to the point at which the Crown gave effect to the schedule, the plaintiffs might have applied for a writ of prohibition to prevent the conference, if improperly constituted, from continuing its work or to prevent the Minister from approving a schedule improperly brought to him, or for writ of certiorari to review the regularity of the proceedings. When, however, the Crown had done what it had a right to do, the plaintiffs could not come before the Court and complain that the conference was not properly constituted. *Tolton Manufacturing Co. Limited et al v. Advisory Committee for the Men's and Boys' Clothing Industry for the Province of Ontario,* (1942) Ontario Weekly Notes 477.

Employer Held Liable in Manitoba for Accident Resulting from Failure to Take Reasonable Precautions

The Manitoba Court of Appeal on November 9, unanimously allowed the appeal of a labourer who had been injured while employed in the sorting yard of a Winnipeg dealer in scrap iron, steel and other metals, and awarded him damages totalling $2,058. The appellant's work had consisted of shearing metal and sorting and piling junk. On the morning of the accident, he, along with other labourers, had been directed to move tractor wheels and cast-iron fly wheels to a part of the yard about 50 to 75 feet distant over a path about three feet wide. It had rained the previous night and the path was soft in places. When the men were moving a flywheel weighing about 1,000 pounds, the wheel sank sidewise in a soft spot, swung around and fell on the leg and chest of the appellant who had no room to jump clear. It was testified that all the workmen in the yard had long been dissatisfied with having to move heavy material by hand, and that they had frequently complained within the hearing of the foreman, and at least once directly to an official of the company, that a moving crane ought to be used.

Sec. 82 of the Manitoba Workmen's Compensation Act provides that a workman has a right of action against his employer if he suffers personal injury as a result of "any defect in the condition or arrangement of the ways...or premises" or of the negligence of his employer or any employee acting in the scope of his employment, and that he will not be deemed to have incurred the risk voluntarily merely by continuing in his employment with knowledge of the defect nor "to have undertaken the risks due to the negligence of his fellow workman".

It was argued on behalf of the respondent that wheels of the weight and dimensions of the one in question had been moved without mishap on innumerable previous occasions and that negligence could not be imputed since there was no reason for expecting an accident to occur. This argument was rejected on the ground that an accident cannot be excused by past fortunate experience but that the question as to whether negligence exists must be determined on the test laid down in *Blyth* v. *Birmingham Waterworks Co.* (1856) 11 Ex. 781:

> Negligence is the omission to do something which a reasonable man, guided upon those considerations which ordinarily regulate the conduct of human affairs, would do, or doing something which a prudent and reasonable man would not do.

The employer, therefore, had a duty under both the statute and the common law to take reasonable care to provide proper appliances and to maintain them in proper condition. In the present case the path in itself was not dangerous, but when it became the cause of an accident due to its narrowness and the state of the ground, it must be said that there was a defect in the condition of the ways or premises. *Gretch* v. *Shragge Metals Limited* (1942) 3 Western Weekly Reports 536.

Manitoba Court Awards Damages for Wrongful Dismissal

The fact that in a written contract of employment the amount of the salary is not specified but is left to be determined from time to time does not render the contract unenforceable, according to a decision handed down on July 30 by Mr. Justice Major in the Manitoba Court of King's Bench. Damages of $748.45 with costs were therefore awarded to the former manager of a co-operative creamery who had been out of employment for six months after having been dismissed in violation of his contract. The damages included $98.45 for arrears of salary.

The plaintiff had had a written agreement with the defendant company for one year and this had been renewed for a further four years with the salary to be agreed upon from time to time. At the end of the first year of the four-year period he was dismissed for alleged cause.

The Court found that he had been a competent manager and that the defendant company had made substantial profits while he was in charge. Allegations that his conduct towards the defendant's directors, employees, customers and shareholders had been such as to prejudice the undertaking were held to be unfounded. There was no doubt that the parties intended to and did enter into a contract, and the fact that no specific salary was stated merely implied that the salary would be just and reasonable. *Jaremy* v. *Vita Co-operative Limited* (1942) 3 Western Weekly Reports 513.

Recent International Developments in Social Security

Recent legislative enactments and proposals for new legislative measures in the field of social security mark "a deepening realization in the free nations that social security for all is one of the aims for which the war is being fought," Edward J. Phelan, Acting Director of the International Labour Office, said in a recent statement.

Proposals such as those of the Beveridge report (a summary of which appears on page 1406 of this issue) must be hailed, the statement continued, as heralding a new world-wide advance on the social security front—a front which was coming to be recognized as "an integral part of the programs of all the free nations in the struggle for a world in which President Roosevelt's Four Freedoms would be basic."

Among other evidence of the mounting interest in social security throughout the free nations, Mr. Phelan pointed to the decisions of the Inter-American Conference on Social Security held in Santiago, Chile, in September, with the co-operation of the I.L.O.; and to developments in New Zealand, Australia and the United States.

The Santiago Conference (LABOUR GAZETTE, November, 1942, page 1285) resulted in agreement among 18 Latin American countries, the United States and Canada, on a comprehensive program to further social security in the Americas, and on plans for permanent co-operation in carrying out this program.

Delegates to the conference agreed that it was necessary to take steps to bring the whole gainfully-occupied population in each country —workers in industry, commerce and agriculture, and the self-employed—together with their families, within the scope of contributory social insurance, and to provide them with a fully-equipped health service. The conference also recommended that representatives of employers and workers collaborate in the administration of social security.

Other examples of the widening interest in social security included the recent action of the New Zealand Government in instituting medical service, family allowances and a full set of cash benefits (a review of which will appear in a forthcoming issue of the LABOUR GAZETTE), the setting up by the Australian Government of a Commonwealth Committee to draft proposals on similar lines, and the introduction of family allowances and widows' pensions in the Commonwealth; and the introduction of a bill in the United States Congress to add disability benefits and hospitalization benefits to the existing social security scheme.

"The Santiago Conference agreed that the health and welfare of any one American nation was the concern of all," Mr. Phelan's statement concluded. "I am confident that the realization is rapidly growing that the social security of any nation in the world is the concern of all nations."

By an order of October 3, 1942, the President of the United States suspended the eight-hour law as it affects workmen employed on construction projects for the Civil Aeronautics Authority. This action he declared to be necessary for the successful prosecution of the war.

Under the 8-hour law, mechanics and labourers on public works could not be employed for more than 8 hours in any one day, except in case of extraordinary emergency. Where such men work more than 8 hours, as permitted by the new order, they must be paid time and a half for overtime

PRICES IN CANADA AND OTHER COUNTRIES, 1941

THE upward movement in prices following the outbreak of war in 1939 was continued during 1941 and in some countries, chiefly in the Western Hemisphere, was at a more rapid rate than previously. Factors in this upward movement were: the scarcity of many commodities resulting from the demands for war purposes in competition with civilian demands which in some countries were increased owing to higher employment and greater purchasing power due to Government expenditure; the limiting of production of civilian goods and the conversion of industry to meet war requirements; the lack of shipping space and the increased cost of transport; and the spread of the war to the Pacific toward the end of the year with further interruption of trade. By December, 1941, wholesale prices in Canada had advanced 11·2 per cent since December, 1940, and 29·5 per cent since August, 1939, the last prewar month. In the same comparison the figures for the United States are 17 per cent and 24·8 per cent, respectively; for the United Kingdom 5·2 per cent and 58·9 per cent; for India 25·8 per cent and 51 per cent; and for the Union of South Africa 12·5 per cent and 32 per cent. Similarly the cost of living in Canada advanced 7·2 per cent during 1941, and 14·9 per cent since the outbreak of war. For the United States the figures were 9·7 per cent and 12·1 per cent; and for the United Kingdom 3·1 per cent during 1941, and 29·7 per cent since August, 1939.

Movement of Retail Prices and Cost of Living in Canada During 1941

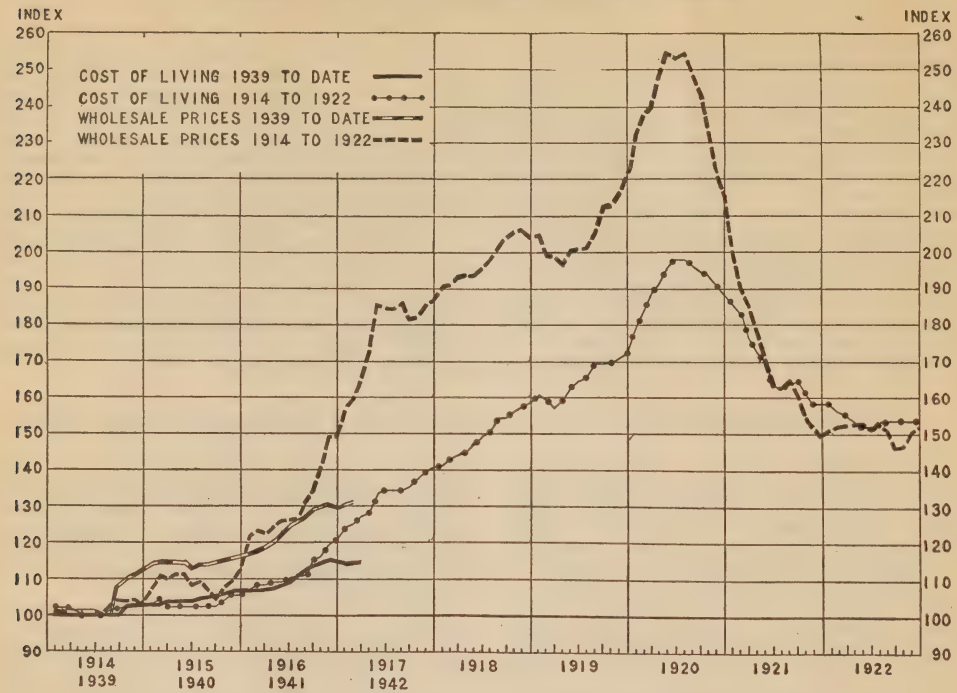
The Dominion Bureau of Statistics index number of the cost of living in Canada on the base of average prices during the period 1935 to 1939 as 100 advanced from 108·0 for December, 1940, to 115·8 for December, 1941, showing an increase for the year of 7·2 per cent. The movement during the year was upward until November, when the index was 116·3, except for a minor decline in February. The decline of one-half point in December marked the only appreciable fall in the index since the outbreak of the war. The new regulations as to control of prices outlined below came into effect on December 1. The principal factor in the movement of the index since August, 1939, has been the change in the food group which accounted for nearly half of the increase since that time and the decline at the end of 1941 was due almost entirely to lower prices for certain foods. All other groups, however, recorded advance during the year, the largest being in the home furnishings 6·5 per cent and in clothing 5·6 per cent. At the end of the year the general index was still about 7 per cent lower than the pre-depression peak of January, 1930.

After adjustment to the base 100·0 for August, 1939, as required by Order in Council P.C. 8253 of October 24, 1941, the index was 107·1 at December 1, 1940, and 114·9 at December 1, 1941, thus showing an advance for the year of 7·8 points and a wartime increase of 14·9 points.

The food group was 13·5 per cent higher at the end of 1941 than at the end of 1940 and 24·7 per cent higher than in August, 1939, the index being 123·8 for December, 1941, 109·1 for December, 1940, and 99·3 for August, 1939. Nearly all of the advance in the group during the year occurred between May and November when the high point of 125·4 was recorded. A decline of about 1·5 per cent was recorded in December. All of the 46 items in the food group advanced during the year with the exception of dry beans and cocoa which were slightly lower. The advance in the group was due mainly to higher prices for meats, dairy products, certain fruits and vegetables, tea and coffee.

The index for the clothing group advanced 5·6 per cent during the year from 113·5 for December, 1940, to 119·9 for December, 1941. Increases were slight month by month until August, most of the advance being recorded during September and October. A slight decline occurred in December. At the end of the year the index was 19·8 per cent higher than in August, 1939.

The home furnishings and services group advanced 6·5 per cent during the year and 16·8 per cent since August, 1939, the figures being 117·9 for December, 1941, 110·7 for December, 1940 and 100·9 for August, 1939. Most of the increase during the year occurred between June and October.



The fuel and lighting group advanced 3·9 per cent during the year, the index being 108·5 for December, 1940, and 112·7 for December, 1941. The increase was due mainly to higher prices for coal and coke though increases in the charges for fuel gas were reported from several cities. The advance in the group since the outbreak of war was 13·8 per cent.

The index of rentals for workingmen's dwellings advanced 3·2 per cent during the year and 7·1 per cent since the outbreak of war. Control of rentals effective throughout the year in a number of areas affected by war conditions was extended at various times to additional areas and toward the end of the year was extended to rentals charged for all real property.

In Canada the control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941. This order, the text of which appeared in the Labour Gazette for November on page 1371 provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, except under the regulations of the Wartime Prices and Trade Board. In the Labour Gazette for December, 1941, on pages 1498 to 1501 under the title "Stabilization of Prices in Canada" there appears an outline of the measures taken by the Board. Prices of fresh fruits and vegetables, furs and certain kinds of fresh, cured and canned fish were exempted by the Board from the provisions of the maximum prices regulations. The order does not apply to sales by

COST OF LIVING AND WHOLSALES PRICES IN CANADA 1914-1922 AND 1939-1942

BASE: PRICES IN JULY 1914 AND IN AUGUST 1939=100

farmers and fishermen to dealers or processors of live stock, poultry, eggs, milk, cream, dairy butter, farm made cheese, honey, maple syrup and fish does but apply to sales by such dealers and processors and to sales by farmers and fishermen to consumers.

The index number of the cost of living, was constructed on the basis of a survey of expenditure of 1,439 families of wage-earners and salaried workers with earnings between $450 and $2,500 in 1938. The average expenditure was $1,453.90 divided as follows: food (31·3 per cent), $443; shelter (19·1 per cent), $269.50; fuel and light (6·4 per cent), $90.50; clothing (11·7 per cent), $165.80; home furnishings (8·9 per cent), $125.70; miscellaneous (22·6 per cent), $319.40.

The last named group includes health (4·3 per cent), $60.80; personal care (1·7 per cent), $23.90; transportation (5·6 per cent), $79.30; recreation (5·8 per cent), $82.10; life insurance (5·2 per cent), $73.30. Other expenditure not directly represented in the index was $40.

The Dominion Bureau of Statistics has issued an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. The figures at certain dates since August, 1939, are: August, 1939, 100·0; September, 100·0; October, 103·8; November, 104·3; December, 104·3; January, 1940, 104·2; February, 104·3; March, 105·5; April, 105·5; May, 105·3; June, 105·3; July, 106·4; August, 106·8; September, 107·9; October, 108·4; November, 109·7; December, 110·0; January, 1941, 110·4; February, 110·1; March, 110·2; April, 110·7; May, 110·9; June, 112·7; July, 114·9; August, 117·7; September, 119·4; October, 120·1; November, 121·4; December, 120·6.

Table I gives the official index number for Canada on the base of average prices for the period 1935 to 1939 as 100 and also after adjustment to the base of August 1939 as 100 as required by P.C. 8253. Table IA gives the general index on the base 1935 to 1939 as 100 by months since January 1914. In Table II are shown index numbers of the cost of living for eight cities on the base August 1939 as 100 and in Table III are shown index numbers of retail prices of foods in eight cities on the base of average prices in 1935 to 1939 as 100.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with prices in the period 1914-1922.

Retail Commodity Prices, 1941

Meat prices advanced considerably during the year to a peak in October followed by a slight decline with the establishment of the prices ceiling. In the summer consumers were requested to reduce their consumption of certain pork products in order that bacon and ham might be available for export to the United Kingdom. This resulted in increased demand for other meats. Marketings of cattle and hogs were considerably greater in 1941 than in 1940 and an increase was also recorded in the number of cattle exported to the United States. The retail price of sirloin steak advanced from 29·9 cents per pound for December, 1940, to 33·8 cents for

December, 1941. Other increases in the same comparison were lamb from 27·2 cents to 31·1 cents, fresh loin of pork from 24·5 cents to 32·7 cents, and bacon from 32·2 cents to 43·1 cents.

Egg prices advanced during the summer and autumn of 1941 to levels considerably higher than for the corresponding period in 1940 but by the end of the year the difference was slight the price being 47·4 cents per dozen for December, 1941 and 46·2 cents for December, 1940. The price of milk advanced from an average of 11·1 cents per quart at the beginning of the year to 11·8 cents in December, increases of one cent per quart having been reported from many localities.

The retail price of creamery butter averaged 38·5 cents per pound at the beginning of December, 1941, as compared with 34·9 at December 1, 1940. Toward the end of 1940 the Wartime Prices and Trade Board issued an order fixing the maximum wholesale prices at the prices prevailing in various localities on December 12, 1940. This order was revoked on May 1, 1941. Under an order in council of May 10, 1941, minimum prices for butter were established for the months of May to October. The Dominion average price, as of the beginning of each month, was at the low level for the year in May and June, 34·9 cents per pound and the high 41·3 cents at the beginning of September. Toward the end of 1941 the production of dairy products was influenced by the high prices for cheese which resulted in the diversion of milk to the manufacture of cheese otherwise used for butter and concentrated milk products. The price which was relatively stable for the first six months of the year rose from 24·8 cents per pound for June to 36·7 cents for November and December.

The price of potatoes was lower month by month during the first 8 months of 1941 than in 1940. The 1941 crop was about 7 per cent less than that of 1940 and the seasonal decline following the marketing of the crop was smaller than usual. The average price at the beginning of December was 29·4 cents per 15 pounds as compared with 33·2 cents for August the high point and 25·6 cents for December, 1940.

The price of granulated sugar advanced from 7·5 cents per pound for the early months in the year to 8·6 cents for June and thereafter. On March 31 at the request of the Minister of Finance the Wartime Prices and Trade Board ordered an increase of 1 cent per pound at the refineries the increase to accrue to the Dominion Government. When the excise tax on sugar was increased one cent per pound, this order was withdrawn leaving the net increase 1 cent per pound.

The price of United States anthracite coal advanced from $15·76 per ton for December, 1940, to $16·52 for December, 1941. Most of the increase occurred after July when the price was $15·95 per ton.

Rent for workingmen's houses advanced in a number of the cities not already under rental control and prior to the establishment of the general ceiling on rentals effective December 1, 1941. By Order in Council P.C. 8965, dated November 21, 1941 the price ceiling was extended to rentals charged for all real property, the order to be administered by the Wartime Prices and Trade Board. Under authority conferred by Order in Council P.C. 5003, September, 1940, the Board from time to time fixed maximum rentals for housing accommodation in certain of the cities for which rental figures are published each month in the Labour Gazette. In these cities the maximum rentals already fixed continue unchanged, based in some cases on those in effect on January 2, 1940, and in the others on those in effect on January 2, 1941. The former are Halifax, New Glasgow, Sydney, Thetford Mines, Kingston, Ottawa, Windsor, Brandon, Calgary, Nanaimo, New Westminster, Prince Rupert, Vancouver, and Victoria; the latter are Truro, Moncton, Brockville, Belleville, Fort William, Hamilton, Niagara Falls, Oshawa, Peterborough, Port Arthur, St. Catharines, Sault Ste. Marie, Regina, Edmonton, Medicine Hat, and Lethbridge. In all the other cities in the list effective December 1, 1941, the maximum rental for any housing accommodation is the rental which was in effect on October 11, 1941.

Wholesale Prices in Canada, 1941

The accompanying Table IV gives the wholesale prices of certain important commodities, while Tables V, VI, and VII show the index number of wholesale prices in Canada calculated by the Dominion Bureau of Statistics. The commodities being arranged according to "chief component materials" in Table V, "purpose" in Table VI and "origin" in Table VII.

This index advanced from 84·2 for December, 1940, to 93·6 for December, 1941. The increase 11·2 per cent was more rapid than in the preceding year when the index rose 3·1 per cent. The advance continued month by month until November, becoming pronounced during the summer. A slight decline was recorded in December following the establishment of the ceiling on prices effective December 1. The index for December, 1941, was 29·5 per cent higher than in August, 1939, the last prewar month, as compared with an increase of 48·8 per cent between July, 1914, and November, 1916, the similar period of the last war.

In the classification according to chief component materials all of the main groups advanced ranging from less than one per cent for the non-ferrous metals group to 18·4 per cent for the animal products group. In the latter group important advances were recorded by the indexes for prices of livestock, meats and poultry, hides and skins, furs, fishery products, cheese and fats. The vegetable products group advanced 13·8 per cent. Substantial increases were recorded in vegetable oils, also in the subgroup index of prices of tea, coffee, cocoa and spices, as well as for table vegetables, and moderate increases in grains, milled products and bakery products. Of the remaining groups chemical products rose 14·3 per cent, fibres and textile products 12·4 per cent, non-metallic mineral products 9·4 per cent, wood products and paper 7·8 per cent, and iron and its products 6·1 per cent. The advance in the textile products group was due in large part to increases in raw cotton, cotton fabrics and in raw silk.

Raw and partly manufactured goods advanced 12·2 per cent during 1941, and 36 per cent since August, 1939, while fully and chiefly manufactured goods rose 11·1 per cent during 1941, and 27·3 per cent since August, 1939. Canadian farm products advanced 11·1 per cent and 27·9 per cent in the same comparison.

TABLE I.—DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF THE COST OF LIVING IN CANADA*

PRICES AS AT THE BEGINNING OF EACH MONTH

—	Adjusted to base 100·0 for August, 1939	On base of average prices in 1935–1939 as 100

*** For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.**

The cost of living bonus provided for by P.C. 8253 must be based on the index shown in the left-hand column. For each rise of one point in the index the amount of the bonus or its increase shall be:—(1) twenty-five cents per week for all adult male employees, and for all other employees employed at basic wage rates of twenty-five dollars or more per week, and (2) one per cent of their basic weekly wage rates for male employees under twenty-one years of age and female workers employed at basic wage rates of less than twenty-five dollars per week.

TABLE IA.—DOMINION BUREAU OF STATISTICS INDEX NUMBERS OF COST OF LIVING IN CANADA BY MONTHS 1914–1941*

Average prices 1935–1939=100

* Figures for 1940 and 1941 subject to revision.

Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXII give such index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries as are available for 1941 and for preceding dates, to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority constructing the index number. The semi-annual supplement to Prices and Price Indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for many countries.

As a result of war conditions the information for certain countries is not as complete in the present report as heretofore, there being no data for some countries since September, 1939.

Great Britain and Northern Ireland

Cost of Living.—The Ministry of Labour's index number (Table XA) is based on the standard of living of a workingman's family prior to the outbreak of war in 1914. The cost of living, on this basis, at the 1st of January, 1942, had risen about 29 per cent over the September 1, 1939, level. Of the rise of 29 per cent in the cost of living, 1·8 per cent was due to taxes on sugar, tobacco, cigarettes and matches, and a further 3·9 per cent was stated to have resulted from the Purchase Tax. (This tax which became effective October 21, 1940, is levied when the goods pass from the wholesaler to the retailer and is at the rate of one-third of the wholesale value of certain classes of goods and one-sixth of the wholesale value of certain other classes of goods. The only items used in compiling the cost of living index number which are subject to the purchase tax are clothing, clothing material, domestic ironmongery and pottery, and the tax is not chargeable on garments or shoes for young children's wear.) Food prices had risen 18 per cent since September 1, 1939. As the war progressed, maximum prices of an increasing number of foods were set by the Minister of Food. Clothing prices rose steadily from the beginning of the war and had increased by about 93 per cent in this period. The fuel and light group was 26 per cent higher and the sundries group about 30 per cent higher at January 1, 1942, than at September 1, 1939, while rent had only increased by one per cent.

Wholesale Prices.—The Board of Trade index number of wholesale prices recorded a rise of 4·9 per cent from December, 1940, to December, 1941, although compared with August, 1939, they had risen 58·9 per cent.

"The forces making for a steep rise in prices had largely worked themselves out before the end of 1940, and the continuation and extension of price control and subsidies had a stabilizing effect in 1941. Consequently the increase for the year, as measured by the Board of Trade index of wholesale prices, amounted to rather less than 5 per cent, as compared with the considerable increases of 21½ and 24½ per cent, respectively, in 1940 and in the first four months of the war. Food prices increased in 1941 by 4·2 per cent, and those of industrial materials and manufactures by 5·3 per cent; there was little change in food prices in the first five months of the year, but, apart from a small decrease in August, there was subsequently a rising tendency; the greater part of the price increase for industrial materials and manufactures occurred in the first six months of the year, the largest increases (about 1 per cent) being in January and June." (*The Board of Trade Journal*, January 17, 1942.)

United States

Cost of Living.—The Bureau of Labour Statistics index number of the cost of goods purchased by wage-earners and lower salaried workers in large cities shows an advance of 9·7 per cent between December, 1940, and December, 1941, which began in February and continued steadily each month. During the year, the food and house furnishings groups each showed increases of about 16 per cent, clothing of about 13 per cent, the miscellaneous group about 6 per cent, while the changes in rent and in the fuel, electricity and ice group were each about 3 per cent.

Wholesale Prices.—The Bureau of Labor Statistics index numbers of wholesale prices are shown in Table XXII.

"Commodity prices in wholesale markets rose sharply during the second year of World War II. Except for a slight reaction in February, the Bureau of Labor Statistics comprehensive index of nearly 900 price series advanced steadily to a 12-year peak at the end of the year. From an average of 78·6 per cent of the 1926 level for 1940, the all-commodity index rose more than 11 per cent to 87·3 for 1941. Notwithstanding governmental action to control unwarranted increases, commodity prices in wholesale markets have exceeded the 1937 peak and are at about the level reached late in 1929. . . . . ."

"Farm product prices recorded the greatest gain, nearly 22 per cent, from 1940 to 1941. Live stock and poultry advanced more than 32 per cent; grains, 13 per cent; and cotton, 38 per cent. Food prices increased 16 per cent, largely because of sharp advances in prices for meats, dairy products, and certain imports such as coffee, cocoa, tea, and pepper. Textile product prices rose nearly 15 per cent, mainly because of marked increases in prices for cotton goods, burlap, and for certain imported fibres such as hemp, sisal, and jute. . . . . ."

"From the 5-year low point of August, 1939, immediately preceding the outbreak of the war to December, 1941, prices for nearly all types of commodities have risen substantially. Among the outstanding increases were 55 per cent for farm products; 35 per cent for foods and textile

products; more than 20 per cent for hides and leather products, building materials, and chemicals and allied products; more than 15 per cent for housefurnishing goods and miscellaneous commodites; 10 per cent for metals and metal products; and 8 per cent for fuel and lighting materials. Since August, 1939, prices for industrial fats and oils have risen 151 per cent; for cattle feed, 82 per cent; grains, 77 per cent; cotton goods, 60 per cent; drugs and pharmaceuticals, 64 per cent; live stock and poultry, dairy products, lumber, "other farm products," "other foods," and "other textile products," from 40 to 55 per cent; and for cereal products, fruits and vegetables, meats, leather, clothing, woollen and worsted goods, motor vehicles, paper and pulp, and crude rubber, 20 to 35 per cent."—(*Monthly Labor Review*, United States Department of Labor, February, 1942.)

Introductory Note

The present is the twenty-fifth report in the series on wages and hours of labour in Canada. The first report in this series was issued as a supplement to the LABOUR GAZETTE for March, 1921, and contained figures as to wages and hours of labour for certain trades in various cities in Canada from 1901 to 1920, with index numbers by groups based on wages in 1913 as 100. It also contained samples of wage rates for common labour in factories, miscellaneous factory trades in a small number of industries, and wages in lumbering from 1911 to 1920, with index numbers. Subsequent reports were also supplements to the LABOUR GAZETTE early each year, except No. 4 on Wages and Hours of Labour in Canada, 1921 and 1922, and No. 5 on Hours of Labour in Canada and Other Countries, issued separately. These reports brought the figures down to date with extensions from time to time to include additional industries and classes of labour. In most cases these additions contained data back to 1920. Wages and hours on steamships on the Atlantic and Pacific coasts and on the Great Lakes and St. Lawrence river were first covered in Report No. 21, with data for 1929, 1936 and 1937.

Certain of these reports, however, contained special features. Report No. 3 (February, 1922) included an appendix with statistics of wages and hours in coal mining in Canada from 1900 to 1921 with index numbers for the three principal districts. Report No. 5 (1923) dealt with Hours of Labour in Canada and Other Countries. Report No. 7 (January, 1925) included an appendix with figures for agriculture from 1914 to 1923. Report No. 11 (January, 1928) contained an appendix on wages of employees of steam railways, considerably increasing the information for the years since 1917 with a more extensive record from 1901 to 1927 and also a new series of index numbers. Each report from No. 7 (January, 1925), to No. 14 (January, 1931), contained data not only for the previous year but back to 1920, except that figures for 1922, 1923 and 1924, the years of least change, were omitted from some of the tables owing to lack of space. Report No. 15, issued in January, 1932, contained data for the years 1926, 1930 and 1931, with figures for 1920 also in some cases. Report No. 16, issued in January, 1933, afforded figures for 1930, 1931 and 1932 with figures for 1920 and 1926 also in some tables. Subsequent reports in each case have included figures for the calendar year just ended, for the preceding year, for 1929, and for other years in some cases.

In Report No. 15 (January, 1932) the number of cities for which data were given in Table I as to building trades and electric railways was increased to approximately forty, and in the case of printing trades to fifteen, and these cities have since been covered in subsequent reports, street railways, however, being reduced owing to change over to bus operation. Previously this table covered only thirteen cities, except that data for building trades in Windsor, Ont., were included, beginning with the report for 1928. Sheet metal workers employed in building and construction have been included with building trades since 1927, while sheet metal workers in factories have been included in the table on manufacturing industries. The section of the table on metal trades previously given was omitted from Reports Nos. 15 and 16 for 1931 and 1932 but figures for these trades appeared in the tables of sample rates of wages and hours in the sections of Table X on foundries and machine shops and other metal manufacturing industries. This section of Table No. 1 was, however, included in Report No. 17 with figures for 1920, 1926 and 1930 to 1933 and has been continued in subsequent reports. As in previous reports figures on wages for the metal trades, in mines and on railways appear in the tables in those industries.

Report No. 24 included an additional table of index numbers on the basis of wages in 1935-1939=100. This was constructed from the groups in the table previously published with the inclusion of four new groups, namely, metal mining, steamships, laundries and telephones. Report No. 25 includes only the new table but the index numbers by groups on the 1913 basis are given in a footnote to the table.

The appendix on wages and hours under provincial minimum wage legislation, included first in Report No. 12, issued in January, 1929, was enlarged in Report No. 18 (January, 1936), and in subsequent reports to include also data as to wage rates in certain collective labour agreements enforceable under legislation in several of the provinces. In the present report only changes in such legislation during 1941 are included. Report No. 20 (January, 1937) contained a section on hours of labour under provincial legislation; this was omitted in Reports Nos. 21 and 22 but subsequent reports contained a similar appendix with the information revised to date. Report No. 20 also included an appendix on average weekly earnings in merchandising and service establishments, containing a summary table compiled from a report issued by the Dominion Bureau of Statistics for 1935. Reports Nos. 21 and 22 contained similar data for 1936 and 1937. For subsequent years the data have not been collected.

WAGES AND HOURS OF LABOUR IN CANADA

1929, 1940 and 1941

GENERAL SUMMARY

The present report contains data for the years 1929, 1940 and 1941, but the tables on building trades, printing trades, metal trades and electric street railways show figures for 1920, 1926, and 1929 to 1941, while the table on steam railways is for the years 1920 to 1941, inclusive.

In the appendices information is given as to minimum wage rates and maximum hours of work under provincial legislation, wages and hours of labour under collective agreements, and schedules of wages and hours made obligatory by Orders in Council in certain provinces. Information is also given as to the federal government fair wage policy.

Tables are included also in the appendices showing wages in agriculture in 1942 and certain previous years, average earnings of steam railway employees in recent years with numbers employed in 1940, average earnings of coal miners with numbers employed and days worked from 1921 to 1940.

The table of index numbers of rates of wages contains figures showing changes in wages for some of the principal occupational and industrial groups from 1901 to 1941, and for certain other groups from 1911, 1913 and 1920 to 1941. Index numbers for other groups have not been calculated as figures for early years have not been compiled and published. The table of index numbers previously published with 1913 as the base year is omitted from this report. The index numbers for 1941, however, are shown in a footnote to the table.

Changes in Wages

During the year 1941 there were considerable increases in wages in all industries, averaging ten per cent over 1940 when the average increase over 1939 figures was three per cent; the total increase since 1939 was, therefore, approximately 13 per cent. As some of the figures were for June and others for September they do not represent the wage level at the end of 1941. The adjustment of the cost-of-living bonuses in the closing months of the year together with such increases in rates as were made before the "wage ceiling" was provided for in November would make the level by December (including the cost-of-living bonus) somewhat higher, probably 15 per cent above 1939 rates, approximately equal to the increase in the cost-of-living since August, 1939, which was 14·9 per cent.

The figures as to wages in this report for 1941 include the cost-of-living bonus reported in each case, usually down to October while for coal mining and steam railways the adjustments after November 15 were included. For some industries the amount of the bonus is not added to the basic rates but is shown in footnotes, namely, where the bonus was paid only in a few cases and again where it was paid throughout the industry. In most cases, however, the bonus reported has been included in the figures tabulated. Many of these were given in accordance with an Order in Council passed on December 17, 1940, (P.C. 7440) for the guidance of Boards of Conciliation and Investigation dealing with wage disputes under the Industrial Disputes Investigation Act, in mines, some public utilities and war industries. This policy was also recommended for the

adjustment of wages generally. (LABOUR GAZETTE, January, 1941, pp. 22-24 and Supplement July, 1941.)

Under P.C. 7440, as amended in June, 1941, the cost-of-living bonus was 25 cents per week for each rise of one point in the cost-of-living index (adjusted to the base of 100 for August, 1939) during the period since August, 1939, or since the last increase in basic rates of wages after August, 1939, for adult male employees and female employees paid 50 cents per hour or more; for male workers under 21 years of age and for female employees paid less than 50 cents per hour the bonus was one per cent of basic wage rates; the bonus to be adjusted not more often than once in three months and when the index had risen at least five points.

A subsequent Order in Council passed on October 24, 1941, P.C. 8253 provided for the appointment of a National War Labour Board consisting of representatives of employers and workers with a chairman appointed by the Governor in Council, also Regional War Labour Boards for the various provinces, for the stabilization of wages and for the payment of cost-of-living bonuses adjustable quarterly according to the changes in the index number as follows:

Except on written permission of the National War Labour Board, no employer may increase his basic wage rates. This permission can only be given in cases where the Board has found the wages to be low. Wage rates which are high will not have to be decreased, but in such cases the Board may order the employer to defer the cost-of-living bonus.

Every employer now paying a P.C. 7440 bonus must increase it on or about November 15 by an amount based on the rise in the cost-of-living from the date of the index number last used to determine the amount of the bonus up to October, 1941. If last August he paid a bonus or increased the amount of an existing bonus on the basis of the index number for June, 1941, he would use the rise in the index number between June and October. If he based his bonus award or change in August on the index number for July he would use the rise between July and October.

Employers who have not been paying a P.C. 7440 bonus must begin to pay a bonus on or about February 15, 1942, on the basis of the rise in the cost-of-living between October, 1941, and January, 1942, or on the basis of the rise in the cost-of-living for such other period as the Board finds fair and reasonable.

The amount of all bonuses will be increased or decreased regularly as of February 15, May 15, August 15, and November 15 in accordance with announcements to be made by the Board.

For each rise of one percentage point in the cost-of-living, the bonus will be:—

(*a*) 25 cents per week for all adult male employees and for other employees employed at basic wage rates of $25 or more per week, and

(*b*) One per cent of their basic weekly wage rates for male employees under 21 years of age and female workers employed at basic wage rates of less than $25 per week.

The employer is not required to pay a bonus to employees above the rank of foreman.

If there is any dispute about whether a bonus should be paid or about the amount of any bonus, it shall be decided by the Board whose decisions shall be final and binding on the employers and employees concerned.

Employers who can show to the National Board that they are financially unable to pay the bonus may be authorized not to pay it or to pay it only in part.

The bonus payable after November 15, 1941, to those receiving the full bonus under P.C. 7440 not having had an increase in wages since August, 1939, was $3.65 per week on the basis of the adjusted index for October 1, 1941, which was 114·6, a rise of 14·6 points.

The general wage index number for all of the industries covered by the calculation in 1941 was 119·2 as compared with 108·4 in 1940 and 105·3 in 1939, 89·6 in 1933 and 104·5 in 1929.

There has been considerable variation in the recovery in wages since 1933 following the industrial depression after 1929. Building trades, which have risen by the smallest percentage since 1933, had fallen the most since 1929 when the index was comparatively high.

The average increases by occupational or industrial groups were as follows: steam railways, coal mining, and common factory labour

INDEX NUMBERS OF RATES OF WAGES FOR VARIOUS CLASSES OF LABOUR IN CANADA 1901-1941
(Rates in 1935-39=100),

NOTE.—For 1941, rates include cost of living bonus where reported.

* Weighted according to average number of workers in each group in 1921 and 1931 except metal mining where years 1921, 1931 and 1938 were used.

† Including some increases effected near the end of the year.

‡ Including a 10 per cent decrease for certain classes toward the end of the year.

(a) Seven trades from 1901 to 1920, eight from 1921 to 1926, nine from 1927 to 1941; 13 cities to 1927, 14 cities to 1930, thereafter 31 to 42 cities.

(b) Five trades from 1901 to 1926, four from 1927 to 1941.

(c) Two trades from 1901 to 1920, four for 1921 and 1922, two for 1923 and 1924, six from 1925 to 1941.

(d) Two classes from 1901 to 1923, five classes 1924 to 1941; from 1901 to 1930, 13 cities; thereafter 35 decreasing to 25.

(e) Twenty-three classes.

(f) Four classes 1901 to 1920, twelve classes 1921 to 1941.

(g) The number of samples (and industries) increased from time to time since 1920; machine operators, helpers, etc., also included.

(h) Revised, see page 15.

§ On the former base (1913=100) the index numbers for 1941 are as follows: building trades 184·6, metal trades 215·8, printing trades 203·9, electric railways 215·8, steam railways 229·0, coal mining 197·2, common factory labour 232·8, miscellaneous factory trades 244·9, logging and sawmilling 221·2, and the general average weighted 225·0.

—12 per cent; miscellaneous factory trades—11 per cent; logging and sawmilling, steamships, and telephones—10 per cent; metal mining—9½ per cent (in metal mining, many miners also receive bonuses based on the price of metals, production, etc.); metal trades—9 per cent; electric railways—7½ per cent; laundries—7 per cent; building trades—5½ per cent; and printing trades—5 per cent.

In manufacturing, all industries included reveal wage increases in 1941. The furniture and radio industries had the greatest average increase in wage rates, over 19 per cent. Steel shipbuilding firms and firms engaged in the manufacture of carriages, wagons, truck bodies, etc., ranked next with a 16 per cent increase. Leather (tanning) showed an average rise in wages of 15½ per cent. There was a 13½ per cent increase reported in silk yarn and fabrics and rubber products industries, and 13 per cent in the manufacture of agricultural implements. Wages in the meat packing industry were higher by 12½ per cent, and an increase of about 12 per cent was reported by firms engaged in the manufacture of electrical apparatus, machinery, engines, boilers, etc., sheet metal products and flour. Firms making sash, doors, etc., also firms manufacturing ready-made clothing had a 11½ per cent rise in wage levels. There was an increase of 11 per cent in the case of woollen mills and factories producing stoves, furnaces, etc. Candy factories, cotton mills, and shirt factories reported a 10½ per cent advance and rates went up by 10 per cent in foundries and machine shops. The following had a 9½ per cent rise in wages: crude, rolled and forged products and automobile parts industries, biscuit factories and knitting mills. Firms making electric batteries, paper boxes, and brewery products reported an increase of 9 per cent approximately. Wages advanced by 8 per cent in bread and cake factories, and by 7½ per cent in the making of fur goods and tobacco and cigarettes. There was an increase of nearly 7 per cent in automobile factories. Cigar factories and firms making harness, leather belting, etc., had a rise of about 6½ per cent in wage rates. The pulp and paper industry showed increases averaging 5 per cent, mostly due to a cost-of-living bonus.

In the industries for which index numbers have not been calculated there were wage increases in several cities for civic employees but rates remained unchanged in most cities. In the case of motor truck drivers engaged in local transportation increases in wages were general in all localities and were substantial in many cases. In regard to stevedoring, longshoremen's rates of pay for handling general cargo at ocean ports were unchanged but those at Great Lakes ports generally were raised by a cost-of-living bonus of 5½ cents per hour from October 1. Rates for grain elevator employees were increased by 9½ per cent and those for workers in electric power and transmission plants by 8½ per cent.

For previous years it will be seen from the table of index numbers that by 1920 wages had reached levels about 100 per cent higher than in 1913, in some groups the increase being over one hundred per cent while for building and printing trades the increases were appreciably less, being only about 80 per cent. After 1920 nearly all groups showed some decreases, although printing trades and coal mining reached the peak in 1921 instead of 1920, declining somewhat thereafter. The decreases in coal mining in 1925 were comparatively steep. From 1925 to 1930 the movement was upward in each group. In 1930 the index numbers for most of the groups were slightly higher but that for lumbering declined slightly. In 1931 all groups were downward except coal mining and telephones. In 1932 and 1933 all groups were down, the greatest decreases being in lumbering and building trades. In 1934 lumbering, and telephones showed substantial increases, skilled and unskilled factory labour and metal mining also advanced appreciably and coal mining slightly while the other groups were lower. In 1935 all groups, except telephones, were higher especially lumbering and steam railways, and the upward movement has continued since, though in 1939 the increases were slight in all groups except lumbering where decreases occurred.

In 1940 the upward movement of wage rates was greatly accelerated, reflecting the improvement in employment and the rise in the cost of living. There were increases in all groups except steam railways. In 1941 the upward trend continued with still more and larger increases in all industries.

Building Trades

In the building trades up to 1919 there were smaller increases than in most of the other groups, but in 1920 there were considerable increases. In 1921 decreases of 10 cents per hour were general and in 1922 decreases

of 5 cents per hour were numerous. In 1923, 1924 and 1925, while there were upward movements in the average, it was due to increases in particular trades and in certain cities, and not to a general upward movement for most of the trades and localities. From 1926 to 1930, the upward movement was somewhat more general. During 1931 there were numerous decreases, in some localities the reduction being general, while in others it was confined to certain trades. During 1932 and 1933 the decreases were general, averaging about 10 per cent, while in 1934 there were decreases in some trades in certain cities but no general downward tendency appeared. In some cases there were increases so that the average decrease was about 3 per cent. In 1935, increases occurred chiefly in Quebec and Ontario, some of them due to the agreements which established minimum wages under provincial legislation as outlined in Appendix D. In 1936 the upward movement continued with, however, decreases in certain trades in a few localities. In 1937 there were increases in several of the localities and in 1938 increases became fairly general. In 1939 there were increases in only a few cases, but in 1940 increases were more common and in 1941 became general, averaging nearly 6 per cent.

Metal Trades

In the metal trades the increase in wage rates from 1915 to 1918 was greater than in most of the other groups, there being a good demand for labour in the manufacture of munitions. During the industrial activity in 1919 and 1920 further increases were made, but in 1921 and 1922 considerable decreases occurred. In 1923 and 1924 some recovery was experienced, in 1925 there was practically no change, from 1926 to 1930 there were some slight changes upward, but during 1931 the changes were downward, while during 1932 and 1933 the decreases averaged 5 per cent and 3 per cent, respectively. In 1934 there were comparatively few decreases, with some increases, so that the average was down less than one per cent. In 1935 wages recovered, being slightly higher than in 1934, and this slight recovery continued in 1936 and became substantial in 1937. In 1938 and 1939, however, the advances were slight. In 1940, increases averaged 4½ per cent, labour conditions having improved greatly because of the growing production of munitions. In 1941 the rate of increase doubled, 9 per cent, there having been many increases in wage rates while a cost-of-living bonus was paid in many cases.

Printing Trades

In the printing trades up to 1920 increases were somewhat less in most of the other industries, but in 1921 when many of the three or five-year agreements between employers and the unions expired, rates were advanced and hours were reduced in many cases. Increases appeared each year thereafter down to 1931. During 1932 decreases of 10 per cent were general in the western provinces and were made in some cities in the east. In 1933 the decreases were general, averaging 5 per cent. In 1934 while there were further decreases there were some increases, the average being down less than one per cent. In each year from 1935 to 1940 there were a few increases. In 1941, higher rates were more in evidence and widespread, averaging nearly 5 per cent greater.

Electric Street Railways

In electric railway service, rates had almost doubled by 1920, but declined slightly in 1921 and 1922, recovering somewhat in 1923 and very gradually each year thereafter until 1931 after which reductions occurred until 1934.

Since 1930, on many of these railways, with reduced traffic, operating costs were lowered to some extent by reducing hours per day, and therefore daily wages instead of reducing hourly rates. In 1934 very few changes in wages were made so that the index number was practically unchanged. Some increases occurred in each year from 1935 to 1939. In 1940 the increases were numerous and in 1941 were more numerous and more substantial, the average rate of increase being about 7½ per cent.

Steam Railways

In steam railway employment, wage increases were considerable in 1918, 1919 and 1920, but in 1921, decreases averaging about 12 per cent for all classes were made and in 1922 decreases for shop crafts, maintenance of way employees and for freight handlers, clerks, etc., were made, averaging about 10 per cent. In 1926, at the end of the year, wages of conductors, trainmen, brakemen, baggagemen, and yardmen were advanced about 6 per cent, that is, by half the amount of the reduction in 1921,

and during 1927 similar increases were made in rates for other classes. In 1929, increases were secured by shop and maintenance of way employees and by certain classes of train crews on some lines. In 1931, while practically all classes were to a great extent on short time, changes in rates were not made until the end of the year when a 10 per cent deduction from each employee's pay was made for train, engine and telegraph service employees from December first. In the early months of 1932 the same deduction was applied to other classes.

In 1933, earnings of employees in engine, train and telegraph services were subjected to a deduction of 20 per cent from May to October, inclusive, and 15 per cent thereafter. The deduction for most of the other classes was increased to 15 per cent in December.

Toward the end of 1934 amendments to the agreements between the railway companies and the employees provided that the general deduction of 15 per cent would be changed to one of 12 per cent on January 1, 1935, and to 10 per cent on May 1, 1935. Early in 1937 an amendment to each agreement provided that the deduction would be as follows: February 1, 9 per cent; April 1, 8 per cent; June 1, 7 per cent; August 1, 6 per cent; October 1, 5 per cent; December 1, 4 per cent; February 1, 1938, 2 per cent; April 1, 1938, none.

No changes were made thereafter until 1941 when a considerable increase in earnings occurred as the result of the payment of a cost-of-living bonus amounting to $1.93 per week from June 1, $2.75 from September 1, and $3.65 from November 16.

Coal Mining

In coal mining the index number reached its peak in 1921, increases having been made in the closing weeks of 1920. In 1922 decreases were made in Nova Scotia and Vancouver Island and in 1923 and 1924 slight decreases occurred in the latter. A substantial decrease occurred in Alberta and southeastern British Columbia in 1924. In 1925 decreases occurred in the three principal districts, being especially steep in Alberta and southeastern British Columbia. Slight increases, however, were provided for a number of classes in some of the mines in Alberta toward the end of the year. In 1926, reductions were effected in Nova Scotia but wages in the other fields were practically unchanged. Slight increases were made in some mines in Alberta in 1928.

In Nova Scotia in February, 1930, rates for labourers were changed by increases of 5 cents to 15 cents per day and certain other datal classes were slightly increased. During 1931 rates of wages were steady but the industry suffered greatly from short time, that is, collieries were operated less than six days per week to a great extent. In 1932 in Nova Scotia rates were reduced 10 per cent in March, except that a minimum of $3.25 per day was provided for in the principal mines. In the other districts rates were reduced only in a few of the smaller mines. In 1933, wages in the Drumheller district in Alberta were reduced more than 10 per cent. In Nova Scotia, rates were unchanged in the principal mines but there were reductions of about 15 per cent in certain mines of medium size. In 1934 partial restorations of these reductions were made in some Nova Scotia mines, while decreases occurred in New Brunswick.

In 1935, increases of about 5 per cent were made in Nova Scotia and in Alberta in the Drumheller and Edmonton districts. In 1937 datal rates in several of the principal mines in Nova Scotia were increased by nearly 10 per cent. In 1938 the rates were increased 5 to 10 per cent in the various districts in Alberta and in the Crow's Nest Pass district in British Columbia. In the principal mines on Vancouver Island in British Columbia average increases of 7 per cent were made. In 1939 there were practically no changes in rates except that in Saskatchewan the terms of settlement of a strike provided that the rates in a new agreement would be retroactive to December 11 with a minuimum rate of 40 cents per hour for labourers. In Alberta in a small number of mines increases in wages were made similar to those in other mines in 1938. In 1940 there were slight increases in Nova Scotia, New Brunswick and Saskatchewan.

In 1941 the principal changes were appreciable increases for some classes in Nova Scotia and the payment of a cost-of-living bonus generally to cover the increase in prices since 1939 making the average increase almost 12 per cent.

The index number for 1901 to 1934 does not include New Brunswick, Saskatchewan and the Princeton district in British Columbia.

The inclusion of these figures for 1934, when weighted according to numbers of miners employed, made no change in the result.

Factory Labour

Factory labour had shown almost the greatest percentage increases up to 1920, both for common labour and for the various trades, but steep decreases appeared from 1921 to 1923 after which the trend was upward until 1931 when a considerable number of decreases occurred. In 1932 decreases in rates were numerous and steep in some cases. There was, however, a pronounced tendency to reduce hours per week or per day or both, frequently on a short-time basis, with relatively small reductions in hourly rates. In some cases, where hours per day were reduced more than daily wages, the hourly rate became higher. In 1933, rates were again generally downward but less steeply.

In 1934 there were numerous increases in nearly all of the manufacturing industries but comparatively few decreases so that the index number rose by nearly 3 per cent. In 1935 the upward movement continued. In Ontario and Quebec this was due to some extent to agreements establishing minimum rates in various localities and industries under provincial legislation. In 1936 wages were increased in many establishments in all manufacturing industries and in 1937 and 1938 the upward movement continued. In 1939 there were comparatively slight increases in nearly all of the industries. In 1940 there appears an average increase of over 4 per cent for skilled and semi-skilled classes and 3½ per cent for unskilled labour. In 1941 the upward trend was much more pronounced; the rates for the skilled and semi-skilled workers were higher by nearly 11 per cent, and those for the unskilled by almost 12 per cent. This was due to the increasing demand for labour in munitions, etc., and also to an extension of the practice of paying cost-of-living bonus.

Logging and Sawmilling

In logging and sawmilling steep increases in wages appeared up to 1920, followed by particularly steep decreases in 1921, after which substantial increases occurred in 1923 and 1924, with a decrease in 1925 and slight increases each year thereafter until 1930 when more decreases than increases appeared. During 1931 decreases were general, and again in 1932, wage reductions of 20 per cent were quite common. In 1933, wages were still downward but there was a pronounced upward trend toward the end of the year for the ensuing season. In 1934, substantial increases in wages were general both in logging and in sawmills so that the index number rose by about 20 per cent. Provincial regulations as to wages in logging in New Brunswick and Quebec came into force that year. In 1935 the increases averaged 5 per cent. In 1936 wages were again upward, the increases averaging nearly 9 per cent. In 1937 the average increase was over 13 per cent and in 1938 was 5 per cent. In 1939 there was an average decrease of over one per cent as the number of decreases in wages reported exceeded the number of increases except in British Columbia where increases were more numerous. In 1940, war orders greatly improved conditions in the industry and wage increases averaged 3½ per cent. This improvement continued during 1941 and combined with a a reduction in the labour available caused an average rise in wages of 10 per cent.

Metal Mining

The wage level of metal miners in 1901 was higher than for other occupations as may be seen in the table of index numbers and, therefore, the general wage level in the industry did not increase so steeply as in most of the other groups though the rise in wages was substantial during the period 1916-1920. By 1922 wage rates had fallen nearly 15 per cent. Some recovery was made the following year and from that time the wage level became stabilized more so than in other industries. In 1931 the index number was down slightly and in 1933 fell to its lowest point since 1920. Since that time there has been a steady increase in wages paid to metal miners, the greatest increase, 10 per cent, occurring in 1941 due in large measure to a cost-of-living bonus being paid generally. The fixing of the price of gold in 1933 at $35 an ounce instead of $20 had much to do with improved labour conditions during the last ten years.

Steamships

Wages of steamship employees, for officers as well as the crew, etc., went up steadily

during the years 1901-16. In 1917 wages rose by 10 per cent followed by other steep increases until 1920 when the peak was reached as in most of the other industries. Except for coal mining the index number in 1920 for steamships was the highest of all groups in the table. In the next two years of general business depression, wages of steamship personnel fell by 10 per cent. There was substantial improvement in the next year and the average wage remained about the same until 1929 when there was a pronounced change upwards continuing in 1930. A marked decline followed in 1931 and this continued until 1935 when a slight improvement took place. This upward movement was accelerated greatly in the period 1937-1940, and the unions secured agreements with substantial increases in wages on the Great Lakes. In 1941 wages again went up, the increase averaging 10 per cent; this increase was made up for the most part by cost of living bonuses.

Laundries

In 1913, the first year in the record for wages in laundries, the index number table indicates a wage level relatively lower fhan for any of the other groups. There were substantial increases, however, during the last war but, unlike the other groups there was no decrease between 1920 and 1922, and the peak of the upward trend was not attained until 1930. This is explained largely by the fact that female laundry workers were the first to come under provincial minimum wage orders and because of this their average wage did not show the decline experienced by other classes of labour. In 1931, decreases were general and this downward movement continued until 1935 when the index number was slightly higher. In succeeding years wages in laundries continued to increase and in 1941 were higher by 7 per cent than in 1940.

Telephones

The index number of wages for the telephone industry is available back to 1920 only. It shows a marked decline in wages in 1931 and 1932 followed by a slight recovery in the following year. The average wage changed little the next three years but went up in 1926 to some extent and continued to rise until after 1932 when the wage level decreased by about 8 per cent. This loss was largely recovered in 1934. There was then little change until 1937 when the index number showed an increase of 5 per cent approximately. The average went up slightly each year since then until 1941 when much larger increases occurred, averaging 10 per cent.

Nature and Scope of Report

The main object of these reports is to show the changes in wage rates and in hours of labour during the periods covered. The figures given in each report afford a continuous record for the years included, the data being from the same sources as far as possible. Whenever a new source of information becomes available, the figures for previous years are secured, if possible, and the record is revised accordingly.

Information is compiled from reports secured annually from representative employers and trade unions, and also from union agreements. The information is obtained in June for building trades, civic employees, steamships, trucking and cartage, longshoremen, logging and sawmilling, pulp and paper mills, and for iron and steel products, including automobiles, parts and accessories. For other trades and industries the information is secured chiefly in September. For the classes covered in June, later information is frequently received and used.

Figures are secured from practically all the large establishments in the various industries and from a representative number of the smaller establishments. These reports are supplemented by figures obtained by officers of the Department and by resident correspondents of the Labour Gazette in the principal industrial centres.

Wages in manufacturing are shown by samples numbered one, two, etc., each sample showing the predominant rate in a certain establishment; in some cases, for large establishments two or three samples are given; in other cases where the same rate is paid by a number of firms a sample may represent several such firms in order to avoid repetition. Additional samples of rates above or below

the predominant rates have been included where an appreciable number of workers were receiving such rates; where it appears to be preferable a range of predominant rates is used. The locality in each case is not given as it would in many instances make possible the identification of the particular establishment. For common labour in factories sample rates are given by localities for the principal manufacturing centres only.

For the following industries wages are given in the form of samples as in the case of factory labour: steamships, grain elevators, electric current production and transmission, telephones, laundries, logging and sawmilling, and metal mining.

Figures for particular localities are given for building, metal, and printing trades, electric railways and civic employees in Tables I and II, and for trucking and cartage, and longshoremen in Table III, also for common labour in factories in Table IX.

The statistics as to building trades show the prevailing rates of wages and hours of labour for nine classes of labour for the years 1920, 1926, and for 1929 to 1941 inclusive, for the building season beginning in the spring of each year. During the year 1931, however, changes occurred later in the season more extensively than is usual, and the rates in effect at the end of the year were therefore obtained and included. For 1933 a similar survey was made again toward the end of the year in several cities. As in all previous years, changes in rates reported down to the end of the year, from the sources mentioned above, are included. In Nova Scotia, Quebec, Ontario, Saskatchewan and Alberta, the rates include agreement rates made obligatory on all employers affected under provincial legislation as to collective agreements and industrial standards; in British Columbia they include minimum rates for the construction industry under the Male Minimum Wage Act, and in Manitoba under the Fair Wages Act. Such rates of wages and hours of labour are given in Appendix D.

On steam railways, wages of employees on the regular staffs are fixed according to agreements between the several railways and the employees, members of the organizations of railway employees, the principal railways having the same rates for nearly all the principal classes. The figures published are taken from these agreements.

In water transportation the organizations of various classes of employees negotiate scales of wages, hours and working conditions with many of the steamship companies although agreements are not always signed; other operators tend to pay about the same rates.

In coal mining, the wages in the principal districts are arranged by agreements between the coal mining operators and the employees, in most cases represented by unions and in others by committees of employees. The figures published from 1920 to 1923 were taken from such agreements. The figures for average earnings of contract miners, however, were received from representative employers in each district. In some of the mines in these districts the wages of unorganized employees are somewhat lower than the rates in the agreements. For Report No. 18, and subsequent reports, statements as to wage rates and hours of labour have been requested from the operators of all the larger mines throughout Canada and the figures so secured have been compiled by provinces or districts. The resulting figures include those for many mines not operated under agreements as to wages and working conditions, and cover the mines in New Brunswick, Saskatchewan and the interior of British Columbia for which figures were not previously published.

In metal mining the rates of wages and hours of labour are shown as samples for mines in the various parts of Canada, secured from representative employers.

In logging, Table VII, the data each year is for the season beginning in the autumn and ending in the spring in Eastern Canada.

Data as to Hours

In earlier reports the hours of labour shown throughout were the standard or regular hours per week, per day, etc., and did not indicate the hours actually worked either overtime or on short time. During 1931 a number of establishments in many of the manufacturing industries reported operations on a short time basis. In the report for that year, No. 15, covering the years 1926, 1930 and 1931, standard or full-time weekly hours were shown as before, with full-time weekly or daily earnings where hourly wages were not used.

In Report No. 16, however, with figures for 1930, 1931 and 1932, in the tables on manu-

facturing industries, the hours of labour for these years were those reported by employers, whether short time or regular hours, and the wage rates were brought to an hourly basis, except in certain industries—clothing, bread, cake, biscuit, candy, brewing and paper box making—for which regular hours were reported chiefly, employees being usually paid by the week. The same procedure has been followed in subsequent reports except that wages for boot and shoe manufacturing are given on a weekly basis with the hours shown as reported. In this industry, as in some instances in clothing manufacturing, the hours actually worked by individual piece workers are not always reported and the hours shown are those on which the department or factory is operated.

Index Numbers of Wage Rates

In Report No. 1 tables of index numbers were given in order to show the general trend of the movement in rates of wages. The first set of index numbers was for the rates of wages from 1901 to 1920 in the thirteen selected cities. From the record for each trade or occupation in each locality, an index number was calculated both from the hourly rates and from the weekly rates, and these index numbers were averaged for all localities, by groups, thus indicating the relative changes in weekly rates and in hourly rates. The year 1913 was taken as the base period, that is the rate for 1913 in each case was taken as 100, so that the index numbers showed the percentage changes in rates from year to year prior to and since that date. An average index number was made for the five groups of trades for which figures were available back to 1901. In making the average index numbers the simple arithmetical averages were taken, no allowance being made for the importance of each trade or group by using a system of weighting. In Report No. 3 this table of index numbers for the thirteen cities was brought down to September, 1921. In Report No. 4 an index for coal mining, published in detail in Report No. 3, was added to the table making six groups back to 1901.

In subsequent reports the index numbers of hourly rates from 1901 to 1921 were reproduced, with figures since 1921 calculated by ascertaining the average increase or decrease per cent in the figures for each group each year from the figures for the preceding year and adjusting the group index number accordingly. The index numbers therefore showed approximately the movement of wage rates in each group for the past year as compared with the movement in previous years and showed current levels as compared with levels in 1913. In Report No. 3 index numbers of daily wages in coal mining were given, calculated in the same manner as the index numbers in Report No. 1. The index number for the coal mining group since 1921 has been calculated in the same manner as those for the other groups. The index numbers for metal trades, previously calculated from Section *b* which was omitted from Table I for 1931 and 1932, were calculated from the average percentage changes in the samples for such trades in Table X for those years.

A table of index numbers of wages for factory trades, for common labour in factories, and for lumbering (logging and sawmilling) calculated from the sample rates published was also given for the period 1911 to 1920 in Report No. 1. These figures have been brought down to 1941 in the same manner as the other index numbers since 1921 were calculated but in the report for 1940 (No. 24), the table was published not only on the 1913 base but also on a new base 1935-1939 as 100, the same as that for the cost of living index number.

Weighted Average Index Numbers

Beginning with Report No. 19, in addition to the simple average for the six groups with figures from 1901 to 1937, weighted averages were calculated for those six groups and also for all nine groups in those years for which figures are available. The index number for each group was weighted by the average number of wage-earners in the industry represented, as shown by the decennial or the annual industrial census of 1921 and of 1931, the average of the figures for these two dates being taken in each case.

The weights were as follows (in thousands): building trades 143; metal trades 131; printing trades 25; electric railways 18; steam railways 161; coal mining 28; common factory labour 110; miscellaneous factory trades 363; logging and sawmilling 77.

Weighting, within groups, although desirable, has not been done. In such groups by occupations or industries weighting makes comparatively little difference as rates of wages for the various classes of labour tend to rise and fall to the same extent even in different localities. In most of the groups the index numbers, being calculated from samples, the averages are automatically weighted by the number of samples which vary according to the number of workers in the various occupations and industries.

Index Number on Basis of Wages in 1935-1939 as 100

The index number previously published as outlined above was on the basis of wages in 1913 as 100 to correspond with the index number of changes in the cost of living, published by the Department in the LABOUR GAZETTE, and which was also on the basis of prices in 1913 as 100. A new official cost of living index number for Canada was constructed by the Dominion Bureau of Statistics on the basis of prices in 1935-1939 as 100. This was published in the LABOUR GAZETTE for October, 1940, and in subsequent issues. It is, therefore, desirable to have a wage index number on the same base. The figures in the old index number have therefore been converted to the base 1935-1939. The new table of index numbers first appeared in Report No. 24 along with the old one. In this report, No. 25, only the table on the new base is included but the index numbers on the 1913 base for 1941 in continuation of the table previously published are shown in a footnote to the table on page 6.

For each group the figures in the earlier index were averaged from 1935 to 1939, and the resulting average divided into the figures for each year from 1901 to 1940, multiplied by 100. The average for all groups in each year was made by averaging the group figures weighted according to the approximate number of workers in each, as had been done for the earlier index since 1935 as described above.

Index figures for four new groups have been calculated and were included in the new index. The weights for these were as follows: metal mining 30, steamships 16, laundries 19 and telephone employees 18. The weight for metal mining was derived from the number of employees in 1921, 1931 and 1938, whereas for the other industries the weights were derived from the number employed in 1921 and 1931 as shown by the census. In metal mining there has been a much greater increase in numbers employed than in other industries.

The index for the Logging and Sawmilling group has been recalculated, rates of wages for many additional employees being included in the calculation which was carried back to 1901 instead of only to 1911. The general index is therefore revised to include the changes in this group.

*Minimum rate and hours approved under the Industrial Standards Act: New Brunswick, 1939; Ontario, 1935.

**Beginning in 1934, agreements approved by Order in Council under the Collective Labour Agreements Extension Act, Quebec, 1934, established minimum rates of wages for various trades in certain cities, towns and other defined jurisdictional territory throughout the province. On May 1, 1937, the Collective Labour Agreements Extension Act, Quebec, 1934, was replaced by the Act entitled an Act Respecting Workmen's Wages. On March 18, 1938, the Act respecting Workmen's Wages was replaced by an Act entitled The Collective Labour Agreements Act. On June 22, 1940 this latter Act was replaced by an Act entitled the Collective Agreement Act. The rates indicated for 1941 and the minimum rate in each range for previous years are those approved under these acts, except for stonecutters.

* Maximum rates based on length of service.

‡ Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.

† Including armature winders, wiremen, etc.

§ Including troublemen and, in some cases, groundmen; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities, rates for which are included here.

(*a*) Deduction from earnings, 10 per cent.

§*Locomotive and Car Shops—*							
†Mechanics, per hour	cents	85	77	70	70	74	79
‡Other carmen, etc., per hour	cents	80	72	63	63	67	72
Helpers, per hour	cents	62*a*	54*a*	47*a*	47*a*	51*a*	56*a*
Electrical workers, electricians, per hour	cents	85	77	70	70	74	79
Electrical workers, linemen, per hour	cents	81	73	66	66	70	75
Electrical workers, groundmen, per hour	cents	75	67	60	60	64	69
Electrical workers, operators, per hour	cents	68	60	53	53	57	62
Coach cleaners, per hour	cents	50	42	38	38	42	44
Shop labourers, per hour	cents	48½	40	35	38	40	40–42

*Differentials on certain lines or divisions above these rates. Nearly all classes are on the basic 8-hour day with time and one-half for overtime.

†Machinists; boilermakers; blacksmiths; plumbers, etc.; sheet metal workers; cabinet makers; carpenters, coach, locomotive and bench; welders, etc. ‡Freight car carpenters; freight car painters; car inspectors, car repairers, etc. §Since 1918, employees are allowed approximately one cent per hour extra for checking in and out.

(a) On Western lines Port Arthur and West, until 1929 in addition to these rates boilermakers' helpers received 5½ cents; blacksmiths' helpers, 4 cents, and other helpers 3 cents; since May 1, 1929, the differentials on western lines were boilermakers' helpers 4 cents, other helpers, 2 cents.

(b) Deductions from each employee's earnings on basic rates effective as follows. Train, engine and telegraph service, 10 per cent Dec. 1, 1931; 20 per cent May 1, 1933; 15 per cent Nov. 1, 1933; Maintenance of way and bridge and building, 10 per cent May 1, 1932; 15 per cent Dec. 1, 1933; Locomotive and car shops, 10 per cent April 1, 1932; 15 per cent Dec. 16, 1933, with certain exceptions. Deductions amended for all classes effective as follows: Jan. 1, 1935, 12 per cent; May 1, 1935, 10 per cent; in 1937, between February and December reduced to 4 per cent; in 1938, eliminated by April 1.

(c) Effective July 16, 1922 until Nov. 1, 1922 when rates in 1923-26 column were made retroactive to July 16, 1922.

(d) Cost of living bonus: $1.93 per week June 1, 1941; $2.75 Sept. 1; $3.65 Nov. 16.

† Rates include board and lodging and vary to a great extent according to size or type of vessel. Hours on duty for officers, seamen, deckhands, etc., generally average twelve per day seven days per week except when in port; for engineers, firemen, oilers, etc., hours generally average eight per day, but twelve in some cases; for stewards, cooks, etc., hours vary according to requirements. All classes may be required for extra duty at any time, especially in the Great Lakes and Upper St. Lawrence service when passing through canals. On most of the British Columbia coastal passenger vessels hours for all classes average eight per day, 6 days per week, with extra pay for overtime. Some of the tug-boat employees in all areas are on the eight-hour day.

* The figures given for contract miners are the average earnings at piece rates and for some mines the figures include helpers and loaders on piece work; the figures given for machine and hand miners are rates per day.

† Higher rates are paid in two or three mines for some of these classes; also in the large mines for certain positions.

‡ Several mines have changed to steam shovel operation.

(a) Most of the samples represent piece work earnings; in these cases factory hours are shown which are not necessarily the hours actually worked.

*1930—data for 1929 not available but wages in the industry were practically unchanged in 1930.

* Figures for the Yukon Territory were included under British Columbia in 1921, but have been compiled separately since. For several years two to four miners were employed from 50 to 100 days, wages averaging about $8.00 per day; in 1939 and 1940 no coal was mined. In Manitoba mining operations began in 1931, small numbers being employed, 4 in 1940, averaging $2.40 per day.

† Prolonged dispute during year.

‡ Figures calculated by dividing number of man days worked into total wages paid.

§ Prior to 1933 the figures for Nova Scotia included certain employees handling coal at a distance from the mine.

APPENDIX D

WAGES AND HOURS OF LABOUR IN FEDERAL GOVERNMENT CONTRACTS AND UNDER PROVINCIAL LEGISLATION

Provincial legislation on wages and hours and the regulations thereunder, as well as the provisions regarding wages and hours for work on Dominion Government contracts, were summarized in full in the Report on Wages and Hours of Labour in Canada, 1929, 1939 and 1940, Appendix D (pp. 150-214). The present Appendix is a supplement to that summary and merely outlines the changes made during 1941 and the first six months of 1942. On pp. 153 and 173, however, there are tables showing generally the minimum wage rates and maximum hours of work in effect at the present time in the main types of establishments in the various provinces.

In the second sub-section below the war-time wages control policy of the Dominion Government is summarized.

Federal Government

Government Contracts

The Order in Council of December 31, 1934, fixing minimum wage rates for work on Government contracts for the manufacture of supplies, was amended by P.C. 3884, May 30, 1941. The rates for workers 18 years of age and over were raised to 35 cents per hour for men and 25 cents for women though lower rates were permitted for beginners and special provision was made for handicapped workers. A fine was provided for failure to pay the prescribed rates.

On October 4, 1941, P.C. 3884 was replaced by P.C. 7679. The rates of 35 cents and 25 cents for adults were retained and a rate of 20 cents per hour was fixed as the minimum for workers under 18. The provisions relating to beginners were clarified and it was stipulated that not more than 20 per cent of the total number of employees could be paid the beginners' rates. Provisions contained in the Order in Council of 1934 relating to posting notices and maintaining records were re-stated, and the fine for non-compliance was substantially increased.

An Order in Council of November 23, 1940 (P.C. 6801) had made the Deputy Minister of Labour responsible for the investigation of claims for wages at the rates set forth in the schedules embodied in contracts for public works and other construction under authority of the Fair Wages and Hours of Labour Act, 1935. It also set forth a procedure for the settlement of claims which on investigation were found to be justified. By P.C. 7679, the terms of this Order in Council were applied also to contracts for the manufacture of supplies.

In the early part of 1941 a co-operative scheme was worked out between the Dominion and Provincial Labour Departments whereby the inspection staffs of the latter could be used in the enforcement of the wages and hours conditions on Dominion contracts. This scheme was put into effect by P.C. 5522, July 22, 1941, which authorized the Minister of Labour to appoint provincial officials and other persons as inspectors and provided penalties for any person who obstructed the work of an inspector.

By the Wartime Wages and Cost-of-Living Bonus Order of October, 1941, (see below) a National War Labour Board was set up and the administration of P.C. 7679 and the Fair Wages and Hours of Labour Act, 1935, was made the responsibility of this Board. P.C. 1774, March 9, 1942, was then passed, replacing P.C. 5522. It authorized the Minister of Labour to appoint provincial officials and others as inspectors not merely for the Fair Wages Policy but also for the Wartime Wages Order and to designate any provincial department, board, etc., as his agent or the agent of the National War Labour Board for the purposes of supervising the staff carrying out inspection duties.

The Wartime Wages and Cost-of-Living Bonus Order prohibited increases in the basic wage rates in effect on November 15, 1942. In some cases, however, the payment of the wage rates set forth in the schedules to public works contracts under authority of the Fair Wages and Hours of Labour Act, 1935, would represent an increase in basic wage rates. P.C. 5518 was therefore passed on June 29, 1942, to authorize increases in the basic rates in these cases. At the same time, in order that the control of wages might be maintained, the National War Labour Board may establish a range of wage rates in the schedules it prepares, and rates higher than the highest in the range may not be paid without permission. Similar provisions were made with regard to government contracts for the manufacture of supplies by the Wartime Wages Control Order (see below).

Control of Wages

The control of wages, which is complementary to the control of prices, was first undertaken in P.C. 7440, December 16, 1940, at a time when price control was still confined to individual commodities. P.C. 7440, which was amended by P.C. 4643, June 27, 1941, and later repealed by P.C. 8253, October 24, 1941, was declared to apply to industries coming under the Industrial Disputes Investi-

gation Act which had been extended to war industries in November, 1939. It served as a guide to Boards of Conciliation and Investigation whose recommendations on wages had previously been somewhat conflicting. It was designed to conform to the Government's anti-inflationary policy without placing undue hardship on wage-earners. Wages were to be stabilized at the 1926-1929 level except in cases where the level could be shown to be unduly low, and a flat-rate cost-of-living bonus was provided.

The Wartime Wages and Cost-of-Living Bonus Order (P.C. 8253, October 24, 1941, as amended) repealed P.C. 7440 and was, in turn, repealed by P.C. 5963, July 10, 1942. It was first issued at approximately the same time as the comprehensive price control policy was introduced and it extended, with some modification, the principles of P.C. 7440 to all employers. No changes were permitted in the wage rates in effect on November 15, 1941, though provision was made for the raising of rates which were unduly low. At the same time, a flat-rate cost-of-living bonus was payable which was to be adjusted in a prescribed manner with changes in the cost-of-living index. Provision was made for permanent enforcement machinery in the form of a National War Labour Board which, with the assistance of nine Regional War Labour Boards, administered this Order together with the Fair Wages and Hours of Labour Act, 1935, and P.C. 7679 (see previous section). These Boards consist of employers' and employees' representatives under the chairmanship of the Dominion and Provincial Ministers of Labour.

The Wartime Wages Control Order (P.C. 5963, July 10, 1942) amends and consolidates the Wartime Wages and Cost-of-Living Bonus Order. The National and Regional War Labour Boards, whose constitution and functions are practically unchanged, continue to administer the new Order and the Fair Wages Policy. The principal changes in the new Order are as follows: (1) The basic wage rate is defined in terms of a range of wage rates as well as of a single rate. An employer may now, without special permission, increase or decrease the rate paid to a worker if the increase or decrease is within the limits of a range, if the worker has been promoted or demoted, or if a work element forming part of the operation he performs has been added or removed; (2) P.C. 5518 (see previous section) has been incorporated in almost identical language in the present Order. Moreover, it is also provided that an employer must increase the basic rate or range of rates paid by him if it is necessary to do so to meet the requirements of P.C. 7679 regarding minimum wages for work on Government contracts for the manufacture of supplies; (3) The enforcement provisions have been made more stringent.

As was stated in the previous section, the Minister of Labour has power, under P.C. 1774, to appoint inspectors for the enforcement of the Wages Control Order.

The wartime control of wages has been supplemented by a similar policy regarding salaries. The Wartime Salaries Order was originally established by P.C. 9298, November 27, 1941. P.C. 9298 was amended by P.C. 946, February 6, 1942, and was then repealed by the amending and consolidating Order in Council, P.C. 1549, February 27, 1942, which, in turn, was amended by P.C. 4346, May 26, 1942. It applies to persons receiving $175 or more per month except for persons not above the rank of foreman. A person receiving $250 or more per month is considered to be above the rank of foreman unless it is clear from the nature of his duties that he is not. It is provided that no salaries may be increased above the level of November 7, 1941, but in certain cases, where the salaries of persons who had assumed new duties in war industries have not been adjusted, increases are permitted. A cost-of-living bonus is to be paid in the case of salaried officials earning less than $3,000 per year. The Order is administered by the Commissioner of Income Tax.

Minimum Wages Under Provincial Legislation

The following is a summary of the changes made in minimum wage regulations between January, 1941, and July, 1942. The table on p. 153 shows the minimum rates at present in effect for full-time experienced workers in factories, shops, offices, hotels and restaurants. No changes were made during the period under review in the minimum wage laws or regulations of Prince Edward Island or Ontario, and, except in the table, no further reference is made to these provinces in this section.

The situation as it was at the end of 1940 is summarized in the 1940 Report, pp. 151-182. For complete information regarding both the situation at the end of 1940 and the changes made since then, it is necessary to refer to the orders issued by the provincial authorities. Fairly complete summaries are published in the Labour Gazette as the orders are gazetted.

Nova Scotia

In accordance with the Federal Government's policy for the stabilization of basic wage rates and the payment of a flat-rate cost-of-living bonus, an increase of $1, which is to be regarded as a cost-of-living bonus, has been made in all the weekly rates established by orders under the Minimum Wage for Women Act.

WEEKLY MINIMUM WAGE RATES IN THE CANADIAN PROVINCES FOR EXPERIENCED WORKERS
JULY 1942

Type of Establishment	Sex	British Columbia	Alberta	Saskatchewan	Manitoba*	Ontario	Quebec	Nova Scotia
Factories	F.	$14	$12.50	$13 in cities and in towns of Canora, Estevan, Humboldt, Kamsack, Lloydminster, Melville, Shaunavon, Wynyard and a radius of 5 miles.	$12 in cities, $10 rural.	$12.50 Toronto, $11.50 population of 50,000 and over, $11 population of 5,000 to 50,000, $10 rest of province. $12.50, textiles.	26c. per hour, Zone I (Montreal and district, Laprairie, Longueuil, St. Lambert, Laval-des-Rapides); 24c. Zone II (Quebec and district and towns over 10,000); 22c. Zone III (Terrebonne and towns 2,000-10,000); 20c. Zone IV (elsewhere). *(c)*	$12 towns of 17,000 and over, $11 other towns.
	M.	40c. an hour. *(a)*	33¾c. & 40c. *(b)*	As above	As above	Textiles $16	As above	No legislation
Shops	F.	$12.75	As for factories	$14 in cities and in towns specified above, and a radius of 5 miles.	$12 department stores and mail order houses in cities, retail and wholesale stores in cities and summer resorts, $10 rural.	$12.50 Toronto; $12 Ottawa, Hamilton, London, Windsor; $11 population 10,000 to 50,000; $10 population 4,000 to 10,000; $9 population 1,000 to 4,000; $8 rest of province.	As for factories *(c)*	As for factories
	M.	$15	As for factories	As above	As above	No orders	As for factories	No legislation
Offices	F.	$15	$14	No orders	$12.50 Winnipeg, St. James, St. Boniface and Brandon.	As for shops	25c. per hour, Zone I; 22½c. Zone II; 20c. Zone III; 15c. Zone IV.	As for factories
	M.	No orders	As for factories	No orders	No orders	No orders	As above	No legislation
Hotels and Restaurants	F.	$14	$12.50 except in hotels in places of less than 600 inhabitants, $10 in latter.	$12, $10 kitchen help, $8 bellboys, etc.	$13 in cities, certain towns and summer resorts, $11 rural.	26c. per hour in Toronto, 25c. per hour, Ottawa, Hamilton, London and Windsor, 22c. per hour where population 10,000-50,000; 20c. where population 4,000-10,000.	Cooks: 30c. per hour, Zone I; 25c., Zone II; 15c., Zone III; 12c., Zone IV. Kitchen help: 25c. (I); 20c. (II); 14c. (III); 12c. (IV). Waiters, chambermaids, elevator operators, etc.: 20c. (I); 16c. (II); 13c. (III); 10c. (IV). Bellboys, doorkeepers: 10c. (all Zones). *(d)*	As for factories
	M.	No orders	As for factories, $15 in hotels in places of less than 600 inhabitants.	As above	As above	No orders	As above	No legislation

(a) For those over 21 in sawmills, woodworking plants, and baking.
(b) For those over 19 employed by week or longer and those over 19 employed in any other manner, respectively.
(c) In Quebec in shops and in factories not covered by a special order, at least 60% of all workers must receive the rates indicated here. Lower rates are fixed for 25%, and for not more than 15% the rates may be as low as 17c., 15c., 13c. and 12c., depending on the zone. Under the special orders applying to hosiery, tailoring, laundries, hides and leather, silk and cotton, box and sash factories, brickyards and some local industries, the percentages vary to which the several rates apply and the rates are usually hourly rates.
(d) Hotels with 50-100 rooms in Zones III and IV must pay rates for Zone II when the rooms are rented.
* The Manitoba Minimum Wage Act fixes a general minimum of 25 cents per hour for any employee 18 years or over for whom the Board has not fixed a different rate.

There have also been some changes in the weekly hours of work to which the minimum rates apply. In all establishments, except shops, beauty parlours and offices, they apply to a week of from 44 to 48 hours rather than to one of from 44 to 50 hours, and in laundries they apply to the normal week if that is less than 44 hours. In shops, beauty parlours and offices they apply to a 48-hour week.

Formal changes have been made in the geographical classification in the order relating to laundries, dry cleaning establishments and dye works. The rates which formerly applied to "Halifax, Sydney and Glace Bay" now apply to "Cities and towns of 17,000 population and over," and those which applied to "Other incorporated towns" now apply to "Towns under 17,000 population". There is no longer any provision for deductions from the wages of workers in laundries for board and lodging.

New Brunswick

Since the end of 1940 two new orders have been issued under the Labour and Industrial Relations Act, 1938, applying to fish, fruit and vegetable canneries in northeastern counties and to establishments in the same counties which manufacture or repair equipment used in canneries or in the fishing industry. All male employees 18 years of age and over must be paid at least 25 cents per hour. Boys under 18 and women must receive at least 15 cents. Piece-workers must be paid at rates which will ensure that they do not receive less than the minimum hourly rates. Deductions for board and lodging are permitted at the rate of 50 cents per day. All workers must be paid at least semi-monthly.

Two orders are issued annually under the Forest Operations Commission Act, 1934. The first, appearing every spring, applies to river operations and the other, which is issued in the fall, covers forest operations.

For stream driving no minimum rates for individuals are set, but a minimum average rate is fixed. This average, which in 1940 was $2.85 per day with board, was raised to $3.25 with board in 1941 and $3.50 in 1942. For piece-work the equivalent of this must be paid. Wages paid to cooks, foremen, bookkeepers, and clerks may not be included in determining the average.

For the other river operations, viz., booming and sorting, the minimum for individual workers which was 28 cents per hour in 1940 was raised to 32½ cents in 1941 and 35 cents in 1942. Where board is furnished not more than 50 cents per day may be deducted.

The increases made in 1942 were in lieu of cost-of-living bonus and were approved by the Regional War Labour Board for New Brunswick. This Board also established a maximum of $3.75 per day with board for stream-drivers and 37½ cents per hour for boomers and sorters. However, workers who in 1941 were receiving rates higher than these may continue to receive their 1941 rates.

For cutting, peeling, yarding and hauling, th minimum below which the average could not fall was $40 per month with board in the winter of 1939-40. This was raised to $50 per month with board in 1940-41 and to $52 in 1941-42. The minimum for any individual employee was fixed at $36 per month with board in 1939-40, at $45 in 1940-41 and $47 in 1941-42. Piece-workers may not be paid less than these amounts, and the wages paid to cooks, tractor operators, truck drivers, foremen, bookkeepers, clerks and piece-workers may not be included when the average is determined.

Quebec

Since the end of 1940, a new Order 4 relating to all workers not covered by other orders has been passed replacing the former one, an order under the Minimum Wage Act has been issued to replace the three orders which had been passed originally under the Forest Operations Act, new orders were issued for the taxicab business and for taverns in the Montreal District, orders have been issued for the first time relating to cinemas and theatres in the Montreal district and to work in peat bogs, and a number of other orders have been amended. An order was also passed governing shoe-repairing establishments in the Montreal district, but it was abrogated on January 10, 1942, less than two months after it had come into effect.

Because of the war, provisions in all orders relating to hours of work and weekly rest have been relaxed. It was noted in the 1940 Report that the provision of the old Order 4 limiting the hours of men to 72 per week and those of women to 55 was suspended for establishments engaged on war work by a resolution first adopted on September 1, 1939. The provision of the same order requiring a weekly rest day for all workers covered by the order was suspended for war establishments on June 1, 1940. The new Order 4 which came into effect on April 11, 1942, omitted altogether the provision limiting hours, and declared that the weekly-rest-day provision does not apply to war establishments. On October 1, 1941, a special order was issued providing that any provision in orders other than Order 4 which limited hours or required a weekly rest day would not apply to war establishments for the duration of the war.

Order 4, 1942, which came into effect on April 11, repeals the previous Order 4 and all amendments, rules of interpretation, resolutions and permits or exemptions. Like the old Order, it applies to all workers contemplated by the Minimum Wage Act except those governed by a special order. There have been few basic changes but the numerous amendments have been consolidated and there has been considerable re-arrangement of the provisions.

The minimum hourly rates and the weekly hours to which they apply are, except in a few cases, the same as in the previous order. However, there has been some reclassification of employees, and moreover, minimum rates are no longer stipulated on a weekly, monthly or yearly basis but solely on an hourly basis. A table therefore appears on pp. 156-7, which summarizes in full the provisions of the new order relating to wage rates and normal weekly hours and replaces the table appearing on pages 158-160 of the 1940 Report.

The provisions relating to apprentices or inexperienced workers, overtime rates of pay, and the wage-rates of part-time workers are the same as in the old order (1940 Report, pages 156-157) except that employees working less than 30 hours per week are now entitled only to the regular minimum rate for their class rather than to 15 per cent extra.

The deductions which are now permitted for board and lodging (by agreement between the employer and worker) are as follows: for a single meal, 25 cents in Zone I, 20 cents in Zone II and 15 cents in Zones III and IV; for lodging, 30, 25 and 20 cents per day in the various zones; and the complete board, $6, $5 and $4 per week. In mining camps in Abitibi and Temiscamingue, and in mining and construction camps in Zone IV, 31 cents may be deducted for a single meal, 25 cents for a day's lodging and $7 for complete weekly board. The monthly wages for commissary clerks, etc., in camps are the same as in the old order.

A new order for forest operations came into force on May 3, 1941. It replaced three orders issued under the Forest Operations Act which had been continued in force after the repeal of that Act by the Minimum Wage Act, 1940. It applies to all the operations covered by the superseded orders, viz., cutting and transporting pulpwood, firewood and sawlogs, and river operations. The minimum wage rates it requires are set forth in the table on p. 157. For certain occupations, which are indicated in the table, the rates are for work done during a 60-hour week, and extra hours must be paid on a pro rata basis. As under the former orders, board and lodging must be provided in addition to wages, except to piece-workers for whom a maximum deduction of 60 cents per day is permitted.

New orders were also passed for the taxicab and automobile-for-hire business, and for taverns in the Montreal district. These orders, which came into effect on April 19 and August 2, 1941, respectively, supersede the orders summarized on pp. 157 and 163 of the 1940 Report. Since the minimum rates of practically all the classes of workers covered have been raised, new tables have been drawn up (p. 158) replacing those in the 1940 Report. The 1940 table for taxicabs and automobiles for hire covered not merely the Montreal district but also Quebec and Levis. This latter area, therefore, has been included in the present table, although no changes have been made in the rates in effect there.

In taverns in the Montreal district overtime must be paid for hours in excess of 12 per day or 54 per week at the rate of 1½ times the minimum rate. Bartenders working less than 40 hours per week must be paid 56 cents per hour and waiters 40½ cents per hour. Bartenders with less than 648 hours' experience may be paid 25 cents per hour.

Taxicab drivers in the Montreal district may not be at the wheel for more than 12 consecutive hours. For hours in excess of 66 per week, they must be paid 40 per cent of the gross receipts collected during the overtime if they are working on a commission basis. If they are paid by the hour they must receive 1½ their regular hourly rates. All other employees in taxicab and automobile-for-hire establishments must also be paid 1½ times their regular wage rates for hours in excess of their normal work weeks (see table). Temporary drivers must receive 40 per cent of the gross receipts up to five hours with a minimum of $1, and 20 cents per hour thereafter. Those working by the hour must receive 30 cents per hour with a minimum of five hours' pay.

Minimum rates were set for the first time for theatres and cinemas in the Montreal district and for work on peat bogs by orders which came into force on May 31 and August 24, 1941. The rates established by these orders are indicated in the tables on p. 158. For the various classes of employees in theatres and cinemas the rates apply to a specified number of hours per week (see table) and hours in excess of these must be paid at 1½ times the regular rate of the individual employee. Stage-hands and musicians who work less than four days per week must be paid $2 for one show, $3.50 for two shows in one day and $5 for three shows in one day. Workers in peat mills must be paid special rates for hours over 54 per week between May and November in-

clusive and over 48 during the rest of the year. These rates are 37½ cents per hour for 75 per cent of the workers and 30 cents for the remainder. Those working less than 40 hours per week must receive 25 cents per hour.

The following changes in other orders should be noted. Page references are to the 1940 Report. In cotton textiles (pp. 157, 162) the hours beyond which overtime had to be paid were formerly 10 per day and 50 per week for most classes of workers. These have been changed to 10 and 48. The minimum and average rates of all workers in silk textiles (p. 162) were raised by 4 cents on July 5, 1941. An increase of 10 per cent for all classes engaged in the manufacture of wooden boxes, etc. (p. 164) went into effect on October 4, 1941. A similar increase was to have taken effect on November 23 in the wages paid to workers covered by 13 other orders, but since the Federal Government's Wartime Wages and Cost-of-Living Bonus Order had by then come into effect, they were cancelled. Because of special circumstances, however, the increase was brought into effect for stationary enginemen in the Montreal district (p. 161) on April 12, 1942.

MINIMUM WAGE RATES IN QUEBEC[1]

MALE AND FEMALE EMPLOYEES

Industries and Occupations	Minimum per hour			
	Zone I[2]	Zone II	Zone III	Zone IV
	cts.	cts.	cts.	cts.
Order 4				
Industrial and commercial establishments (48-hour week[3])	26, 22, 17[4]	24, 20, 15	22, 18, 13	20, 16, 12
Office workers (48-hour week[5])	25, 17[6]	22½, 15	20, 13	15, 12
Transport and delivery service, garage mechanics[7]				
Drivers of horse-drawn or motor vehicles, n.e.s. (60-hour week)	25	20	18	15
Drivers of trucks, 5,000 lbs. and over, and buses (60-hour week)	30	25	23	20
Helpers and messengers delivering articles of over 25 lbs. (60-hour week)	20	18	16	14
Other messengers, and delivery boys on foot, bicycle or accompanying drivers[8]	10	10	10	10
Garage mechanics (60-hour week)	40	35	30	25
Hotels, restaurants, etc. (60-hour week)[7 9]				
Waiters, chamber-maids, bartenders, elevator-operators	20	16	13	10
Cooks	30	25	15	12
Kitchen help	25	20	14	12
Bell-boys, porters, and check-room clerks	10	10	10	10
Tavern and bar-room workers	25	25	25	25
Boarding houses, lodging-houses[10]	15	13	12	10

[1] These tables are supplementary to those appearing on pages 158-165 of the 1940 Report and supersede any inconsistent parts of them. Other changes which must be made in the latter tables are summarized in the text.

[2] Zone I consists of Montreal, Laprairie, Longueuil, St. Lambert, Laval-des-Rapides and municipalities on the Island of Montreal. Zone II consists of Quebec, Quebec-West, Iberville and towns of over 10,000 inhabitants. Zone III consists of Terrebonne and towns of from 2,000 to 10,000 inhabitants. Zone IV consists of the rest of the province.

[3] Unless otherwise stated. The following establishments are specifically mentioned as subject to this week: banks, insurance companies, stock and bond brokers, radio broadcasting, telephone companies, electric and gas companies except retail departments, waterworks except municipal corporation waterworks, amusement halls, and laundries except where covered by a special order. Sash and door factories are subject to a regular work-week of 50 hours. In the following the rates apply to a 54-hour work-week: manufacture of narrow fabrics, retail shops, butcher and pork shops, stove-repair shops, crushed stone quarries, post offices, barber shops and hairdressing establishments, cheese processing establishments, bakeries, theatres and cinemas, manufacture of felt hats, meat packing establishments, manufacture of rubber goods, biscuits, chocolate, flour, concrete pipes, organs, coffins foundries in Zone II, bootblacks, fox farms and funeral undertaking establishments in Zones I and II. Rates apply to a 60-hour week in sawmills in Zones II, III and IV, foundries in Zones III and IV, farm implement factories including separator factories in Zones III and IV, funeral undertaking establishments in Zones III and IV, dairies, creameries, cheese factories, waste material trading establishments, hotels and restaurants, transport undertakings, wool carding establishments during May to August, public corporations, apartment houses, real estate undertakings, office buildings and employees taking care of horses used by carters.

[4] The highest rate must be paid to at least 60 per cent of the workers, the second highest to not more than 25 per cent and the lowest to not more than 15 per cent.

[5] Except in establishments such as hotels which must provide a 24-hour service to the public, and in industrial and commercial establishments where the other employees are subject to longer work-weeks.

[6] First rate applies to workers with at least one year's experience, second to those with less experience.

[7] Drivers for industrial and commercial establishments where transport is only an accessory, and employees including cooks who serve meals in such establishments which are not principally hotels or restaurants, are covered by the provisions relating to such establishments. Garage employees who sell automobiles, gas, oil, etc., are subject to the provision for retail stores (industrial and commercial establishments).

[8] Twelve cents if messenger provides his bicycle. Rates apply to normal work-week of establishment employing them.

[9] Rates for Zone II apply to hotels in Zones III and IV with 50 or more bedrooms. In the winter, however, if some of the rooms are closed so that not more than 50 are available, the lower rates may be paid. Hotels in Thetford Mines are to be considered as in Zone III.

[10] Weekly rates of $9, $7.50, $7 and $6 according to the Zone are also prescribed.

Employees, n.e.s.[17]	25	25	18	13

11 An additional $15 per month is payable in all Zones if heated living quarters are not provided.
12 See also order for Verdun teachers (1940 Report, p. 160).
13 If employed for less than 20 hours per week, 50 cents per hour.
14 Applies only to operators not under employer's direct control. Others are to be paid at the rates for industrial and commercial establishments.
15 Double rates on Sunday.
16 Half the employees are to be paid one rate and half the other.
17 Fifty-four hour week in Zones I and II; 60-hour week in Zones III and IV.

[24] Rates apply to a 54-hour week, except for projectionists for whom they apply to 48 hours, caretakers for whom they apply to 60 hours per week and 10 per day, and managers for whom there is no regular work-week.

[25] Fifty-four hours from the beginning of the week which includes May 1 until the end of the week which includes December 1; 48 hours at any other time.

[26] Seventy-five per cent are to be paid the higher rate and 25 per cent the lower.

[27] Rates are also set for chauffeurs working on a commission basis. Montreal: 35 per cent of gross receipts up to $20 per week and 40 per cent of gross receipts over $20 for day work; for night work, the same percentages of receipts up to and over $35; the minimum for both day and night work is $11 for a week of 66 hours or less. Quebec and Levis: 15 per cent plus 10 cents per hour.

Manitoba

As far as the orders under the Minimum Wage Act are concerned, the summary given on pp. 169-171 of the 1940 Report is still valid except that two new orders, replacing those previously in effect, have been issued for retail and wholesale stores (excluding department stores and mail order houses) and for hotels, restaurants, clubs, etc. In stores the minimum rates for full-time experienced employees are unchanged, but the learning period of inexperienced workers was reduced effective June 26, 1941, from 16 to 12 weeks and the initial rate raised by $1. Moreover, for the first time rates were set specifically for delivery and messenger boys. For hotels and restaurants the geographic classification of the Province was changed and the rates of all classes in these work-places were raised as from June 13, 1942, with the approval of the Mani-

toba Regional War Labour Board. No special rates are fixed in either order for young persons under 18. The minimum rates now in effect in these two classes of establishments are indicated in the accompanying table.

As before, overtime must be paid in stores at the rate of 5 cents per hour extra for hours in excess of nine per day (10½ on Saturdays) and 48 per week. In hotels and restaurants in the Greater Winnipeg Water District and the other specified towns and cities overtime is now payable at 5 cents per hour extra for hours in excess of 48 per week, while in the rest of the Province hours may not exceed 52 per week. Part-time workers in stores working less than 16 hours in any week are now to be paid 30 cents per hour rather than, as formerly, the rate for full-time experienced workers, calculated on an hourly basis (25 cents).

In shops the deduction permitted for meals remains at 25 cents per meal. In hotels and restaurants, deductions of $2.50 per week for lodging and $4 for 21 meals are still permitted and an additional provision allows 20 cents to be deducted for single meals.

[1] This table is supplementary to that on p. 171 of the 1940 Report and supersedes any inconsistent parts of it.

Fair Wages

Schedules under the Fair Wage Act setting wage rates for workers employed on public works and certain private works of construction are issued annually. The 1940 schedule, which appears on pp. 172, 173 of the 1940 Report, was replaced by a new one which came into effect on May 5, 1941, and this in turn was replaced as from June 1, 1942. The 1941 and 1942 schedules appear below. It is declared that increases made in the 1942 schedule are to be construed as a cost-of-living bonus. The 1942 schedule was the first one in which different maximum hours were prescribed for each of the two zones into which the Province is divided.

The Fair Wage Act applies to "any public work. . . for the execution of which a contract . . . has been entered into between the Minister of Public Works and an employer." The schedule must also be observed by employers engaged in Manitoba on Dominion Government contracts for the construction of public works, including highway, road, bridge or drainage construction works, if the provincial wage schedule is higher than the rates specified in the contract. Private works to which the Act applies include the construction, repair or demolition of any building or construction work within the Greater Winnipeg Water District. They also include any such work in a city or town of over 2,000 inhabitants or in any portion of the Province to which the Lieutenant-Governor in Council may extend the Act, provided that the total cost for such work, irrespective of the number of contracts made, exceeds $100. They do not include normal repair or maintenance work done by a regular maintenance staff.

18. Operating engineers and firemen on construction—						
Class A: Engineers in charge of hoisting engines of three drums or more operating any type of machine, or operating trenching machines, clamshells or orange peels, regardless of capacity, or operating steam shovels or draglines of one yard capacity or over, or operating drop hammer pile drivers; in all cases irrespective of motive power	1.00	1.05	.80	.85	48	50
Class B: Engineers in charge of hoisting engines having only two drums or of single drum, used in handling building material, or steam shovels and draglines not specified in "A"; irrespective of motive power	.95	1.00	.75	.80	48	50
Class C: Engineers in charge of any steam operated machine not specified in "A" or "B"; or in charge of a steam boiler if its operation necessitates a licensed engineer under Steam-Boiler Act; or air compressor delivering air for the operation of riveting guns on steel erection work, or pumps in caissons, or concrete mixers of over ½ yard capacity; irrespective of motive power	.85	.90	.70	.75	48	50
Class D: Men firing boilers of machines classified in "A", "B" or "C", or assisting engineers in charge of same	.60	.65	.50	.55	48	50
Class E: Operators of gas or electric engines for machines not specified in "A", "B" or "C", of a type usually operated by skilled labourers	.50	.55	.40	.45	48	50
19. Painters, decorators, paper-hangers and glaziers	.75	.80	.70	.75	44	50
20. Plasterers	1.15	1.20	1.00	1.05	44	50
Helpers (continuously employed at mixing and tempering material, including the making of putty and operation of machinery)	.52½	.57½	.45	.50	48	54

[1] In 1941 these hours also applied to the rest of the province outside the 30-mile radius. [2] Subject to existing agreements between Builders' Exchange and Bricklayers' Union or Carpenters' Union, Local 343. [3] In 1941 rates were also set for helpers attending on or at scaffold: 45 cents in Area A, 40 cents in Area B. [4] In 1941 rates for carpenters' apprentices between ages of 17 and 24 indentured for 4-year period were 30 cents per hour for first 6 months with 5 cent increase every 6 months up to and including seventh period, totalling 3½ years, and 10 cent increase for last 6 months, making the rate 70 cents per hour. In 1942 the same rates are prescribed for electrical apprentices but initial rate for carpenters' apprentices has been raised to 35 cents.

[5] All men assigned to help tradesmen.

Overtime:—

Time worked in excess of the maximum hours as stipulated in the schedule shall be paid at the rate of time and one-half, including Saturday afternoon. All hours worked on Sunday to be paid at the rate of double time, except in cases of emergency when time and one-half shall be paid.[7]

Rule:—

All men hired in Winnipeg to go into the country to work on buildings shall be paid the City schedule rate, except where other definite agreements are made.

PUBLIC ROAD AND BRIDGE WORKS

The following rates and hours applied in 1941 and 1942, on "public works" outside of the Greater Winnipeg Water District Area in all parts of Manitoba for highway, road, bridge or drainage construction work where a contract had been entered into by the Honourable Minister of Public Works:

Occupation	Minimum per hour		Maximum hours per week	
	1941	1942	1941	1942
Teamsters	.35	.40	48	54
Labourers	.35	.40	48	54
Teamsters and two-horse team	.60	.60	48	54
Teamsters and four-horse team	.85	.85	48	54
Grader and tractor operators (excepting permanent municipal employees)	.60	.65	48	54
Truck drivers (regardless of basis for payment of truck)	.45	.50	48	54
Truck only—				
When truck is hauling not more than 1 cubic yard	.55	.55	.....	.....
For each additional 1/10 cubic yard load	.04½	.04½	.....	.....
Timber men (timber work where use of hammers, saws, axes and augers only are required)	.55	.60	48	48

[1] In 1941 these hours also applied to the rest of the province outside the 30-mile radius. In 1941 rates were also set for helpers attending on or at scaffold: 45 cents in Area A, 40 cents in Area B. [5] All men assigned to help tradesmen. [6] In 1941 a rate of 52½ cents for a 44-hour week was set throughout the province for Reinforcing Steel Rodmen when exclusively hired for or occupied on the work of bending, placing, tieing and similar skilled work in connection with reinforcing steel work. [7] In 1941 special provisions regarding Saturday and Sunday were not in effect.

Saskatchewan

The provisions of the orders under the Minimum Wage Act as they were at the end of 1940 are summarized on pp. 174-75 of the 1940 Report. Since October 1, 1941, the two orders relating to certain specified towns have applied also to the town of Humboldt and a five-mile radius. There is a new order for lumbering and allied work and minor amendments have been made in the six orders relating to cities.

Effective January 19, 1942, a minimum rate was established for the first time for workers in lumbering, logging, saw mills, shingle mills, lath mills, the manufacture of railway ties, telephone poles and fence posts and the production of pulpwood, cordwood, boxwood, shingle bolts, shim wood and veneer wood. Such workers must receive at least 30 cents per hour and not more than 85 cents may be deducted from their wages for a day's board and lodging.

The six orders relating to cities were reissued during the course of 1941 but there were no changes except in regard to the coverage of three of the orders and the provisions for inexperienced workers in five of them. The factory order now covers, in addition to the establishments already mentioned, paint shops and plumbing and tinsmithing shops. The order for beauty parlours and barber shops has been extended to include beauty and barber schools, and that for theatres and dance halls now also covers bowling alleys, billiard halls, skating and curling rinks, shooting galleries and all other establishments operating games of skill.

The learning period has been reduced and the minimum rates thereby in effect increased for all inexperienced workers in factories, stores, barber and beauty shops and schools, hotels, restaurants and refreshment rooms, and the offices attached to warehousing and cartage establishments. In all these workplaces but hotels and restaurants the reduction is from 18 to 12 months. Under the superseded orders there were three ascending rates for learners, each rate applying to a six months' period. These rates are indicated in the table on p. 174 of the 1940 Report. Under the new orders the same rates are in effect, but the two lowest now apply to successive periods of three months each with the highest applying to a final period of six months. In hotels, restaurants and refreshment rooms the learning period is reduced from 12 to nine months. The rates, which were formerly $8 and $10 per week for two successive six months' periods, are now $9 per week for the first three months and $10 for the following six months. There have been no special provisions regarding learners in theatres and amusement places, while for warehouses, etc., apart from the offices, the provisions remain unchanged.

In all the orders where the learning period has been reduced, except in that relating to barber and beauty shops, the number of learners permitted has been raised from 25 to 33⅓ per cent of the total number of workers. In barber shops and beauty parlours, as before, one inexperienced worker or one indentured apprentice is permitted for every experienced worker in all classes of employment.

Alberta

The situation at the end of 1940 was summarized on pp. 176-178 of the 1940 Report. Since then minimum rates have been set for the first time for several classes of workers, a number of existing orders have been revised and a limit has been placed on the deductions permitted for board and lodging from the wages of women covered by existing orders.

Orders came into effect for the first time for the following classes of workers on the dates mentioned: men and women in hotels in places of less than 600 inhabitants, on March 2 and April 30, 1941; men and women in canneries, on July 15 and June 30, 1942; and women employed in greenhouses, on June 30, 1942. The rates fixed by these orders for full-time workers are indicated on the accompanying table.

In canneries and greenhouses the same minimum hourly rate applies to part-time workers and full-time workers. In hotels in villages the part-time rates are 25 cents per hour for women and 40 cents for men. In all cases workers must be paid for at least four hours every time they are called for duty.

The women workers to whom these rates apply, like those governed by other orders for women, must be paid time and one-half for hours in excess of nine per day or 48 per week. In hotels in villages the rate for men applies to a six-day week and hours over nine per day must be paid on a pro rata basis. Men in canneries must receive time and one-half for hours over 10 per day or 54 per week.

The existing order for women in restaurants was re-issued on April 30, 1941, and it is now declared not to apply to hotels in places of less than 600 if the dining-room is not open to the public for more than five hours a day. Its coverage has been extended, however, for it now applies to the "hotel and restaurant industry," by which is meant not only public eating-places (to which the application of the superseded order was confined) but also any place furnishing lodging for a charge except private homes with not more than six

boarders. Its provisions regarding wages, etc., are the same as in the old order for restaurants.

The order for female office workers was re-issued on April 30, 1941, but the provisions of the new order are the same as those of the old except as regards part-time employees. These must now be paid 30 cents per hour with a minimum of $1.20 for each call.

The following are the maximum deductions which may now be made for board and lodging from the wages of female workers covered by the Minimum Wage Act: $2.50 for 18 meals in a week of seven days; $3 for 21 meals and $1.50 for lodging in a week of seven days; and 15 cents for single meals.

Under the Male Minimum Wage Act the order for delivery and messenger boys was re-issued on April 23, 1941, that for workers in saw-mills, other wood working establishments and logging in rural districts on October 1, 1941, and that for coal-miners in the Edmonton district on October 31, 1941. The rates for coal miners remain unchanged but those for delivery boys paid by the day or hour and for workers in saw-mills, etc., have been raised. The new rates for delivery boys and saw-mill workers are indicated on the accompanying table.

Apart from wage rates the changes effected by the new orders are as follows. The order relating to delivery boys has been extended to cover all such workers rather than, as before, merely those in the retail trade. In saw mills, etc., if board and lodging are furnished as part payment of wages, they are to be valued at $1 per day, while for single meals, as before, 35 cents may be deducted. In coal mines in the Edmonton district the daily hours after which time and one-half must be paid to workers above ground has been raised from eight to nine.

British Columbia

The summary on pp. 179-182 of the 1940 Report is still valid, with the following exceptions.

A new order relating to women in laundries came into effect on March 10, 1941, replacing three orders which had been in force since 1919. The rates which are now set on an hourly rather than a weekly basis, are 31 cents for experienced employees and 21 to 27½ cents for learners during their first year. All workers must be paid for at least four hours (three hours on Saturday) on any day on which they are called for duty.

The influx of women into the road transport industry, excluding passenger transport, which has taken place as a result of the war, led to the passage of a special order governing female employees in this industry. This order, which came into effect on August 18, 1941, extended to women the same provisions relating to wages and other conditions as already applied to men.

The wages and other conditions governing painting, decorating and paper-hanging in Vancouver and suburbs were extended, effective June 2, 1941, to the southern part of Vancouver Island.

New orders replacing existing ones came into force on June 16, 1941, and July 20, 1942, for men in the shingle and baking industries. The following are the changes made by these orders. In the shingle industry piece-work rates were established in addition to the minimum hourly rate of 40 cents. These are 25 cents per square for sawing No. 1 shingles, 20 cents for other shingles and 15 cents for packing. In the baking industry, in addition to the various rates for workers 18 years of age and over, a rate of 20 cents per hour is now in effect for those under 18. Moreover, it is now provided that not more than 15 per cent of the male employees in any establishment may receive less than 40 cents per hour, the rate for workers 21 and over.

Wages and Hours of Labour Under Quebec Collective Agreement Act and Schedules of Wages and Hours under Industrial Standards Acts etc., in Certain Provinces

In certain provinces, legislation provides that the wage rates and hours of labour agreed upon by representatives of employers and workers in a trade or industry for a locality, district or the whole province may be made obligatory on all employers and employees concerned by Order in Council on the recommendation of the Minister in charge of the administration of labour legislation. The changes in such rates of wages and hours of labour during 1941 are noted below and are applicable to both male and female workers unless otherwise stated.

Summaries of this legislation in each province and of the agreements and schedules in effect at the end of the year 1940 were given in last year's bulletin: "Wages and Hours of Labour in Canada, 1929, 1939 and 1940." These remained in effect during 1941, with the exception of the changes here noted.

NOVA SCOTIA

Industrial Standards Act

Construction

Five new schedules were made in 1941 for building trades at Halifax and Dartmouth (Labour Gazette, June, 1941, page 707), all of which provided for a 44 hour week. For bricklayers, masons, and tilesetters the hourly wage rate stipulated was $1.10, with all overtime as well as all work on Sundays and holidays at double time; for carpenters, 80 cents, with overtime at time and one half for the first four hours and double time thereafter and also for all work on Sundays and holidays; for electrical workers, $1, with overtime pay under the same conditions as for carpenters; for plasterers, 90 cents, with overtime pay as for carpenters; sheet metal workers, 75 cents, with overtime at time and one half until 10 p.m. and double time thereafter and for all work on Sundays and holidays. No change was made in the plumbers and steamfitters' 1940 schedule, which with the above schedules runs from year to year until cancelled or changed.

NEW BRUNSWICK

Industrial Standards Act

This Act was amended in 1941, to include the construction, repair, etc. of motor vehicles (Labour Gazette, August, 1941, page 956).

Construction

New schedules for all trades at Saint John shown in the 1940 report were made in 1941 (all to expire December 31, 1941) with no change in hours and overtime conditions (Labour Gazette, February, 1941, page 185, and May, 1941, page 594). The hourly wage rates for bricklayers, masons, plasterers and tilesetters (ceramic and clay tile) were unchanged at 90 cents, and for tilesetters (asphalt and composition floor and wall tile), terrazzo layers and cement finishers at 70 cents; for carpenters the rate was changed to 70 cents, painters 60 cents, spray painters and painters painting structural steel 70 cents; plumbers and steamfitters 80 cents. A schedule was made for carpenters at Moncton with a 48 hour week, a minimum wage rate of 50 cents per hour and overtime payable at time and one half for first four hours and double time thereafter, as also for all work on Sundays and holidays (Labour Gazette, December, 1941, page 1574).

QUEBEC

Collective Agreement Act

Manufacturing: Vegetable Foods

Baking Industry.—A new agreement for *Quebec City and district* makes no change in hours and overtime conditions. Minimum weekly wage rates: in bread bakeries, foremen $24 in zone I, $19.55 in zone II, journeymen $21 in zone I, $17 in zone II; in cake, pastry and biscuit bakeries in both zones, 40 per cent of employees to be paid at least $17, a further 40 per cent at least $12, and the remaining 20 per cent at least $7; for wrappers, orders and sample clerks and other wholesale or retail store employees, 40 per cent to be paid at least $11, another 40 per cent at least $9 and the remaining 20 per cent at least $7.50; in delivery department, salesmen $16

in zone I, $14.40 in zone II, salesmen helper $7 in zone I, $6.30 in zone II, delivery man $14 in zone I, $12.60 in zone II (Labour Gazette, June, 1941, page 703). Granby—bakers $14 to $24, salesmen on commission a guaranteed minimum of $16 (Labour Gazette, November, 1941, page 1424). An amendment to the agreement at *Montreal* sets minimum rate for salesmen at $18, with no provision for commission on sales (Labour Gazette, February, 1941, page 183).

Manufacturing: Boots and Shoes

Shoe Manufacturing—The agreement covering this industry throughout the province was amended (Labour Gazette, February, 1941, page 183, January, 1942, page 110) to provide for a 10 per cent increase in the minimum wage rates for the general factory trades, and for adjustment of these minimum rates semi-annually by percentages corresponding to percentage changes in th cost-of-living.

Manufacturing: Other Fur and Leather Products, etc.

Fur Manufacturing Industry.—For the city of *Quebec*, amendments in 1941 (Labour Gazette, March, 1941, page 333, and December, page 1572) provide for a cost-of-living bonus of $3 per week for the minimum rates of $29 and over, of $2 for minimum rates of $19 to $28, and of $1 to operators and finishers. For the *retail industry in the Montreal District*, an amendment (Labour Gazette, December, 1941, page 1572) provides for a cost-of-living bonus of $2 per week to all skilled workers including apprentice cutters or trimmers, this bonus to be adjusted semi-annually with changes in the cost-of-living. It was stated that this amendment does not apply to employers of more than 50 persons, who are governed by Order in Council 8253.

Leather Tanning Industry, Province of Quebec.—This agreement was amended in 1941 (Labour Gazette, February, 1941, page 183, August, page 1008 and October, page 1313) to provide for an increase of 10 per cent in minimum hourly wage rates, as a war bonus and applies also to all employees governed by the agreement computed on wages in force at June 1, 1941.

Glove Manufacturing (Fine Gloves), Province of Quebec.—A new agreement was made in 1941 with increases in the piece rates for a few classes of workers. Later in the year an amendment was made granting a general increase of 10 per cent over piece rates in effect at October 1, 1941 (Labour Gazette, April, 1941, page 472, July, page 854, October, page 1314, and January, 1942, page 110).

Glove Manufacturing (Work Gloves), Province of Quebec.—The agreement for cutters was amended to make certain adjustments in the piece work rates. A later amendment increased the piece rates by 10 per cent from October 1, 1941 (Labour Gazette, March, 1941, page 333, and October, page 1314). For work glove cutters, similar amendments were made, with the same increase of 10 per cent from October 1, 1941 (Labour Gazette, March, 1941, page 333, October, page 1314, and Jan., 1942, page 110.

Manufacturing: Textiles and Clothing

Men's, Boys', Youths', Children's and Juveniles' Clothing Industry, (Coats, Suits, Etc.), Province of Quebec.—As noted in last year's Report, a 10 per cent increase in earnings (or minimum wage rates under certain conditions) was made effective December 4, 1939, in this industry except for the infants' and children's section. By an amendment to the agreement this 10 per cent was changed to 20 per cent from July 1, 1941, and an increase of 10 per cent was granted in the infants' and children's section of the industry (Labour Gazette, August, 1941, page 1008, and September, page 1159). This is called a war bonus.

Women's Cloak and Suit Industry, Province of Quebec.—By an amendment to this agreement (Labour Gazette, October, 1941, page 1314), a general increase of 12½ per cent on the minimum wage rates was made, with the same increase to all employees actually receiving wages in excess of the minimum rates, whether on a time or piecework basis.

Men's and Boys' Hat and Cap Industry, Province of Quebec.—This agreement was amended (Labour Gazette, October, 1941, page 1314) to provide for a 10 per cent increase in wages, making the minimum weekly wage rates for cutters $26.40, operators $24.20, blockers $19.14 and lining makers $15.95.

Women's and Children's Millinery Industry, Montreal.—Minimum weekly wage rates were increased during 1941 by an amendment to the agreement (Labour Gazette, June, 1941, page 704, and February, 1942, page 234) to $36 for hand blockers, $32.50 for blockers, straw operators, fabric operators and cutters, $22.40 for drapers, $19.20 for trimmer-drapers, $17 for trimmers. All other employees of the industry mentioned in the above classifications were also granted a 5 per cent increase.

Embroidery Industry, Montreal.—An agreement for this industry (Labour Gazette, March, 1941, page 333) provides for a 44 hour week, with overtime limited to 8 hours per week without special permit. Minimum weekly wage rates are: Bonnaz operators

$37.50, pleaters and pattern makers, $22, stampers and special machine operators $16, crochet beaders $15, hand embroidery workers, floor help, pleater's assistant and covered button and buckle makers $12.50.

Manufacturing: Pulp, Paper and Paper Products

Paper Box (Corrugated Paper), Province of Quebec.—Amendments to this agreement (Labour Gazette, June, 1941, page 704, and September, 1941, page 1159) provide for a 55 hour week and for increases of 5 cents per hour for all classes of male employees (those who have had six months' experience) and the average hourly rate for male employees is increased to 38 cents. The rates for beginners in their first six months are unchanged.

Paper Box (Uncorrugated Paper), Province of Quebec.—A number of changes were made in this agreement (Labour Gazette, April, 1941, page 473, May, page 593, June, page 704, October, page 1314, and December, page 1572). Hours are 55 per week. The minimum hourly wage rates for male employees are increased by 5 cents per hour for foremen and machinists, by 3 cents per hour for scorers, die makers and stockers, by one cent for punch operators and "other help", by 2 cents for all other classes except apprentice scorers whose rates are unchanged, stationary enginemen are added at 49½ cents in zone I, 39 cents in zone II; the average minimum wage for male employees, including apprentices to be at least 33 cents in zone I, 31 cents in zone II. A special section was added to the agreement governing hours and wage rates in the printing department of the industry.

Manufacturing: Printing and Publishing

Printing Trades, Montreal and District.—Amendments to this agreement were noted in the Labour Gazette, February, 1941, page 183, April, page 473, May, page 593, June, page 704, December, page 1572. Hours are now 44 per week in zone I. Minimum hourly wage rates are increased by 2 cents per hour for the higher paid classes and by one cent for the lower paid classes. Rural weekly newspapers are now included, with wage rates from 8 cents per hour less than the regular rates in the same zone for the higher paid classes to one cent per hour less for apprentices.

Manufacturing: Miscellaneous Wood Products

Furniture Manufacturing Industry, Province of Quebec.—Minimum hourly wage rates were changed in 1941 (Labour Gazette, November, 1941, page 1424, and December, page 1572), as follows: in zone I, a minimum of 20 cents (an increase of 2 cents) and a minimum average of 43½ cents (an increase of 2 cents); in zone II, a minimum of 16½ cents (an increase of 1½ cents) and a minimum average of 38 cents (an increase of 3½ cents); in zone III, a minimum of 13½ cents (an increase of 1½ cents) and a minimum average of 32 cents (an increase of 3 cents). A cost-of-living bonus to be paid to every employee for every hour worked, which is the equivalent of 10 per cent of his average hourly earnings during May, June and July, 1941.

Sawing Operations, Sash, Door, Box, Casket and other Wood Products Manufacturing, Jonquiere and Kenogami.—Amendments to this agreement were published in the Labour Gazette, April, 1941, page 473, and October, page 1315. On November 15 (Labour Gazette, December, page 1572) the Orders in Council making this agreement obligatory and all amendments were repealed.

Manufacturing: Metal Products

Ornamental Iron and Bronze Industry, Montreal and District.—A new agreement for this industry (Labour Gazette, November, 1941, page 1424) provides for a 44 hour week; overtime at time and one half until midnight and double time thereafter and for all work on Sundays and seven holidays. Minimum hourly wage rates are: mechanics 78 cents, fitters 68 cents, helpers (shop or field) 58 cents, erectors 78 cents. (These are increases of 8 cents per hour over the previous rates.)

Manufacturing: Non-Metallic Minerals, etc.

Building Materials Industry, Province of Quebec.—An amendment to this agreement (Labour Gazette, September, 1941, page 1159) increases the minimum wage rates for all classes in the *Granite Industry* by 5 cents per hour.

Construction

As changes were made in most of the agreements in 1941, the wage rates for certain trades in all districts are included in the accompanying table.

Trade

Retail Stores, Quebec.—Amendments to this agreement (Labour Gazette, February, 1941, page 184, August, page 1013, and November, page 1425) include provision for a bonus equivalent to 10 per cent of the minimum wage rates of the agreement.

Hardware and Paint Stores, Quebec.—This agreement was amended (Labour Gazette, June, 1941, page 705). Overtime at time and one half is payable only after 57 hours' work in a week; work on any holiday, at double time. One week's vacation with pay after two years' service (three years' experience). The minimum wage rates were raised approximately 5 per cent except for beginners whose rates are unchanged.

Dairy Employees, Quebec City.—This agreement was amended (Labour Gazette, April, 1941, page 473), increasing weekly wage rates to: tester and foreman $25, tester (not foreman) $18, "employee engaged in the fabrication" $18, general employee $15, shipper $18, retail salesmen or wholesale and retail salesmen $19, helper on ice cream delivery $12, helper on any other delivery $8; deliveryman $18, artisan $20 during first three months and $25 thereafter; employees (other than regular salesmen) working less than 40 hours in any week to be paid 40 cents per hour for time worked.

Retail Stores, Coaticook.—A new agreement for these employees (Labour Gazette, September, 1941, page 1162) stipulates a 60 hour week for male employees, 54 hours for female employees, with overtime at time and one half. Minimum weekly wage rates are: for 25 per cent of employees $18 per week of 60 hours, a further 25 per cent $15, another 25 per cent $12 and the remaining 25 per cent $8.

(j) Repair work not exceeding $1,000 to small properties in city of Hull and within 10 miles of it; also all contracts over $20,000 in the rest of the district. *(k)* Including hoisting, mixing, compressor and pump operations, but not including steam shovel and crane operations. *(l)* And contracts of $10,000 in rest of district. *(m)* Counties of Maskinongé, St. Maurice, Laviolette, Champlain and Three Rivers. *(n)* Judicial district of Quebec and counties of: Beauce, Dorchester, Megantic, Bellechasse, Montmagny, L'Islet, Kamouraska, Temiscouata, Rivière-du-Loup, Rimouski and Matane. *(o)* Sherbrooke, Compton, Frontenac, Stanstead, Shefford, Brome, Missisquoi, Richmond, Wolfe, Drummond and Arthabaska counties. *(p)* 55 cents in Cowansville and Farnham. *(q)* 40 cents in Victoriaville. *(r)* 35 cents in Victoriaville. *(s)* Contracts of less than $5,000 in county of Saguenay (except Baie Comeau and within 15 miles of it) are exempted.

Service: Public Administration

Municipal Employees, St. Joseph D'Alma.—An amendment (Labour Gazette, April, 1941, page 473) increases the monthly salary of foreman of waterworks department to $125, chief electrician to $125; for second electrician the hourly rate to 45 cents. Provision is made for a 44 hour week in the Accounts Department, with weekly salaries of $45 for secretary-treasurer, $37.50 for assistant secretary-treasurer, $30 for collectors and $20 for clerk bookkeeper.

Municipal Employees, Quebec City.—For outside services, a new agreement (Labour Gazette, July, page 854) increases hourly wage rates for certain trades from 3 to 10 cents. For policemen (Labour Gazette, July, 1941, page 854), weekly wage rates were increased to $21 per week during first year, $23 during second year, $25 during third year, $27 during fourth year and $28 during fifth year. For firefighters (Labour Gazette, July, 1941, page 854), weekly wage rates were increased to $21 during first year, $23 second year, $25 third year, $27 fourth year, $28 fifth year, lieutenants $30, captains $32.

Service: Custom and Repair

Garages and Service Stations, Montreal.—The previous agreement was extended as noted in the Labour Gazette, April, 1941, page 474, June, page 706, and July, page 854, until a new agreement was made (Labour Gazette, August, 1941, page 1013). This new agreement provided for higher minimum wage rates: journeymen wheelwrights, machinists, electricians, mechanics, joiners, glaziers, painters, upholstery cleaners and dyers, testers, 60 cents for first class, 55 cents for second class, 45 cents for third class; body worker, upholsterer, radiator repairer, welder, black-

smith, 66 cents for first class, 55 cents for second class and 45 cents for third class; service men or demolisher 28 cents.

Service: Business and Personal

BARBERS AND HAIRDRESSERS.—Changes were made in most of the agreements in 1941, and the following table shows wage rates under all agreements as in effect at the end of the year.

MINIMUM WEEKLY WAGE RATES FOR BARBERS AND HAIRDRESSERS

Locality	Barbers		Female Hairdressers

(a) Counties of Chicoutimi and Lake St. John and towns of Roberval, Dolbeau and Mistassini.

(b) Journeymen barbers $12 during first year, $15 with two years' experience, plus 10 per cent of gross receipts, plus an extra 15 per cent on gross receipts in excess of $20.

(c) Or $20 without commission.

(d) And Cap de la Madeleine, Shawinigan Falls, Grand Mère and Louiseville.

(e) Commission of 70 per cent of receipts over $20.

(f) Commission of 60 per cent of receipts over $25.

(g) 65 per cent of receipts over this amount.

(h) Plus a commission of 10 per cent of gross receipts excess of $15.

(i) $8 in Sorel.

ONTARIO

Industrial Standards Act

Manufacturing: Textiles and Clothing

WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF ONTARIO.—Effective from October 14, 1941, increases of 14 per cent were added to the basic wage rates of this schedule (LABOUR GAZETTE, November, 1941, page 1427).

Manufacturing: Miscellaneous Wood Products

HARD FURNITURE INDUSTRY, PROVINCE OF ONTARIO.—A new schedule was made for this industry (LABOUR GAZETTE, November, 1941, page 1427, and February, 1942, page 234) which includes the manufacture or fabrication of all wood products commonly known as furniture for houses, offices, schools, churches, theatres, institutions and public buildings, and also radio cabinets and wood frames for upholstered furniture. The province is divided into two zones: zone B comprises the city of Toronto, ten counties and parts of five other counties, in which zone are situated the cities of London, Woodstock, Kitchener, Guelph, Hamilton, St. Thomas and Stratford; zone A is the rest of the province. Hours are 47 per week, with overtime at time and one-quarter.

Wages: for male employees of 21 years of age or more and with at least 4 years' experience in the industry (Class A), the average rate of wages in each plant in zone I shall be 47 cents and the minimum rate 40 cents; in the rest of the province 45 and 38 cents respectively. For male employees with less than 4 years' experience in the industry and who are under 21 years of age or were under 21 years when they commenced work in the industry and all female employees (Class B), the minimum rates are 19 cents per hour during first year of employment in the industry, 23 cents during second year, 26 cents during third year and 29 cents during fourth year. From December 16, 1941, a previous cost-of-living bonus was increased to 7 cents per hour for Class A employees and to 14 per cent of the minimum rates for Class B employees.

Construction

Changes in 1941 in schedules for building trades are: at Cornwall, the carpenters' wage rate was increased to 75 cents per hour, with a 44 hour week and overtime at time and one-half for first three hours and double time thereafter; at Ottawa carpenters' rate was raised to 90 cents, with a 44 hour week and overtime at time and one-half for first four

hours and double time thereafter; for electrical workers at Ottawa, the rate was increased to 85 cents (90 cents after January 1, 1942) and helper at 50 cents, a 40 hour week, with overtime at time and one-half; for plasterers at Ottawa, the rate was increased to $1 per hour, with a 44 hour week and overtime at time and one-half until midnight on Mondays to Fridays, and until 5 p.m. on Saturday, all other overtime at double time. A schedule for electrical workers at London provides for a minmum wage rate of $1 per hour, a 44 hour week and overtime at time and one-half until 10 p.m. on Mondays to Fridays and until 6 p.m. on Saturdays, with double time for all other overtime.

Transportation and Public Utilities: Local Transportation

Taxi Drivers, Toronto.—An amendment to this schedule (Labour Gazette, April, 1941, page 475) makes the minimum wage rates either (*a*) $14 per week plus 35 cents for each hour of overtime; or (*b*) $1 for first three consecutive hours on duty (or for any shorter period if the employee is not kept on duty for three consecutive hours) plus 30 cents for each additional consecutive hour on duty until the employee has been on duty 11 hours, plus 35 cents for each hour of overtime. If 25 per cent of the fares earned by a driver in any calendar week exceeds the above minimum wages, then he shall be paid for that week at least 25 per cent of fares earned. Despatchers to be paid at least $15 per week and 35 cents per hour for overtime (Labour Gazette, April, 1941, page 474).

Service: Business and Personal

Barbers.—A new schedule for barbers at Sault Ste. Marie provides for a minimum weekly wage rate of $25 or $18 per week plus 50 per cent of proceeds in excess of $28 from the work of the employee plus 10 per cent of such proceeds in excess of $30.

For Woodstock, a new schedule provides for a minimum rate of $18 per week or $12.50 per week plus 60 per cent of proceeds in excess of $19 from the work of the employee.

MANITOBA

Fair Wage Act (Part II)

This section of the Act was amended to bring the baking industry within its scope (Labour Gazette, February, 1941, page 137).

Manufacturing: Vegetable Foods

Bakers, Winnipeg and District.—A schedule for bakers in Winnipeg and District was summarized in the Labour Gazette, May, 1941, page 595, and provides for a 50 hour week for all employees except boys under 18 years, hand wrappers (female) and inside sales force for whom the work week is 48 hours; overtime at time and one-quarter. Minimum weekly wage rates: dough man $26, assistant dough man $23, oven man $24, divider man $21, table hand $22, machine man $20, bakers' helpers $15 to $18, boys $12 for first six months, machine wrappers $20, hand wrappers (female) from $12 during first year to $15 during third year, shippers $20 to $25, outside salesmen $20.

SASKATCHEWAN

Industrial Standards Act

Construction

One schedule, that of carpenters at Regina, was cancelled June 27, 1941. Another schedule, that of plumbers at Saskatoon, was amended in November, 1941, to change the regular weekly hours from a 40 to a 44-hour week (Labour Gazette, December, 1941, page 1575).

Transportation and Public Utilities: Local Transportation

Taxi Drivers.—A schedule was made binding for taxi drivers at Prince Albert (Labour Gazette, October, 1941, page 1317) setting a 10 hour day, a 60 hour week, with overtime at 25 cents per hour. Minimum weekly wage rates for full time work are 25 per cent of gross earnings of car driven by the employee, with a guarantee of $12 per week.

Trade

Coal and Wood Industry, Regina.—An amendment to this schedule (Labour Gazette, October, 1941, page 1318) fixes the 54-hour week from October to March inclusive, and the 49-hour week from April to September inclusive. A cost-of-living bonus of 13 per cent of the minimum wage rate is provided for.

Service: Custom and Repair

Shoemaking and Repairing.—A schedule was made for the city of Saskatoon (Labour Gazette, August, 1941, page 1014) which fixes a 52 hour week, with overtime and part time work at 40 cents per hour. Minimum weekly wage rates: journeymen $18, inexperienced employees $9 to $15, apprentices $5 and $7.

Service: Business and Personal

Barbers and Hairdressers.—New schedules were made for barbers at Humboldt providing for a 48-hour week and $13 per week plus a percentage on charges totalling more than a certain amount; a new one for hairdressers, etc. at Humboldt providing for a minimum of $13 per week and a 48 hour week. Changes in certain schedules for barbers: at Estevan, the minimum rate is increased to $15 per week plus bonus of a percentage on charges totalling a certain amount, and a 52 hour week; at Weyburn, to the minimum rate of $16 per week is also added a percentage on charges totalling a certain amount; at Regina, the same provision for a bonus was made and hours reduced to 51 per week. Charges in certain schedules for hairdressers provide for a bonus of a percentage on charges exceeding a certain amount at Weyburn and at Moose Jaw.

ALBERTA

Industrial Standards Act

Manufacturing: Vegetable Foods

Baking Industry.—A new schedule for bakers at Edmonton (Labour Gazette, August, 1941, page 1015), increases weekly wage rates of doughmen, ovenmen and bench hands to $27.50, shipper to $21.50, truckers to $21, wrappers (female) to $14, wrappers (male) to $17, experienced salesmen to $23. For Calgary, (Labour Gazette, April, 1941, page 475) a new schedule for bakers reduced the hours from 50 to 48 per week with no change in weekly wage rates. Bakery salesmen at Calgary have a schedule (Labour Gazette, December, 1941, page 1575) which provides for a 54 hour week for men, 48 for women, with overtime at time and one half and minimum weekly wage rates of $20 for salesmen (male or female) and service men (male or female) for first three months' experience and $23 thereafter.

Construction

Certain wage rates were increased in new schedules in 1941. At Edmonton, the hourly wage rate for carpenters was raised to 95 cents, for sheet metal workers to $1; and a new schedule for plasterers at Edmonton provides for a rate of $1.05 per hour and a 44 hour week. The rate for carpenters at Red Deer and Sylvan Lake was raised to 90 cents per hour, with a 44 hour week. At Lethbridge a wage rate of 90 cents per hour was fixed for carpenters, with a 44 hour week.

Service: Custom and Repair

Garage and Service Station Employees.—These employees at Edmonton secured a schedule in 1941 (Labour Gazette, October, 1941, page 1318). Hours are 54 per week, with overtime at time and one half and one week's annual vacation with pay. Minimum hourly wage rates are: first class mechanics 80 cents, second class mechanics 70 cents, non-mechanical service station employees $15 per week, washmen or greasemen 50 cents per hour or 40 per cent of the labour price quoted.

Service: Business and Personal

Barbers.—A schedule for Red Deer (Labour Gazette, May, 1941, page 595) provides for a 54 hour week, with overtime at 60 cents per hour; the minimum weekly wage rate for full time barbers is 60 per cent of total takings each week, with a guarantee of at least $15 per week.

Maximum Hours of Work as fixed by Legislation and Administrative Action

The situation at the end of 1940 is summarized on pp. 207-214 of the 1940 Report, and a general summary of the statutory provisions for mines, shops and factories which were in effect in July, 1942, is given in the table attached to this section. Details regarding the changes made since the end of 1940 are summarized below, page references being to the 1940 Report unless otherwise stated.

Some relaxation of statutory standards has been occasioned by the war. It was noted on p. 154 of the present Report that the Quebec provision limiting the hours of men to 72 per week has been omitted from the new general Order 4 under the Minimum Wage Act, and that the weekly rest day provision of this Order as well as the provisions of all special Orders limiting hours and requiring a weekly rest day have been declared not to apply to war industries. The hours of women and boys under 18, however, are still limited by the Industrial and Commercial Establishments Act (pp. 210, 211). At the same time, under an Order in Council of March 15, 1940, night work is now permitted for women and minors in war establishments, subject to the approval of the factories inspector. In Alberta, an Order of June 1, 1941, prohibited night work between 12 p.m. and 6 a.m. for all women governed by the Hours of Work Act, except hospital em-

ployees and telephone operators, but this Order was suspended for the duration of the war on September 9, 1941. Provisions relating to hours and night work for women have also been relaxed by administrative action for individual war establishments in some provinces.

In Alberta, the provision of the Hours of Work Act limiting the hours of men to 9 per day and 54 per week was relaxed due to the war for saw-mills on November 30, 1940, and for rolling mills on December 31, 1941. Hours up to 10 per day are now permitted in the former and up to 11 per day in the latter.

There have also been some changes, mainly in regard to seasonal industries, which are the result not of the war but of the special conditions in the industries themselves. It was noted in the 1940 Report (p. 208) that under the Alberta Hours of Work Act individual establishments may be exempted temporarily or permanently from the provisions of the Act. In November, 1938, cooks, cookees, bull cooks, night watchmen and barn bosses in logging, etc. were exempted for the winter of 1938-39 from the provisions limiting the hours of men to 9 and 54 (Sec. 5) and requiring a weekly rest day (Sec. 10). This exemption was repeated for the winters of 1939-40 and 1940-41, and in the spring of 1941 it was granted for the other months of the year as well. It now applies on a year-round basis.

In the spring of 1939 workers on irrigation projects were declared exempt from Sec. 5 for the summer months of that year. In 1940, cooks, cookees, bull cooks and barn bosses in construction camps where the work is seasonal were exempted from Sec. 10 for the summer, and in 1941 they were exempted from both Secs. 5 and 10 with the proviso added that the exemption applied only if wages exclusive of board and lodging amounted to $75 per month for cooks, $50 for cookees and bull cooks and $80 for barn bosses. These exemptions were repeated annually for both irrigation projects and construction camps, and in 1942 they were put in permanent form so that the workers mentioned are now exempt every year during the summer months. It was also provided in 1942 that workers on ferries would be exempt every summer from Secs. 5 and 10.

On the other hand, the hours of office workers in financial institutions were reduced, beginning April 1, 1941, below the maximum fixed by the Act. Women may not work more than 44 hours per week nor men more than 48. In one month each year, however, hours may amount to 196 for women and 208 for men, provided the daily limit is 9 and 10.

In 1941, provision was made in British Columbia to extend hours in placer mines and limestone quarries (p. 210) so as to enable the operators to take full advantage of the short season available. If a permit is obtained from a qualified officer of the Department of Mines, up to 10 hours per day may be worked in these places.

In 1941, hairdressing establishments in New Brunswick (p. 212) were brought within the scope of the Early Closing Act, which permits municipal councils to make by-laws fixing the hours for closing.

STATUTORY MAXIMUM HOURS OF WORK PER DAY OR WEEK IN MINES, FACTORIES AND SHOPS IN CANADA—JULY, 1942

—	N.S.	N.B.	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	B.C.	Yukon
